Oooops, Dick dangled his participle in public again. I warned him about
that but he doesn't listen.

```

Two years ago, disgusted that a usenet group devoted to Amateur Radio Policy
issues had degenerated into a clique of regulars endlessly arguing about
Morse Code, leaving no room for discussion of policy issues, I quit visiting
here.

A year later I checked back: Same thing.

Another year: Same thing...

Can anyone direct me to a usenet group where Amateur Radio Policy IS
discussed? Someplace where the discussion is not lost in the noise?

I'll lurk a few days, then give it another year, I suppose. I'm a real
optimist.

EXCEPT, Mexico does not subscribe to CEPT, and any operation without a
Mexican license is illegal and subject to equipment confiscation. Check with
the ARRL web page for licensing procedures.

>callsign such a big deal at Hq.?

FCC has been all over the map on vanity and club callsigns. For several years there have been complaints of "call collecting" by "clubs" whose only existence is on paper. Many of the calls thus collected are highly desirable 1X2s, and the FCC has cancelled some of them when the holders could not prove that a real club actually existed. Trouble is, this makes it tough for legitimate operations like that one.

Given the low levels of enforcement, I don't see how.

But perhaps it's not the TEST but the USE of code that matters. Note that there

haven't been ANY NALs for hams using Morse on the air.....

Did the public input really matter? Way way back in late 1997, when I first
came online, there were posts saying the FCC was going to 2 or 3 classes of
license and 5 wpm for HF. Said it was "a done deal" and "a sure thing". I
pooh-poohed such stuff right here way back then - but those posters were right
on the money in EVERY detail. This was way before any NPRM, ARRL proposal or
NCI proposal or any of that stuff.

Maybe I'll go dig up those ancient posts.

If we followed that philosophy, we'd still have a nationwide 55 mph speed limit
- or lower! Popular opinion is what changed the limit.

But the regulation (55) was NOT kept on by
any stretch of it being logical or truly justified.
```

The origin of 55 was a gasoline shortage. After the shortage ended, the feds didn't scrap the 55 because the safety nazis said the concurrant lower highway fatalities had to be because of the lower speed.   They didn't want to hear that a gross decrease in miles driven had anything to do with it.

In the end the 55 limit was ended by BOTH popular opinion AND rational judgement.

Cheers,
Bill K2UNK

This is exactly the kind of attitude that will kill off amateur radio. We'll
see who the "Dumbo of the Month" when large chunks of amateur spectrum get
auctioned off to the highest bidder.

  Of course, symptoms of severe, debilitating cluelessness. Permeats CB,
freebanding, and some easy classes of ham radio these days.

I, for one, ahve never been able to understand the animosity
> taht exists between CBers and hams. There's good and bad in both, but to say
> that one is better than the other is nothing but elitism. That attitude has
> killed many good things.

 Your basic thought is not inaccurate, but it is clear that you have no
idea why. Your accuracy is purely accidental. CB is CB. Ham Radio is Ham
Radio. The two are totally different entities, with no more in common
that the fact that both are radio. And as I said, no one is really
surprised that neither you nor Kim can detect the difference.

People with low self esteem condemn all members some other group. They have to tear someone else down below their miserable level of mediocrity before they can feel good about themselves. Tearing other people down is like being a drug addict. It's a temporary fix that actually lowers self-esteem in the long run. The more successful they are at tearing other people down, the more miserable and frantic they become.

Tell you what, clown - if you represent what that spectrum is being
reserved for., they can GIVE it away, no auction needed.

OOOOOOOOOOOOOOH the Ultimate Weapon or Holy Hand Grenade (take your pick) has been released or heaved or something. Elitism! Isms out the waz. And I should now shrivel up and shrink away like a dandelion zapped with 2-4-D. In your dreams, Brayant.

The animosity is fairly simple: those who got for free want more for free and those who earned it see no good reason to suffer freeloaders. Being hungry does not entitle one to crash the Eagles Picnic; in fact being human and alive confers no rights whatsoever -- non humans maybe.

Accidents of birth are one thing, accidents of privlege another, but achievement is no accident. One who has earned it owes precisely nothing to those who have not, in theory, in practice, or any other way no matter how much whining he hears. For one who has acheived in an area to say he is 'better' may not be politically correct but if he does not think it he is an idiot and if he does not say it he is a liar. All he risks is being unpopular among those who could not carry his shorts for saying out loud what everyone already knows.

Dick N�BK

To list the radio services/groups I am knowledgeable of, that would be: ham, CB, FRS, GMRS, MURS. If there are other such radio services, I believe they would be within the scope also.

>
> As you know, the ARRL bylaws currently limit voting membership to

I cannot think of when it was, though I believe it was late last Fall, that the ARRL itself announced through the Minutes of a BoD meeting that it was *considering* broadening the scope of the ARRL to other radio services/groups--and I believe that CB was specifically mentioned there. As a member of the ARRL, I would like to see representation extended to other services and I think that would have to mean that modifications to membership rules would have to be made. I am not sure what the ARRL's vision is on this; I think it would be best to have different "departments" with different memberships, all coming back together under one BoD.

>
> So when you propose "broadening the scope", do you suggest that
non-amateurs

>

I do not propose "broadening the scope." This is an idea that came out of the aforementioned BoD. It has been a topic of discussion a couple of times here in the NG--and I am sorry to say that I just don't have the gumption to look it up. Someone else was kind enough to do that before.

>

who
> all have a non-commercial interest in the use of radio?
>

That would certainly be well-rounded, wouldn't it? BUT, I think it would be very, very difficult to overcome the political differences between the groups to effectively set that up. It would be admirable to see done and maybe it will get to that point someday but, for now, I would imagine that *if* (and it is certainly a big IF) the ARRL every actively moved toward the idea, the other radio services would probably be best served under different "departments" coming back together under one BoD--regardless of affiliation with radio service; though amateur radio would certainly have to have the greater portion :)

I really like your idea, though, of dividing up the Director level.

>
> Can you imagine that such an organization would be good for Amateur Radio?
>
> 73, Hans, K0HB
>

For the reasons mentioned before, I really think it would. I think it would be good not only for amateur radio, but for each and every one of the groups. For instance, I hadn't thought of Fire and Police agencies being included in the scope--and I'm still not so sure of that because of professional associations that surely must exist for them; but I wonder how much more willing "they" would be to provide recognition to "us" if we were all under one umbrella?

It's really quite obvious that at least two people cannot reasonably discuss
this issue without innuendo and accusation. I let myself get wrapped up in
that before on this NG. I won't let it happen again, because it lowers me
to your levels.

I find it interesting that this discussion has quickly degraded into some kind of ritualistic assessment of something being earned, when all that was being discussed was a broadening of the scope of representation for the ARRL to other radio services. Ham radio licensing is not governed by the ARRL, so I don't understand the correlation. As to "accidents of privilege" there is no "built in" privilege to the ARRL just because one is an amateur radio operator--other than voting membership. *Anyone* may be a member of the ARRL, and *everyone* has to pay for that membership. Or shall we turn ourselves into a closed club?

It's certainly not closed, but it's stated purposes are pretty narrow:

On January 29, 1915, the Connecticut Secretary of State recorded the
incorporation of the League under the following three articles:

Article 1. The name of said corporation shall be The American Radio
Relay League Incorporated.

Article 2. The purposes for which said corporation is formed are the
following to wit: The promotion of amateur radio, the organization of
amateur radio stations, the promotion and regulation of amateur radio
inter-communication, and the relaying of messages from station to station,
and the printing and publishing of documents, books and pamphlets
necessary to any of the above purposes.

Article 3. The said corporation is located in the town of Hartford
and the State of Connecticut.

Hi Kim,

Yes, it is refreshing to see some beneficial activity occuring on 11 meters. I find that most who claim none simply aren't listening...or are, at the very least, predisposed NOT to hear it. Re. DFing on 11 meters, a group of buddies and I used to perform an occasional "fox-hunt" on 2 meters with good results. 11 meters is a little tricky re. DFing during the cycle, but I suppose it could be done. Nice response, thanks. Take care and 73.

Dick:

Well, at least this pretty much puts a lid on Cecil's claim to being
an expert on logic! How could I have possibly learned how effective
CW was if I never bothered to learn it in the first place?

Cecil:

Fine, I'm happy for you. How many boy scouts are learning the Morse code these days? Pretty soon they'll be too busy being indoctrinated in "alternative lifestyles" to be bothered with stuff like Morse code and small-bore marksmanship.

Cecil:

Well, too bad things here in the Northeast aren't more like they
are in Texas!  I'd call the Texas trooper's "traffic pacing" to be a
very worthwhile use of his time and the state's resources, since
it proactively leads to safety in the construction zones.  And, yes,
I do have a "problem" with "authority figures" to use their
authority as an alternative form of taxation, while real crimes
are being committed and drivers creating dangerous situations
on the highway aren't being "policed" at all!  If you can't understand
my "problem" with this, I'll have to start calling you "Comrade
Cecil."

>
>Why are there 35wpm Morse code operators when 35wpm has never been a
>requirement?

Cecil:

I dunno -- probably for the same reason that I was capable of doing better than 20 WPM when I went to take the test for 13 WPM. Morse code is something that, once tried, some people develop a knack for which they didn't know they had. The same thing was true for me before I took my first clarinet lesson. I had no idea I could play the thing before I tried it. Once my parents "required" me to give it a try, I found out I had talent for it. If I had never picked up a clarinet, how would I have known that?

>The answer is that a ham learns whatever is necessary
>to be successful at what he chooses to do in ham radio.

I don't disagree with that at all.

>What good is Morse code skill if the ham doesn't have the foresight to
>own a CW rig?

Not much, I'll admit. And without a requirement to learn the code, who's gonna bother to give it a try? I'll admit, some will, but the overwhelming majority won't. When the overwhelming majority *had* to give it a try, we got more avid CW users than we'll be getting out of the no-requirement vacuum.

>> Let's assume that
>> a situation arose where, in actual fact, the only way to get any kind

>
>Emergency CW can be effectively exploited at 3-5wpm by looking up characters
>on a chart.

Perhaps, but it can be much more effectively exploited by an operator

who already possesses adequate skill to send/receive messages in
Morse code at 15 - 18 WPM -- which was the goal sought by the 20
WPM code testing requirement for an Extra-class license.

>I have seen my nieces and nephews doing just that with their CB
>HTs that have a chart on the side and a button for MCW. Note that I am not
>talking about passing a lot of traffic. For single point CW emergency
>transmissions, the present 5wpm requirement is just fine.

Perhaps, assuming the radio operator in question had a Morse code
chart and the ingenuity to figure out a way to key his rig in CW mode.
Someone who just learned enough about ham radio to achieve
appliance-operator status may not necessarily be up to the task.

>But to answer your question in a broader sense. Someone cannot use what they
>don't have. How can CW be effectively exploited if a ham doesn't possess an
>HF rig? How can people eat storage food that they forgot to store? Do you
>have any storage food, Larry?

Quite a bit, actually. I could load up the trunk of my car, drive away, and
be able to eat, drink, and take my prescribed medications for as much
as 90 days. I am also prepared to defend my stockpile from those
who may not have provided as well for themselves. I can also
communicate in Morse/CW for one heck of a lot longer on a full charge
of my car battery than I could on any voice mode. That is, assuming
I have another Morse/CW operator with which to communicate!
How long can you communicate on a single charge of a typical
car battery?

EVERY poll of the populace at large showed a desire to END
55. Ultimately the people voted with their foot on the throttle
to such a degree that the feds finally got the message. So
here we are several years later, higher speeds, and no mass
carnage on the highways at all.

The insurance industry loved 55 because they were able to
bang any of us that did get ticketed with increased rates.

>>The origin of 55 was a gasoline shortage.
>
>Yup. But saving gas was not the only consideration.

WRONG! Saving gas was THE only reason for the initial

legislation. I have seen not one bit of information or evidence
that there was any other reason for the national 55 limit
when it was passed. Had there been any expectation
that the more numerous smaller eastern states were going
to go against lifting the 55 after the gas crisis was over, I
doubt the western states would have supported it.

>>After the
>>shortage ended,

Sure. There is a cadre of safety extremists that fit that
attitude. They are the ones that want to tell you and
me how to live our lives according to THEIR views of
what is right/wrong. They are the ones that'd ban auto
racing, they'd ban just about anything with any element of
risk to it.

>Who are these "safety nazis" anyway?

The extremists in the insurance industry, and some
just plain nut cases.

>> They didn't want to hear that a gross
>>decrease in miles driven had anything to do with it.
>
>Was there really a decrease in miles driven?

If you couldn't buy all the gas you needed, of course there
was a decrease in overall miles driven.

>From what I read, there are more
>cars on the road today, and the average mileage they are driven per year keeps
>going up.

True. The lower miles which lead to what appeared as a
sharp reduction was attributed to 55...as opposed to
other additional factors. When speed limits were raised, the
safety nazis expected increases in highway deaths...it didn't

happen.

> I remember when 10,000 miles per year was given as a general average,
>for maintenace and insurance purposes. Then it went to 12,000. Now it's 15,000
>in some cases.
>
>The important statistic is "casualties per X miles driven".

Agreed, and that is NOT how the safety people want YOU
or ME to look at the stats. Those stats show even lower
numbers today.

>The situation is far more complex. Lower auto casualties are the result of
>several causes:
>
>- Safer cars (air bags, better seat belts, better handling, better brakes,
>better tires, etc.)
>- Safer roads and more of them
>- Safer drivers (less DWI, better driver ed, better enforcement, more use of
>seat belts)
>- Lower speeds
>- Lower traffic density

Agree on all counts.

>Opposing these are factors that tend to increase the casualties:
>
>- Bigger and heavier trucks
>- More and faster driving once the perceived crisis was over
>- More distractions (complex stereos, car phones, people who do all sorts of
>things while driving)
>- Less skilled drivers (inexperienced young people, older drivers with
>deteriorated skills, others with bad habits)
>- More powerful and comfortable cars that give some drivers a false sense of
>safety.
>And these are just the ones I can think of right now.

Agree in general, but the end result is that the negative
factors are far more offset by the positive to the point that
we have higher highway speeds with lower deaths.

>>In the end the 55 limit was ended by BOTH popular
>>opinion AND rational judgement.
>
>I would say it was mostly pressure from public opinion. It's just simple
>physics that slower is safer. And until you get down to 40 mph or so, more
>energy efficient, too. But general opinion was that the benefits were not worth
>the cost in extra driving time.

In the end I am just happy that the hypocracy was finally
ended.

>If the givt. was really serious about 55, there's an easy way to enforce it.

>Just get a fuel-efficient minicar, paint it in bright colors, install a
>precision cruise control system and put flashing lights and the words "OFFICIAL
>PACE CAR" all over it. Then have a state trooper drive it down the highway in
>the left lane at a steady 56 mph. Anybody who passed it would be breaking the
>law, by definition. But to my knowledge no state ever tried such a system.
>
>Overzealous safety advocates? Sure. "Nazis"? I don't think so.

In that they would, if they could, impose their views on all
of us without hesitation, I'd say that is pretty fanatical.

Cheers,
Bill K2UNK

Actually that was done on more than one occasion here in
NJ and well noted by the local press.  The auto driving public
was not at all amused.

Larry,
I'll bite... it can't then be used...BUT, that prospect
is so remote a possibility that there is simply no reason
to use it as a viable argument to sustain code testing
requirements for ALL hams with HF licenses.

Cheers,
Bill K2UNK

```

Not surprising. It goes with the territory.

According to geologists the California shelf was formed in the late Cambrian era when the entire North American continental landmass was tilted. This resulted in all the nuts rolling to one end.

And thus was California formed.

>>
>> - Bigger and heavier trucks
>
>
> I suspect that is a myth.

By "bigger and heavier trucks" I mean semitrailers (18 wheel and up) not SUVs and pickups. Back in the 70s, the largest of these were 40 foot trailers. Then came the 45, 48 and 53 foot trailers, higher gross weight, and the double and triple trailer combos, on roads where they were previously not allowed.

>We already know the occupant of a larger
>vehicle (SUV, Van, etc) will suffer less injuries in a accident with a
>smaller vehicle.

That's not true in all cases - it depends on the accident. Many SUVs are more prone to rollover than smaller vehicles, for example.

>However, based on what I've seen and read, the
>occupants of a larger vehicle will also suffer less injuries even when
>we're talking about vehicles of relatively equal size.

Again, it all depends on a number of factors.

>In other

>words, in an accident involving two roughly equal size SUV's, the
>occupants will suffer less injuries than the occupants of two roughly
>equal small vehicles in a similar accident.

I see what you're getting at, Dwight. Probably true in many if not most cases.
>
> By the way, this pattern holds true even in countries where the
>typical vehicle is smaller than the typical American car. For
>example, in Germany, it is the larger vehicles (Volvo, BMW, etc) that
>have a much lower accident casualty rate than smaller cars (VW, etc),
>again even in accidents involving relatively equal size vehicles.
>
But size isn't the only difference in those cars. Price is another, and that
price often reflects more advanced technologies. Volvo has long included safety
features in its cars that other cars don't have.

> If this pattern is true, it is clear that larger vehicles (SUV's,
>Vans, etc) are actually much safer overall.

No, that does NOT follow. You need to include factors such as accident
avoidability. A small car that handles better may avoid an accident that a
bigger car cannot avoid.

>And, if that is true,
>then government agencies are actually contributing to highway
>casualties by urging people to drive smaller vehicles.

But it has not shown to be true. You say (very corectly) "if it is true".
Proving it true is a tough go.

>In other
>words, if highway safety is a real concern, than government agencies
>should be urging everyone to drive larger vehicles.

Nope. The situation is more complex than that.
>
> Of course, from the government's perspective, highway safety has to
>be weighed against fuel economy (pollution, etc).

Again, several factors are in play here:

Fuel efficiency
Air pollution
Wear on roads
Road capacity

>However, I'm
>convinced the government has gone too far in favor of fuel economy,
>sacrificing too much when it comes to highway safety. The larger
>vehicles (SUV's, Vans, etc) are a better compromise for all these
>factors than tiny cars that fall apart whenever a gust of wind hits
>them the wrong way.

I disagree - again, it's a complex situation. With their higher center of gravity, many SUVs and have worse rollover tendencies. Because large cars cost more to own and operate, the "large vs, small" choice for many people consists of an older model big car/SUV without the latest safety features vs. a later model small car with those features. Is an older SUV without air bags and antilock brakes safer than a newer model smaller car with those features? Not a simple question.

And I haven't seen the really government pushing for small cars since the Carter Administration. We now import more oil than 20 years ago, and the fleet fuel efficiency is static. Cars capable of 50+ MPG were being built 20+ years ago, but they lost popularity as soon as fuel supply and price stabilized. And I'm not talking about tiny cars, either.
>
>> I would say it was mostly pressure
>> from public opinion. It's just simple
>> physics that slower is safer. And

>> more energy efficient, too. [snip]
>
> Both of those (safety and energy efficiency) are based on a great
>number of factors - vehicle size, vehicle design, engine size, engine
>design, tire size, tire design, gear ratio, number of occupants, road
>conditions, and so forth.

Exactly!

>Therefore, it is very difficult to pick a
>single number (so many miles per hour) as best for anything beyond a
>very small sampling of vehicles.

True. That's why I wrote "down to 40 mph or so".

If you look at the fuel efficiency of any vehicle, you'll see it is quite low at low speeds, rises up to a certain speed, then drops again. The critical point where it begins to drop is below 55 mph for any modern vehicle.

>The larger the number of vehicles,
>the less accurate that number becomes. This is why proposed speed
>limits vary so greatly here and around the world.

No, that's not why. Speed limits are determined by a wide variety of factors. But the main point is this: Slower is safer. And down to a certain point, more fuel efficent. But the pressure of popular opinion has resulted in higher speed limits because safety and fuel efficiency are not given enough consideration.

The time saved in a 100 mile trip by increasing the speed limit from 55 to 65 is just 17 minutes (assuming a steady speed from start to finish and allowing no time for acceleration/deceleration at the ends). .

>> If the givt. was really serious about 55,

>> ever tried such a system.
>
> Do you realize how many roads there are in this country, and how
>many "pace cars" would be needed to cover only a small percentage of
>those roads?

Sure. No way 100% enforcement could be done, or even 10%. But the same is true of any type of enforcement.

>In other words, your idea is not very realistic (which
>may be why no state has tried it).
>

Not realistic? The same can be said of radar enforcement - the police give out a few tickets, but the vast number of vehicles escape enforcement.

Point I'm trying to make is that radar enforcement only enforces the speed limit indirectly. "Pace cars" enforce it directly. As Cecil has pointed out, it DOES happen in some places. But pace cars don't generate any revenue, whereas giving out speeding tickets does.

Here's another idea: On toll roads here in the East, the typical method of toll collection is that you get a magnetic-stripe toll card when you enter, then you give it back upon exiting. The mag stripe tells the toll system where you got on so that the toll can be figured. It also tells when you got on so that you can't fool the system by swapping toll tickets with another driver. And the toll info goes to a central computer so that traffic patterns can be figured out.

It would be a simple matter to set up the system so that any toll card which gets to its destination faster than the speed limit causes the issuance of a speeding ticket. Of course such a system could be defeated by making a "pit stop" somewhere on the way, but in many cases people don't make such stops.

Interesting stuff, Dwight.

I've had it with your stupidity. You have no idea what this is all
about.
Not even a clue. Yet you come across as some selfappointed expert, so
archtypical of the no code mentality.

Yoiu know, the code itself has very little to do with any of this. It
just falls as a symbolism of the difference between those who did and
those who were just too useless.

Here's a little report for your consideration... not that it'll matter
a bit to you, of course.

GMDSS is the Global Marine Distress and Signaling System that replaced
the decades old system of having wireless telegraphic distress (WT)
watches and

dedicated Radio Officers on each ship over 1600 GWT. (Large ships above about 350 feet).

GMDSS INSIGHT/OPINION - The following article written by Neville Cresdee appeared in Inmarsat's Ocean Voice April periodical. - - It may surprise some seafarers to know that Morse Code is still commonly used in the Mediterranean, Middle East and Asia, even though it ceased officially to be used worldwide on February 1, 1999. Many Third World countries cannot afford Global Maritime Distress and Safety System (GMDSS) equipment, regardless of International Maritime Organization guidelines.

The Morse Code has served for more than 160 years and its survival is a testimony to a form of telecommunication that relied on human abilities.

GMDSS is a powerful telecoms tool and a worthy replacement to Morse Code. However, as with Morse, it needs dedicated operators, such as specialist GMDSS communications officers, for it to be successful. Until governments understand this then the introduction of the new system will continue to flounder. Under the Morse system, the number of `false alerts` remained, in general, under 1 percent when human operators were involved. This is impressive and acknowledges the true worth of a human presence in a high-risk maritime working environment. However, we could now be in danger of wasting what previous generations have learned. The efficiency of the old system, using a radio officer, was tied to the fact that the ground rules, the basic distress structure, never changed. The system evolved out of a voluntary scheme at the turn of the 20th century, but the focus on the role of the operator remained undiminished. Today, its replacement, GMDSS, is floundering because the focus has shifted on to the importance of the technology employed. GMDSS administrators are repeatedly returning to the International Telecommunication Union (ITU) and changing requirements for the system's apparatus. All these costly and time-consuming changes are attempts to make the system easier for the operators, who basically have just two weeks' preparation in gaining an internationally recognized operating certificate. In reality, the changes probably only confuse them. The professional seafarer is already overworked in the automated era, with crew numbers having been cut. An informative GMDSS website, run by Densham and Associates of Australia, is used by the world's specialists on the system, including surveyors, legislators, technicians and operators, where they discuss the realities of its implementation. According to a contribution by a senior officer of the US Coast Guard, after two years of its using

GMDSS, the false-alarm rate for DSC had fallen from 99 percent to 95 percent and that for 406 MHz Emergency Position Indicating Radio Beacons had decreased from 99.5 percent to 97 percent. In response, someone suggested that, had these figures been known in 1992 when GMDSS was introduced then nobody would have accepted it. Another contributor to the site claimed that in the past, in distress situations it was relatively easy for a radio officer to deal with call signs that were made up of four letters. Today, however, the modern operator has to deal with larger identity formats, such as "356433000", though these are mostly automated. Once a south European port sent a radio surveyor to test and certificate the GMDSS station I was on. The surveyor telephoned the local coast guard for its Mobile Maritime Service Identity (MMSI) number made up of nine digits, to set up a GMDSS DSC VHF public link call for testing purposes. After five minutes, the coast guard reported that nobody there knew the relevant MMSI number. It is imperative that the station ID is known by all on-site operators for distress situations, even though it has to be programmed into the DSC unit. Some administrations are considering replacing DSC for their telecoms; one Nordic country is proposing to accept Inmarsat-C and Navtex as the only GMDSS combination worthy of surveying and certifying aboard ships. This is contrary to existing IMO and national GMDSS regulations. All of us in the industry are guilty of not taking a long-term view of GMDSS. We have become blinded by the power of automation and its potential for saving costs, relegating the importance of the human factor. The price could be more maritime catastrophes. Shipping is a high-risk mode of transportation, but maritime training, especially in GMDSS, remains poor. Professional maritime bodies warn that the present apathy will produce a generation of seafarers lacking practical sea skills. Britain's first 360-degree field-of-view ship simulator has recently opened at the Lairside Maritime Center and has a 5-ton replica bridge and IT suite. But it remains an open question to what extent it will be used as part of `balanced` training involving `real` experience. Simulators seem to carry inherent risks as training aids as well. A study by the University of Illinois in Chicago has looked at the effects on 80 volunteers of being put in a flight simulator environment. It found that those who made decisions based on instrument readings made fewer errors than those who used `aids` that evaluated the results for them. I have found as well that some GMDSS software, when analyzing OTFs (Optimum Traffic Frequencies), can change the reading between 6 MHz and 16 MHz within several minutes. Rear Admiral John Lang, head of the UK`s Marine Accident Investigation Branch, in a report on a near collision, noted that the modern day officer of the watch has to be a radio officer, ship manager, navigator, lookout, helmsman and chief amendments officer for reams of regulations and documents. Small wonder, then, that such personnel are overworked and prone to mistakes. In 1968, when I was trained by old fashioned radio officers, it was quite usual to be a junior radio officer for up to three years, before being given your own ship. Hardware in those days was something you brought from the local ironmonger; today, it is the latest Pentium or Celeron. But one thing has not changed so much and that is human beings. Distress situations still require sharp responses, which are hindered by overwork. The human desire to interact as social beings at work has not changed, either. Reducing manpower and relying too heavily on automation reduces interaction between officers and crew.

I can't see our HF spectrum going up for auction due to it being
an international resource; the FCC surely couldn't auction it.
Are you speculating that the ITU would have international
consortiums submit bids? If so, the amateurs of the world make up
one of the largest international communication consortiums -- with
our financial backing, we could have the IARU bid on it (and probably
win).

Now, if its our V/UHF spectrum you fear being auctioned, well, I won't especially miss it.

You don't sppose Mr. Haney the REACT member had any input into that
discussion, do you? A discussion subject, by the way, that quickly died
out.

As

> a member of the ARRL, I would like to see representation extended to other

> services and I think that would have to mean that modifications to
> membership rules would have to be made.

Why, sure you would! It isn't enoiugh that ham radio testing has been made so dead easy that you can get your ham radio lciense with no more than CB learning and skills, you now want to complete the conversion of ham radio completely into CB. Not a bit surprising, I might add.

Why in hades should the ARRL *want* to 'broaden' itself to any other
radio service? The only conceivable answer would be the very obvious-
$$$$$$
As a member of long years standing, we DON'T need any of that sort of
money.

Ham radio licensing is not governed by the ARRL,
> so I don't understand the correlation. As to "accidents of privilege" there

You should not have read so loosely. Only licensed ham radio operators
may be voting members. Non licensed people are associate members.

Or shall we turn
> ourselves into a closed club?

As far as voting goes, it has always been a closed club.

>

Hope this isn't a duplicate -- previous post didn't seem to make it. Thought it might be of interest...

KH6O

ARA FREE PRESS - MAY 20, 2001
THE WEEKLY UNION NEWSPAPER OF THE SEA
MARINE ELECTRONICS DIVISION - ILA, AFL-CIO

GMDSS INSIGHT/OPINION - The following article written by Neville Cresdee appeared in Inmarsat's Ocean Voice April periodical. - - It may surprise some seafarers to know that Morse Code is still commonly used in the Mediterranean, Middle East and Asia, even though it ceased officially to be used worldwide on February 1, 1999. Many Third World countries cannot afford Global Maritime Distress and Safety System (GMDSS) equipment, regardless of International Maritime Organization guidelines. The Morse Code has served for more than 160 years and its survival is a testimony to a form of telecommunication that relied on human abilities. GMDSS is a powerful telecoms tool and a worthy replacement to Morse Code. However, as with Morse, it needs dedicated operators, such as specialist GMDSS communications officers, for it to be successful. Until governments understand this then the introduction of the new system will continue to flounder. Under the Morse system, the number of `false alerts` remained, in general, under 1 percent when human operators were involved. This is impressive and acknowledges the true worth of a human presence in a high-risk maritime working environment. However, we could now be in danger of wasting what previous generations have learned. The efficiency of the old system, using a radio officer, was tied to the fact that the ground rules, the basic distress structure, never changed. The system evolved out of a voluntary scheme at the turn of the 20th century, but the focus on the role of the operator remained undiminished. Today, its replacement, GMDSS, is floundering because the focus has shifted on to the importance of the technology employed. GMDSS administrators are repeatedly returning to the International Telecommunication Union (ITU) and changing requirements for the system's apparatus. All these costly and time-consuming changes are attempts to make the system easier for the operators, who basically have just two weeks' preparation in gaining an internationally recognized operating certificate. In reality, the changes probably only confuse them. The professional seafarer is already overworked in the automated era, with crew numbers having been cut. An informative GMDSS website, run by Densham and Associates of Australia, is used by the world's specialists on the system, including surveyors, legislators, technicians and operators, where they discuss the realities of its implementation. According to a contribution by a senior officer of the US Coast Guard, after two years of its using GMDSS, the false-alarm rate for DSC had fallen from 99 percent to 95 percent and that for 406 MHz Emergency Position Indicating Radio Beacons had decreased from 99.5 percent to 97 percent. In response, someone suggested that, had these figures been known in 1992 when GMDSS was introduced then nobody would have accepted it. Another contributor to the site claimed that in the past, in distress situations it was relatively easy for a radio officer to deal with call signs that were made up of four letters. Today, however, the modern operator has to deal with larger identity formats, such as "356433000", though these are mostly automated. Once a south European port sent a radio surveyor to test and certificate the GMDSS station I was on. The surveyor telephoned the local coast guard for its Mobile Maritime Service Identity (MMSI) number made up of nine digits, to set up a GMDSS DSC VHF public link call for testing purposes. After five minutes, the coast guard reported that nobody there knew the relevant MMSI number. It is imperative that the station ID is known by all on-site operators for distress situations, even though it has to be programmed into the DSC unit. Some administrations are considering replacing DSC for their telecoms; one Nordic country is proposing to accept Inmarsat-C and Navtex as the only GMDSS combination worthy of surveying and certifying aboard ships. This is contrary to existing IMO and national GMDSS regulations. All of us in the industry are guilty of not taking a long-term view of GMDSS. We have become blinded by the power of automation and its potential for saving costs, relegating the importance of the human factor. The price could be more maritime catastrophes. Shipping is a high-risk mode of transportation, but maritime training, especially in GMDSS, remains poor. Professional maritime bodies warn that the present apathy will produce a generation of seafarers lacking practical sea skills. Britain's first 360-degree field-of-view ship simulator has recently opened at the Lairside Maritime Center and has a 5-ton replica bridge and IT suite. But it remains an open question to what extent it will be used as part of `balanced` training involving `real` experience. Simulators seem to carry inherent risks as training aids as well. A study by the University of Illinois in Chicago has looked at the effects on 80 volunteers of being put in a flight simulator environment. It found that those who made decisions based on instrument readings made fewer errors than those who used `aids` that evaluated the results for them. I have found as well that some GMDSS software, when analyzing OTFs (Optimum Traffic Frequencies), can change the reading between 6 MHz and 16 MHz within several minutes. Rear Admiral John Lang, head of the UK`s Marine Accident Investigation Branch, in a report on a near collision, noted that the modern day officer of the watch has to be a radio officer, ship manager, navigator, lookout, helmsman and chief amendments officer for reams of regulations and documents. Small wonder, then, that such personnel are overworked and prone to mistakes. In 1968, when I was trained by old fashioned radio officers, it was quite usual to be a junior radio officer for up to three years, before being given your own ship. Hardware in those days was something you brought from the local ironmonger; today, it is the latest Pentium or Celeron. But one thing has not changed so much and that is human beings. Distress situations still require sharp responses, which are hindered by overwork. The human desire to interact as social beings at work has not changed, either. Reducing manpower and relying too heavily on automation reduces interaction between officers and crew.

Neville Cresdee is an engineering technician and GMDSS/IT/communications officer. He has worked on board Greenpeace's flagship as a Radio/GMDSS officer and as Chief Radio/GMDSS officer on board a hospital ship and a refugee ship. He is dedicated to implementing and improving GMDSS to ensure safety of life at sea.

He's too clueless to realize that the FCC is not able to arbitrarily
auction off spectrum that has international assignments to hams.

> Now, if its our V/UHF spectrum you fear being auctioned, well, I
> won't especially miss it.

And this is where we WILL be losing specrum to demands of other services as the pressure for additional spectrum to service their needs grows. This WILL happen regardless of what hams do or do not.
I guess you can't expect erstwhile CB types to know anything about any of this.

I'm sorry, I thought we were talking using cars dedicated solely to this purpose. Yes, I have occasionally seen a line of cars behind a slower moving police vehicle. However, I have to agree with Larry - most cops don't have the time to do this very often (they have places to go - the donut shop just took a fresh batch out of the oven).

By the way, watch out if you're ever in this situation. Police officers have developed a ploy based on this. It goes like this. The officer will drive some distance to get a pile of vehicles behind him. At that point, he will exit the freeway. Of course, as you describe, the vehicles will speed up just as soon as the police car is out of sight. However, in this case, the officer reenters the freeway on the other side of the overpass and quickly comes up behind the cars that were just following him (the ones who sped up after he exited). I've seen this ploy used over and over, and it almost always works.

My wife and I both read a lot (we share key points of what each reads). However, in this case, much of what I wrote was based on what I read in newspaper accounts of accidents, with some light reading of accident statistics to see if I could find the pattern there. As far as I know, there has been no in-depth study on this, but I certainly would like to see one done.

As I pointed out in an earlier message, accident prevention is not the only thing that has to be considered. If traffic is slowed down on major highways in large cities, the complaints from commuters will go up dramatically, as will traffic on alternative roads (with increased complaints from residents along those alternative roads). Employers in the area will complain because employees are arriving late because of the traffic jams. And merchants will complain as customers avoid the downtown area to escape the traffic jams. Add to all this, the cost of the vehicles involved in these "rolling pace cars," including the cost of gas and maintenance, and you quickly begin to realize this is not really a sound idea.

Represented for what? One is a recognized hobby service with its own
traditions -- good or bad as you may like -- the other is a Land Mobile
service that has become a hobby and most certainly has traditions of its own
largely incompatible with the ARS. For why does CB require representation
at all?? Of what conceivable value is ARRL membership to the law-abiding
CB, FRS, etc user?

The difference is between the user of plumbing and the Plumbers Union. Both are perfectly admirable in themselves and do share a certain relationship; there are certainly porcelain fixtures at the Union Hall. But worshiping the ceramic god hardly makes one a plumber. Unless the object of common representation is an attempt to blur the distinction, what purpose could it serve?

How can a ham handle traffic in Latin if he or she is isn't adequately trained and experienced in that language.

>Keep things like "operator choice" or "necessity" out of the equation.

I think that the aspects of ham radio that are part of our examination requirements should be very much related to necessity.

> Let's assume that a situation arose where, in actual fact, the only
> way to get any kind of message from point A to point B, considering
> conditions, power availability, etc. is to use Morse/CW as opposed to any
> other mode.

That assumption doesn't hold water. Digitial modes can have a 10-15 dB advantage over OOK CW. If you want a regulation that will guarantee what you are claiming to want to accomplish, that regulation should require that a ham actually maintain a transmitter capable of emergency communications.

>How can this mode be effectively exploited if a trained, proficient
>CW operator is not available?

How can the 10-15 dB better digital mode be effectively exploited if hams are not required to have a station that can use that mode?

I would patiently sit by and deal with emergency communication under those conditions. Perhaps Larry wouldn't handle emergency traffic at less than 20 wpm. :-)

Okay, you have given us two examples of things you wouldn't have tried unless
you were forced to. Of all the things in your life you have tried, what
percentage were forced and what percentage were voluntary?

I cannot understand that a dislike for CB, (and FRS/MRS from other posts I've seen) runs so deep that using CB for emergency services is even shunned! Isn't there *any* redeeming quality in that Channel 9 *is* reserved and used for emergency use only? I would think we'd find it comforting that there are those non-ham folks who have radio services that are potentially life-saving to motorists, travelers and even shut-ins. In each of those examples I just noted, I have heard real-life scenarios played out on CB here locally.

That REACT has its roots in keeping CB "clean" and that there is such disdain from the ham radio community for that, really emphasizes the fact that personal feelings and prejudices are allowed to get in the way of common sense and sensibility. In my opinion, REACT is that much *more* adult-like in their approach to emergency communications for recognizing that all means of communication are viable and needed in an emergency.

If your distaste runs so deep for CB and other radio services because of bad operating practices in those bands, I suggest you also drop ham radio, as there are plenty of examples of bad operations in the ham bands--and don't even go to the "lite" hams; the bad operators I am speaking of are there nightly and have been for many years.

Good grief.

I'd like the ARRL to continue on its path to embracing all radio
communications as a part of their mission statement. Only then will they
truly be the "the national association for amateur radio"--emphasis on
association.

In my limited experience with all things related to internet access, Chat Rooms, Usenet, Newsnet, Discussion Groups, etc., that are unmoderated and, heck, even most of those that are, are not the place for anything remotely related to serious discussion.

Especially this NG :)

One cold night in West Texas during an ice storm, I was stranded on the
side of a lonely stretch of I-10. I couldn't raise any repeaters or hams.
A CBer came to my rescue.

I prefer to keep the emphasis on Amateur Radio. That doesn't mean that hams can't cooperate with other radio services (indeed we ought to), but Amateur Radio needs an organization which first and foremost focuses on our special circumstances.

Where our interests intersect ARRL certainly should form alliances with other groups (REACT, EIA/ANSI, IEEE, AMCROSS/SALVATION ARMY, MARS, CAP etc.), but those alliances must be secondary, not the primary mission of the "National Association for Amateur Radio".

Mike:

Exactly. I've said many times over the years that I support the liberal allocation of RF spectrum at VHF and above to people who desire effective, reliable land/mobile personal communications, but don't necessarily have the desire to become radio amateurs. In fact, even licensed hams could make use of such a service, since there would not be any sort of "no business use" rule attached. We can't say that such a service already exsists, and look to GMRS as an example, because GMRS infrastructure (repeaters) is not as widespread as anything known to amateur radio operators on the 2m and 440 MHz bands, and there are very few channels. I've always looked at the amateur 1.25m band as a good place for some reallocation, since 220 FM/repeater operation is largely unheard of in most part of the country. I forsee a new kind of "radio club" in which a group of 1.25 meter non-ham LMR users get together, pay a fairly large initiation fee ($100 - $250 range) and annual dues to "belong" to a local repeater system, with "roaming" privileges to other systems. I forsee this service having 50 or more "channels" permitting coordinated, coast-to-coast repeater service, and another 25 or so strictly for local simplex and simplex digipeater systems. Since users would be paying for their service, the local club could afford to put good, solid equipment into good sites in high places with adequate coverage. REACT and other groups could glom onto this for emergency communications, as an adjunct to present Children's Band and GMRS operations. There would be licensing, rules to obey (with stiff penalties for not doing so), call signs which must be used, and strict, immediate, step-out-of-line-and-you're-toast enforcement -- primarily in being shut out of local repeaters by dictatorial control operators. And for all of this, there isn't even any mention anywhere of things like "code" and "testing" -- and there shouldn't be. I would call it the Personal Radio Service, or PRS.

I think the obvious organization to implement such a service is the ARRL, which could then refer to itself as the "National Organization for Amateur and Personal Radio Services." The two would then be properly separated, their participants allowed to comingle at will, but since one is no longer the other, there will no longer be any jealousy, animosity, or whining about things like code tests. If you want to be a ham, you meet the requirements. If not, you can meet any conceivable personal communications need (except, perhaps, for HF DX'ing) in the Personal Radio Service for a much lower investment than a cellphone and a year's worth of airtime.

Of course, with the implementation of the PRS, we would then revert back to Pre-Restructuring licensing standards in the ARS, with no looking back, and no whining. This includes three-level code testing at 5, 13, and 20 WPM, and a return to the five-level license class standard, sans Novice: Tech (no-code), Tech Plus, General, Advanced, and Extra. The ARRL would perform all licensing and callsign database management, thus giving that organization some juicy growth to stimulate their interest. All the FCC would do is rubber stamp licensing policies and provide the enforcement authority. Privatization of government services at its finest.

Thoughts/comments? Good idea or all wet? If not, why not?
If it's a good idea, why haven't we done it yet?

The title is the "American Radio Relay League." No where in the title of the
organization is amateur radio indicated, so why would anyone have a problem
with including all radio communications?

Ed:

Creating a rig that operates within the rules requires professional electronics training and experience which surpasses the requirements for amateur radio licensing. All a ham needs is to be aware of these requirements, be able to ascertain, using simple techniques, that he is, in fact, in compliance, and understand the importance of limiting interference originating from his station. I'd rather that a ham know how to properly adjust his Mic gain and ALC controls than be able to render all the permutations of Ohm's Law.

Tom:

I was about to say the same thing; thanks for taking the words right
out of my fingertips!  There are plenty of amateur radio policy issues
of interest to me, and I'd be perfectly willing to read everyone's
opinions on them, as well as offer my own.  S25.5 is a perfect
example -- K1ZZ's editorial about same in this month's QST was
a real eye-opener.  There's much more there than code testing --
and we hams need to be aware of this.

Ed:

It wasn't the "inherent value" of the Morse code that made *me* learn
it! It was the code testing requirement! I wanted to be a ham; and,
specifically, one who could talk into a microphone on the HF bands.
THAT is why I learned the Morse code. Once I learned the Morse
code, and did so at a useful proficiency level, I learned some things
about the Morse/CW mode that I never guessed I'd learn -- mainly,
that I found it to be a very fun, challenging, and immensely useful
mode! If "no-code" licensing had been the paradigm in 1981, I would
NEVER have bothered with it -- and that's the truth!

Why did you learn the code, Ed?

Ed:

I'd be interested in your direct response to the original question.
How can a ham handle traffic using Morse/CW if he isn't adequately
trained and experienced in that mode? Keep things like "operator
choice" or "necessity" out of the equation. Let's assume that
a situation arose where, in actual fact, the only way to get any kind
of message from point A to point B, considering conditions, power
availability, etc. is to use Morse/CW as opposed to any other mode.
How can this mode be effectively exploited if a trained, proficient
CW operator is not available?

Dick:

Just where the heck have you ever seen a State Trooper going at a legal double-nickel? Those guys have only two speeds -- Flash past you fast enough to suck the paint off your car, and Hide behind a billboard with the Laser gun! Of course, when it's the end of their shift, they can go even faster when headed back for the troop barracks!

>Dwight Stewart   (W5NET)

Dwight:

This idea is a sound one, and could be implemented where it is needed the most -- on major Interstate spurs through large cities. On I-95 between the Maryland/Delaware border, thru Philadelphia to the New York State line, the speed limit is set at 55, but the average pace of traffic in some areas is at least 70, with a lot of cars trying to do 85 or more. "Pacing" this traffic down to 55 or 60 could save a great number of accidents and save a lot of lives. A dozen or so pace cars could control the overall speed on this stretch of highway quite effectively. I also believe that more effective enforcement of aggressive driving needs to be implemented -- preferably with helicoptors monitoring for same and notifying patrol cars which vehicles to pull over after witnessing aggressive acts. In four years spent travelling I-95 working for an airport shuttle service, I've seen enough aggressive driving to convince me that this is a major safety hazard that needs to be effectively policed -- and the troopers can't do that while they're holed up behind billboards trying to ensnare the speeders they can catch.

Dwight:

On behalf of my three friends, thank you very much. I could care
less whether or not you dismiss my arguments, since I'm just as
likely to dismiss yours. But if you dismiss what I consider to be
three of the best hams I've ever met, you're really going to annoy me!

BTW -- not that it matters, but of the "three," two are total supporters
of code testing, and one basically doesn't have any stated opinion one
way or the other. Code testing is the third rail of ham radio politics --
you touch it, and you get zapped! He chooses not to touch it!

Kim:

In my vast experience with all things related to the Internet, Chat Rooms, Usenet, Fidonet, etc. is that in moderated or unmoderated forums, serious issues can be discussed seriously as long as they are stated in a manner which motivates and inspires the participants to provide serious, thoughtful replies. I started my "career" in online discussion groups when I read a no-coder literally refer to those who supported code testing requirements as doing something equivalent to "ethnic cleansing." Had the individual merely stated his heart-felt disagreement with code testing requirements, I'd have probably taken his personal opinions at face value and respected them for what they were -- *his* opinions! My reply, if any, would have been to merely disagree, and explain why. It was this particular participant's attitude toward those he disagreed with that "set me off," and the rest is history.

Is there a topic you wish to discuss "seriously" here in this NG? If so, I'm sure you can do so, and if you present it the right way, you will be very satisfied with the results. I know, because I've done it many times over the years. My experience is that if you behave like a person who is to be taken seriously, then you *will* be taken seriously!

My work is done. Although no new, meaningful policy discussions have arisen here, there is at least now some positive sentiment being put forward about the concept. The possibility is being considered, which means that my hopes and expectations have been exceeded.

I just figured that everybody would tell me to take a hike, check out alt.whine.recursive   or something like that.

...But there's always what some may see as a cloud hanging overe this bit 'o sunshine. I probably won't wait so long now, before coming back to take another look. I feel encouraged.

Why would you believe that one (association with another group) leads to the other (de-emphasis on ham radio)? Almost every organization has associations with other groups (actually, most likely a long list of other groups - some directly related and some vaguely related). Your town likely has associations with other towns. Your local school likely has associations with other schools. Your local hospital likely has associations with other hospitals. The same with almost every other group, club, association, or business, in your town.

None of this suggests for a moment that those groups are changing their own emphasis, or performing their own objective in a less effective manner. Why, then, would it be different for the ARRL? In fact, I'd be very surprised if ARRL doesn't already have associations with a long list of other groups.

In other words, Dick, lets not jump the gun and panic here. The fact that ARRL is reaching out to other groups does not, in itself, suggest any change in the emphasis of the ARRL.

As much as I love ham radio, I still have a CB in the SUV. I don't use it very much (in fact, it stays off much of the time), but I don't think I'd be willing to travel any distance without it. And it has come in very handy at times. For example, I got lost in Houston during the afternoon rush hour (took a wrong turn on the freeway) and a local trucker gave me directions to quickly get back on the correct road again. Without his assistance, it may have taken hours with the maze of one way streets and bumper to bumper traffic.

It has also led to some funny moments also. I was hauling tail (yes, I was speeding) down I-95 in Georgia and came up behind a slower truck passing a still slower car. In a moment of silliness, I got on the radio and called out for the "red Schneider truck on I-95" to, "Get out of my way - I'm in a hurry and you're slowing me down." The driver, upon hearing my comments, hit his brakes really hard and moved into the right lane behind the car he had been passing. Of course, in addition to surprising me, this sudden move by the trucker also surprised the car he was passing, who slowed down even more (probably thinking a cop was coming). Anyway, the trucker and I talked (and had a good laugh) for the next fifteen miles until I started getting out of range. It was a moment of silliness in an otherwise long boring trip.

Have you ever been to West texas, Dick? There are some seriously long, lonely, stretches of road out there, especially if you break down at night (something I've avoided in doing so far - though I did come close to running out of gas one night).

Around here, we sometimes have very long construction zones. Quite
often, a Texas Highway Patrolman will drive back and forth along
the construction zone at the legal speed limit which is usually
45mph. Most of the his time is spent slowing down traffic, not
giving tickets.

This seems to be just another example of the problems you have
with authority figures.

I was introduced to Morse code in the cub scouts and learned it because
it was fun and my cousin and I could send secret messages between our
houses next door to each other. Years later, when I found out about
amateur radio, I had not forgotten Morse code.

Larry Roll K3LT wrote:
> I'd be interested in your direct response to the original question.
> How can a ham handle traffic using Morse/CW if he isn't adequately
> trained and experienced in that mode?

Why are there 35wpm Morse code operators when 35wpm has never been a
requirement? The answer is that a ham learns whatever is necessary
to be successful at what he chooses to do in ham radio. What good
is Morse code skill if the ham doesn't have the foresight to own
a CW rig?

> Let's assume that
> a situation arose where, in actual fact, the only way to get any kind
> of message from point A to point B, considering conditions, power
> availability, etc. is to use Morse/CW as opposed to any other mode.
> How can this mode be effectively exploited if a trained, proficient
> CW operator is not available?

Emergency CW can be effectively exploited at 3-5wpm by looking up characters
on a chart. I have seen my nieces and nephews doing just that with their CB
HTs that have a chart on the side and a button for MCW. Note that I am not
talking about passing a lot of traffic. For single point CW emergency
transmissions, the present 5wpm requirement is just fine.

But to answer your question in a broader sense. Someone cannot use what they
don't have. How can CW be effectively exploited if a ham doesn't possess an
HF rig? How can people eat storage food that they forgot to store? Do you
have any storage food, Larry?

So you are too lazy to learn Morse code without being forced to do
so by the requirement even though you know how effective CW is?
Thank God, most hams are not like you, Larry.

Only one try, Dick, at a serious discussion without getting into making it yet another dragged out name-calling session.

You did not approach an answer for the question asked above. And, while I did not ask it as you implied, I'll reiterate now (paraphrased) for the sake of conversation: If I am an ARRL member and I support the move to encompassing more radio services than just the ham radio folks, I ask why you--presumably as an ARRL member, but at any rate--have a problem with including all radio groups under the umbrella?

If one is to believe that the ARRL brings "credibility" to the ham radio bands and our specific hobby; then wouldn't they also do so to other radio services--and isn't that a plus for us in that it *may* "clean up" the other services as well?

If one is to believe that the ARRL facilitates focus on enforcement issues for our specific hobby; then wouldn't they also do so for other radio services--and isn't that a plus for us that it *may* "clean up" the other services, provide our communities with many other alternatives for emergency services, create standards across the board for communications via RF, and give families and schools that much more opportunity to have a viable "project" they can all work on? FRS does not now have a national organization with resources for equipment standards, communications standards, etc. ARRL could do that. It could do the same thing for CB, GMRS, etc.

There's a lot of potential, that I personally think you are overlooking, for all radio services to be included in the ARRL--think for example of the larger budget they would have! The question was asked, you retorted with nothing more than a brief attempt to make it seem as though the idea and anyone who supports it is below your standards. What are your standards, Dick? Serious, now, remember.

Kim W5TIT

You just won the rrap "Dumbo of the Month Award" for that one.
>
If you don't want that award inflicted on you The Committee has
decided that it might cut you some slack if you can satisfactorily
explain how the word "Relay" got into the title of the ARRL.

I would differ with you on that, Brian. The commercial broadcasters have plenty of professional unions and associations they can avail themselves of. You took literally my statement of "all radio communications" and used it to slam the ARRL being a broad-based association idea as a whole. Now that I have clarified that I mean non-commercial radio, what ideas against such broadening of the scope of the ARRL do you have? If you wish, I could specifically the radio services that I am including, but I think you knew that.

Mark:

I don't know if it's still going on, but the last time I listened (about 2 years ago) with any regularity to CB, I actually heard an active traffic net on 37 LSB! I didn't listen long enough to learn much about it, I was dialing through the CB I was listening to just to see how much activity there was.

At any rate, I found it very interesting and encouraging that these folks were struggling through the noise and distractions inherent with CB radio and making a truly good use of the service. I have since purchased the Cobra CB radio, but haven't had it on long enough to tell if there is any regular activity like that. The idea I had was that CB, at a minimum, would be an excellent source for using radio to communicate while DFing interfering signals, would be an excellent source for "busting" illegal operations, and--think about it--ham radio cannot be used for commercial activities, right?

Think about the combination of ham radio and CB radio in helping out stranded motorists, campers, etc., who either are hams or are around hams? Quite a few wrecker services around here (and I'm sure elsewhere), have CB radios set up in their trucks and at their business locations. A ham radio operator with a CB could contact a wrecker service for assistance, communicate directly with them over the CB service, then advise the stranded motorist on ham radio that help is on the way. I know that I won't risk my ham radio license to call a wrecker service, or any other commercial entity through an autopatch--CB solves that problem.

Using CB during DFing is a seriously artful way in which to employ CB. The dork causing the deliberate interference is likely *not* listening to their CB at the point when they are being located and discovered. Sure, other

bands such as 220, etc., are probably even more artful...but they're also
more expensive.

Kim-W5TIT says...

>Now that I have clarified that I mean non-commercial radio, what ideas
>against such broadening of the scope of the ARRL do you have? If you
>wish, I could specifically the radio services that I am including, but
>I think you knew that.

Kim,

It's not clear yet to me what "non-commercial" means in this context, and to what extent you want ARRL to "broaden" itself.

As you know, the ARRL bylaws currently limit voting membership to *licensed amateurs*, and requires Directors and Officers to be licensed amateurs. This, in and of itself, self-limits the major focus of the organization to Amateur Radio matters (although the organization frequently cooperates with other organizations on areas of mutual interest).

So when you propose "broadening the scope", do you suggest that non-amateurs could have voting membership, and that Directors and Officers need not be licensed as a requirement for election?

Would you suggest, for example, that the President of ARRL could be a non-licensed person whose interest in radio was as the communications officer of the NYC Fire Department, and that the 15 ARRL Directors might be a CB'er, a CAP member, a GMRS repeater owner, the communications officer of the Minnesota DNR, the Commandant of the Coast Guard, a Lt in the California Highway Patrol, a scoutmaster who uses FRS to communicate with his troop on campouts, a MURS operator, and other similar non-amateur-licensed persons who all have a non-commercial interest in the use of radio?

Can you imagine that such an organization would be good for Amateur Radio?

Forsooth. Regardless how well they dress it up and the quality of the perfume they splash on, REACT "ain't no kin to Pappy!"

Well, whadda ya expect, Brian? That she shouldn't one day be able to
ask, in all innocence - "Ham Radio exam? What's that??" We're almost
there already.

We? I have a news flash for you, Dick-O. Kim and I aren't the only ones that
feel the same way. I, for one, ahve never been able to understand the animosity
taht exists between CBers and hams. There's good and bad in both, but to say
that one is better than the other is nothing but elitism. That attitude has
killed many good things.

Charles,

The Morse code exam matter over shadows all other
amateur radio policy matters. As some one said,
"if you can not stand the QRM, stay off the channel",
or something like that. Good luck. :-)

See you next year.

Larry KC8EPO

Why not try posting some opinions on other policy issues? If you want to
discuss them, you're the one who's going to have to take the first step. No one
else is going to do it for you.

No wonder you can't learn the code, TL. You can'd read simple EAnglish.

Larry, that is absolute BS, and you know it. I have talked to you many times in this newsgroup about the code testing requirement, and never once have I been anything other than polite to you. I have never called you names in any discussion relating to code testing (though I have uttered a few choice words while reading your insulting responses). And I have never accused you of any, or every, "possible crime that can be committed against the ARS." And I dare you to show one message I've written to you about code testing that proves anything in this paragraph to be untrue.

In response to that politeness, you have repeatedly called me names, repeatedly attacked my character, repeatedly distorted my position, and repeatedly accused me of spreading lies and deception. To be perfectly honest, I'm getting tired of your hate-filled rhetoric directed at those opposed to code testing, and to new hams in general. I'm tired of your attempts to dump everyone opposed to code testing into the negative stereotype you're trying to promote above. And I'm tired of your attempts to belittle, and ridicule, new hams simply because we fail to meet your standards when it comes to morse code.

I've met a lot of people in my life, and, without a doubt, based solely on what you've written in these newsgroups, you are perhaps the most bigoted, rude, person I have ever had a discussion with. Now you insist that you're different outside these newsgroups - that you're really a nice guy in real life. That might be possible if the attitude displayed was an occasional thing. But, since it has been consistent and pervasive in the messages you've posted over a number of years, it is really hard to believe you can just switch it off when you leave these newsgroups.

Anyway, regardless of that, I'm not asking for any special consideration, Larry (when it comes to ham radio or these code discussions). I'm simply asking for the SAME consideration I've shown you. And I don't really think that is too much to ask.

Not so, Larry. I come to this newsgroup to discuss the issues that interest me - not to be called names, have my character attacked, have my positions distorted, and so forth, by you. Nobody would do that willingly (which is why I'm discussing it with you now). Yes, I come to this newsgroup willingly, but I do not have to willingly accept what you say about me. And, when I'm talking about "verbally pounding on another human being," I most certainly have the right person. It has become almost a routine in the messages you post (to me and others).

The last time I checked with REACT, there were three REACT groups in this general area. Only one of the three seems to have any involvement with CB radio, and none seem to be involved with monitoring CB channel 9. One meets at a local airport and has something to do with private aircraft (don't ask me). One is a off-road racing club. And the third was started by a scuba-diving club (again, don't ask me).

Well stated. Theses pro-code attitudes will be the downfall of amateur
radio.

Dwight:

Well, you're going to have your own distorted viewpoint no matter
what I say, but I most certainly have NOT been "verbally pounding"
on you, personally. I happen to disagree with the politically-correct,
anti-code testing point of view, and am able to express that

disagreement articulately and with great conviction. This is obviously a threat to you, since you cannot support your own position as effectively. So, therefore, this new whine about how I'm being so mean and nasty to little old you. Sorry. No cigar. Whine away -- I could care less how insecure and ineffective you make yourself look in this newsgroup.

On second thought,

The HR2510/Lincoln are great for using with a transverter though. Plus, if you're an EX-freebander turned legal amateur licensee, it's a kick to be able to use the same rig to obtain multi-mode 2 meter performance with the addition of a Ten-Tec 1210 transverter. Down East Microwave, Inc. also offers really nice 2 meter transverters. You retain all of the features of your 10 meter rig such as speech processor, additional filtering, repeater offsets, etc. Now there's a useful purpose for an "export" rig. (Which the HR2510/Lincoln are NOT, BTW.)

This NG was spun off from rec.radio.amateur.misc specifically to
provide a home for the code test debate which was overloading rram and
it's still serving that purpose.
>
Nobody "dominates" this NG and plenty of other policy issues are
kicked around. Tune the threads, ignore the code test thing and/or
toss your own policy hot buttons at the server. What you get out of
this NG is a function of what you put into it, lurking on the
sidelines is not gonna inject the policy issues you care about into
the discussions.

Nothing "adverse" that I know of. REACT has several "integrated" units nationwide that work rather well. Several in SoCal utilize CB/GMRS/Amatuer effectively.

There used to be a rather well established club in the Philly area in the early 80's.

>on you, personally.

Perhaps not him, but you certainly like to take your liberties with anyone you deem "inferior" to you...perhaps those whom you feel may have wronged you in another "career"...?!?!

>I happen to disagree with the politically-correct,
>anti-code testing point of view, and am able to express that
>disagreement articulately and with great conviction.

If being insulting and abusive is "articulate", then I guess we can agree with your "great conviction" assertion. What were the commetns you made about Kim's appearance? You opinion on her looks had ANYTHING to do with the "code" issue?

>This is obviously
>a threat to you, since you cannot support your own position as
>effectively.

He's done so rather well. Too bad you can't agree.

>So, therefore, this new whine about how I'm being so
>mean and nasty to little old you.

And Kim...and me...and.....

>Sorry. No cigar. Whine away --

>I could care less how insecure and ineffective you make yourself
>look in this newsgroup.

You could only wish. I don't agree with some of his posts, but he can disagree without being disagreable...unlike you and Lennie the Limp. Oh, you can turn a phrase with the best of them, but who cares.

>The Morse code exam matter over shadows all other
> amateur radio policy matters

In the grander scheme of REAL Amatuer Radio policy, the "code exam matter" is overshadowed by such things as spectrum protection, antenna restrictions, new technology implementation, band realignment, etc etc etc.

Only in this forum is it of any real "concern", and then only to a few of those herein. The "code exam matter" has been offered the death knell by almost every major administration around the world, and it's continued existence (as a mandated requirement) past 2003 is nil.

>> Can anyone direct me to a usenet group where Amateur Radio
>>Policy IS discussed? Someplace where the discussion is not lost in >>the noise?

Care to open a "Yahoogroups" reflector on the matter, Charles? The only way you will get any REASONABLE discussion is via a moderated forum that seperates the flamethrowers from the flock.

>> I'll lurk a few days, then give it another year, I suppose. I'm a real
>> optimist.

It will be a few wasted days.

A glimpse into Larry's personality is his statement that virtually every
one of Larry's bosses have been malevolent characters while, he as a boss,
is the personification of benevolence.

Hi Brian,

If I recall correctly, Charles only likes to engage in discussions about
packet message forwarding. He has a propensity for calling his
correspondents a "landline lid" - whatever that is.

Then the problem you posed initially would be naturally self-limiting.
Those who can do, will do. Those who can't do, won't do. Would it be
better if everybody could? Of course. But it's probably unrealistic to
demand or expect such uniformity in such a diverse group as are radio
amateurs. I am happy to associate with amateur radio operators as a
generally technically adept group, however.

GMRS and MURS are the only options available to private individuals
who need to get away from the crap on 27mHz in order to have decent
short-range utility comms. So REACT has eaten them. Or something. Hams
rally around the ARRL flag, the others rally around the REACT flag.
The pregnant question of course is who will get the last bite down the
road and "unite" all of "us"? Whence cometh my "Puke" thing.

Right now I am not interested in altering this newsgroup, just monitoring it for relevance (and finding very little of it). I'm not interested in starting up any new ones, either. What I would prefer to do is look for something already in place; A serious place to discuss Ham Radio Policy issues.

Well, actually they have a few more options than just Texas A&M. UC
Irvine for example. :-)

Then might as well move on. It is as it will always be.

>I'm not interested in starting up any new ones, either.

Then why the serious tone? Not too interested, perhaps?

>What I would prefer to do is look for
>something already in place; A serious place to discuss Ham Radio >Policy issues.

I tried. It won't happen here. But you might try just drafting and posting something you find relevent, however, and it might still find a sympathetic forum. I did sometime ago and it was picked up by Bill Pasternack and printed verbatim in Worldradio. (Nov 99).

In your opinion, Bill. Others think 55 was just fine. It all depends on what
data one looks at and what one's risk judgement is.

>The origin of 55 was a gasoline shortage.

Yup. But saving gas was not the only consideration.

>After the
>shortage ended,

Who says it has ended? Gasoline is $1.75 a gallon here for the cheap regular, and the super stuff is pushing $2. And it's only mid May.

>the feds didn't scrap the 55
>because the safety nazis said the concurrant lower
>highway fatalities had to be because of the lower
>speed.

"safety nazis"? That's pretty tough talk, Bill, loaded with meanings. Would you call one of the people who supported 55 for safety reasons a "safety nazi" to his/her face? What if the person were a Holocaust survivor?

Who are these "safety nazis" anyway?

> They didn't want to hear that a gross
>decrease in miles driven had anything to do with it.

Was there really a decrease in miles driven? From what I read, there are more cars on the road today, and the average mileage they are driven per year keeps going up. I remember when 10,000 miles per year was given as a general average, for maintenace and insurance purposes. Then it went to 12,000. Now it's 15,000 in some cases.

The important statistic is "casualties per X miles driven".

The situation is far more complex. Lower auto casualties are the result of several causes:

- Safer cars (air bags, better seat belts, better handling, better brakes, better tires, etc.)
- Safer roads and more of them
- Safer drivers (less DWI, better driver ed, better enforcement, more use of seat belts)
- Lower speeds
- Lower traffic density

>
Opposing these are factors that tend to increase the casualties:

- Bigger and heavier trucks
- More and faster driving once the perceived crisis was over
- More distractions (complex stereos, car phones, people who do all sorts of things while driving)
- Less skilled drivers (inexperienced young people, older drivers with deteriorated skills, others with bad habits)
- More powerful and comfortable cars that give some drivers a false sense of

safety.

And these are just the ones I can think of right now.

>In the end the 55 limit was ended by BOTH popular
>opinion AND rational judgement.

I would say it was mostly pressure from public opinion. It's just simple physics that slower is safer. And until you get down to 40 mph or so, more energy efficient, too. But general opinion was that the benefits were not worth the cost in extra driving time.

If the givt. was really serious about 55, there's an easy way to enforce it. Just get a fuel-efficient minicar, paint it in bright colors, install a precision cruise control system and put flashing lights and the words "OFFICIAL PACE CAR" all over it. Then have a state trooper drive it down the highway in the left lane at a steady 56 mph. Anybody who passed it would be breaking the law, by definition. But to my knowledge no state ever tried such a system.

Overzealous safety advocates? Sure. "Nazis"? I don't think so.

No debate, Brian. I just pointed out that REACT has moved, at least to some extent, away from CB radio into other radio services. However, no, I don't want to see ARRL turn into some type of CB organization. But I really don't think a relationship between ARRL and REACT will do that. Many organizations have relations with a wide range of other organizations, but that doesn't necessarily change their emphasis.

N2EY wrote:

> Opposing these are factors that tend to
> increase the casualties:
>
> - Bigger and heavier trucks

I suspect that is a myth. We already know the occupant of a larger vehicle (SUV, Van, etc) will suffer less injuries in a accident with a smaller vehicle. However, based on what I've seen and read, the occupants of a larger vehicle will also suffer less injuries even when we're talking about vehicles of relatively equal size. In other words, in an accident involving two roughly equal size SUV's, the occupants will suffer less injuries than the occupants of two roughly equal small vehicles in a similar accident.

By the way, this pattern holds true even in countries where the typical vehicle is smaller than the typical American car. For example, in Germany, it is the larger vehicles (Volvo, BMW, etc) that have a much lower accident casualty rate than smaller cars (VW, etc), again even in accidents involving relatively equal size vehicles.

If this pattern is true, it is clear that larger vehicles (SUV's, Vans, etc) are actually much safer overall. And, if that is true, then government agencies are actually contributing to highway casualties by urging people to drive smaller vehicles. In other words, if highway safety is a real concern, than government agencies should be urging everyone to drive larger vehicles.

Of course, from the government's perspective, highway safety has to be weighed against fuel economy (pollution, etc). However, I'm convinced the government has gone too far in favor of fuel economy, sacrificing too much when it comes to highway safety. The larger vehicles (SUV's, Vans, etc) are a better compromise for all these factors than tiny cars that fall apart whenever a gust of wind hits them the wrong way.

> I would say it was mostly pressure
> from public opinion. It's just simple
> physics that slower is safer. And
> until you get down to 40 mph or so,
> more energy efficient, too. [snip]

Both of those (safety and energy efficiency) are based on a great number of factors - vehicle size, vehicle design, engine size, engine design, tire size, tire design, gear ratio, number of occupants, road conditions, and so forth. Therefore, it is very difficult to pick a single number (so many miles per hour) as best for anything beyond a very small sampling of vehicles. The larger the number of vehicles, the less accurate that number becomes. This is why proposed speed limits vary so greatly here and around the world.

Do you realize how many roads there are in this country, and how many "pace cars" would be needed to cover only a small percentage of

those roads? In other words, your idea is not very realistic (which
may be why no state has tried it).

writes:

>A SOUTHERN POEM
>

I don't know which came first, but Mike Cross does a song that is quite
similar:

ELMA TURL

Elma Turl was a beautiful girl
I'd love to have her for my wife
She's just the kind of woman

Who could make me happy
For the rest of my life.
But my Daddy said, "Son,
There's something you don't know
And it's something I think you'd oughter,
You see Elma Turl is a beautiful girl,
But Son, she's my daughter."

Alice Green is a beautiful thing
I'd love to have her for my wife
She's just the kind of woman
Who could make me happy
For the rest of my life.
But my daddy said. "Son,
There's something you don't know
And it's something I think you'd oughter,
You see Alice Green is a beautiful thing
But Son, she's my daughter."

Now I've been all around this country
Like a buck hunting for a doe
And it seems every girl I'd like to marry
Is a wild oat my Daddy sowed.
So, I went to my Momma with my head hung down
And she asked me what the matter could be
I told her my problem and she took my hand
And said, "Son, now listen to me.
You see your Daddy was such a good lookin' young man
And like an eager young stallion horse
His blood ran hot so you can't blame him
For letting Mother Nature take her course.
But you've got no reason to be upset,
Don't you worry, don't fret, don't bother
You see your Daddy ain't your Daddy
Though he thinks he is
So you can marry who ever you want to!

 O, I don't think so. Now 80,000 lb GVW licensing is common, 60 fot long
combinations too. And often as not the GVW's are fudged considerably.
Those things are about as easy to stop as a small freight train.

??? I thought everyone had had this experience - You're cruising well ahead of the 55MPH limit and find yourself catching up with the "pack", who for some reason turn out to be going -Surprise! 55 MPH. When you finally get to where you can see the source of the bottleneck, well, Surprise! again. It's a State Trooper, leading the pack at a legal double nickel, and gathering quite a following in the process. Then he makes an exit ramp, and just as soon as he's outta sight the race is, once again, ON.

RGR. Actually newsgroups are not all that hard to change - unless you are looking for a change for the better. What holds me back here is a lack of interest.

Are you trying to get me interested?

The balance to this argument is that these larger vehicles move more cargo without increasing the number of trucks on the highway. If we reduce the size of these trucks, the number of trucks have to increase to carry the same amount of cargo. Likewise, if we restrict the areas they can travel into, then alternatives have to be found to deliver the cargo (usually smaller trucks, and again in larger numbers to carry the same amount of cargo).

> That's not true in all cases - it depends
> on the accident. Many SUVs are more prone
> to rollover than smaller vehicles, for example.

Complex, to say the least. For example, to balance this, we could point out that drivers of smaller cars cannot see the road ahead of them as well as the driver of a larger vehicle, hence they cannot see changing road situations as quickly.

> But size isn't the only difference in those
> cars. Price is another, and that price often
> reflects more advanced technologies. Volvo
> has long included safety features in its cars
> that other cars don't have.

I wasn't talking about the expensive top-of-the-line export models. I was talking about the average priced models made by BMW, Volvo, Mercedes, and others, for their own European markets.

> No, that does NOT follow. You need to include
> factors such as accident avoidability. A small
> car that handles better may avoid an accident
> that a bigger car cannot avoid.

Again, this is balanced by the fact that drivers of smaller cars cannot see the road ahead of them as well as the driver of a larger vehicle, hence they cannot see changing road conditions as quickly.

> The time saved in a 100 mile trip by increasing
> the speed limit from 55 to 65 is just 17 minutes
> (assuming a steady speed from start to finish
> and allowing no time for acceleration/deceleration
> at the ends).

Seventeen minutes adds up if you're driving cross country, or commuting each day, or driving in an employment situation. For example, if you commute to work each day, and save only five minutes each day by driving 10 mph faster, you save almost 20 hours per year. Or, if you're driving across the country, you can save almost 10 hours (double that if the speed limit is 75).

> Point I'm trying to make is that radar
> enforcement only enforces the speed limit

> tickets does.

Please read my comments to Larry about other factors that have to be considered when setting speed limits, and enforcing speed limits.

> Interesting stuff, Dwight.

Yes, it is. However, I don't know how much more time I can spend on it - I have a ton of stuff I have to get done, and this conversation is really taking away from that. However, since I'm a dedicated speeder (I learned to drive on German Autobahns), and greatly enjoy traveling, I do enjoy discussions about speed limits and traffic situations in general.

My first foray into learning code was in the Boy Scouts. One of the older hams did a presentation on the code at a meeting. That made it pretty easy to relearn the code when I got my Novice.

I am not so certain as you are about what the future would have been had my
life been different than it was.

I can tell you that if I had not been code tested, my present speed would have
been zero if all the old timers didn't tell me why the mode is a fun and
enjoyable thing to use. Had they kept tossing up the things I see them tossing
on this forum, it would have turned this 13-year old kid off cold.

>The ARRL website alone is probably worth the dues.

It is a great site, but there are a number of other great sites, too (the League pages link to most of them).

I pay my dues because of the work of the DC office on spectrum issues. As I put it one year, the fact that Paul Rinaldo was sitting at the meeting when the little LEO threat on 2M was first put on the table justified my dues dollars that year.

I agree wholeheartedly, as would most hams. That is probably why those issues aren't discussed often here; we all pretty much agree on thier importance.

> The "code exam matter" has been offered the death knell by
>almost every major administration around the world, and it's continued
>existence (as a mandated requirement) past 2003 is nil.

All the more reason for those who want to promote the use of the mode in ham radio to switch gears now and start showing new hams how much fun it is to use and why it is worth learning. I did that to a group of about 200 folks in the QRP forum in Dayton when I talked about the fun hams are having with QRP.

It will start that way, Larry, but sooner rather than later someone will degrade it into "go soak your head." At that point, serious discussion is pretty much over.

What? Are you saying that you think Hans is sending a coutesy email of his posts to an individual to "showboat?" Why would you think that?

I think it more likely that his newsreader is configured to send an email copy to the recipient.

>   BAM! Another nail struck squarely on the head.

I bet my theory hits the nail a lot more squarely than any other. :-)

>Why would you think that?

You missed part, Ed. Jim's comments were along the line of "we were doing this in private e mail, why are you doing it in the NG also except to showboat"....not an exact quote, but I am not going to sift thru the old posts to dig it out...

Hans loves to send "private e mail" to me, too...sometimes it's a mirror of the NG, sometimes he get's original and sends it exclusive of the NG.

When I get a "Hans-O-Gram" anymore, I check the NG first to determine how to respond.

>I think it more likely that his newsreader is configured to send an email
>copy to the recipient.

Always the optimist. I rather think he enjoys being twice the annoyance.

>I bet my theory hits the nail a lot more squarely than any other

Perhaps. One could hope.

Sorry I didn't make Dayton...would have loved to made your seminar.

I think it was 1951 when I got my Xtal controlled Globe Scout, 65w CW,
55w AM. It was my Novice transmitter. I paid about $7 a month for it
which was about 1/3 of my income from sacking groceries. :-)

>

To what advantage or purpose? These services have nothing in common with Amateur Radio, other than the fact that radio transmitters are involved. Based on the use of radio transmitters, should ARRL also include baby monitor users, cell phone users, garage door opener users, and "invisible fence" pet control users?

Well then, think about it.

> car battery?

Indefinitely. I live in Texas and my batteries are charged by solar panels.
My entire ham station, including my 500w amp, runs from solar charged 12vdc
deep-discharge marine batteries. I can also charge my truck battery from
those solar panels. I know Morse code but I would be negligent to rely on
it for emergencies.

You know, there's probably lots of things Larry has never been forced to
do that he might like if he was forced. Beastiality comes to mind. :-)

I had an argument with my five year nephew over whether their CB
HTs were radios or not. :-) He said, "It's a walkie-talkie, not
a radio."

Larry envisions a brave new world where the only survivors are code-tested
hams who possess the entire radio spectrum and are masters of the lowly
no-code females. :-)

W6RCecilA says:

>More importantly, why did the Boy Scouts drop the Morse code merit badge?

I don't believe they ever had a Morse code merit badge. They had one called "Signalling" which included the use of semaphore flags, hand signals, and "flashlight Morse".

On the same topic, however, I think the requirements for the "Radio" merit badge would make a great syllabus for an entry-class radio license, much better than the current Technician class test. See below.

73, Hans, K0HB

Radio Merit Badge Requirements

1. Explain what radio is. Include in your explanation: the differences between broadcast radio and hobby radio, and the differences between broadcasting and two-way communicating. Also discuss broadcast and amateur radio call signs and using phonetics.

2. Sketch a diagram showing how radio waves travel locally and around the world. How do the broadcast radio stations, WWV and WWVH, help determine what you will hear when you listen to a radio?

3. Do the following:

a) Draw a chart of the electromagnetic spectrum covering 100 kilohertz (khz) to 1000 megahertz (mhz).
b) Label the LF, MF, VHF, UHF, and microwave portions of the spectrum on your diagram.
c) Locate on your chart at least eight radio services such as AM and FM commercial broadcast, CB, television, amateur radio (at least four ham radio bands), and police.
d) Discuss why some radio stations are called DX and others are called local. Explain who the FCC

and ITU are.

4. Explain how radio waves carry information. Include in your explanation: transceiver, transmitter, amplifier, and antenna.

5. Learn the safety precautions for working with radio gear, particularly Dc and Rf grounding.

6. Do the following:

a) Explain the differences between a block diagram and a schematic diagram.
b) Draw a block diagram that includes a transceiver, amplifier, microphone, antenna, and feedline.
c) Explain the differences between an open circuit, a closed circuit, and a short circuit.
d) Draw ten schematic symbols. Explain what three of the represented parts do. Find three electrical components to match to three of these symbols.

7. Do ONE of the following: (a, b, or c)

a) Amateur radio

1) Describe some of the activities that amateur radio operators can do on the air, once they have earned an amateur radio license.
2) Carry on a 10 minute real or simulated radio contact using voice or Morse Code; use proper call signs, Q signals, and abbreviations. (Licensed ham radio operators may substitute five QSL cards as evidence of contacts with amateur radio operators from at least three different call districts.)
3) With the help of a local amateur radio operator, talk to and properly log at least two Morse code radio contacts. Record signal reports. Explain how often amateur radio operators must give their call signs during a radio contact.
4) Explain at least five Q signals or amateur radio terms you hear while listening.
5) Explain some differences between the Novice Class and Technician Class license requirements and privileges. Explain who gives amateur radio exams.
6) Explain how you would make an emergency call on voice or Morse code. Tell why the FCC has an amateur radio service.
7) Explain handheld transceivers versus home "base" stations. Explain about mobile amateur radios and amateur radio repeaters.

b) Broadcast radio

1) Prepare a program schedule for radio station "KBSA" of exactly one-half hour, including music, news, commercials, and proper station identification. Record your program on audio tape using proper techniques.
2) Listen to and properly log 15 broadcast stations; determine for five of these their transmitting power and general areas served.
3) Explain at least eight terms used in commercial broadcasting, such as segue, cut, and fade.
4) Discuss the educational and licensing requirements and career opportunities in broadcast radio.

c) Shortwave listening

1) Listen across several shortwave bands for two 4-hour periods, one in the early morning and the other in the early evening. Log the stations properly and locate them geographically on a globe.
2) For several major foreign stations (BBC in Great Britain or HCJB in Ecuador , for example), list several frequency bands used by each.
3) Compare your morning and evening logs, noting the frequencies on which your major foreign stations were loudest during each session. Explain the differences in signal strength from one period to the next.
4) Discuss the purpose of and careers in shortwave communications.

8. Visit a radio installation approved in advance by your counselor (ham radio station, broadcast station, or public service communications center, for example). Discuss what types of equipment you saw in use, how it was used, what types of license are required to operate and maintain the equipment, and the purpose of the station.

It sounds like good reasons to know Morse code if you are on the high seas on a third-world cargo ship. Sounds like a lousy reason for keeping the Morse code testing requirement for landlubber hams.

I'd like to see either of you clowns try to copy CW at *any* speed being sent by someone who had never before keyed a rig. It would be unrecognizale as Morse code regardless of speed.

Evidently neither of you has ever taught a code class. Darn few people are ever able to form a dit or a dah at the outset, they invariably make it all sound alike until they're taught the difference and how to form each. Even learning that takes takes some practice.

Why does that matter? Is it nowhere known which are necessary to be
required since their attributes are not obvious? Of course that leaves
out all the ARRL's CB/Freebsand friends.

So then you would have been one of the code bashers who tell all us who

passed a code test how stupid we were to submit to that old hazing
ritual when we could have just waited our lifetimes for the rules to
finally change?

And extremely few truly appreciate the mode who wer not required to
learn it for licensing. A miniscule percentage, in fact.

If you disbelieve it you have been ignoring what you read here.

I'll assume that what you really mean is that the ARRL should cover
all hobby and/all personal non-commercial utility radio. Basically ham
radio, CB, GMRS, MURS & FRS. SWLing too? I flat out disagree with the
notion that the ARRL should become bogged down in anything beyond ham
radio. I wouldn't pay dues to an ARRL which dissipated it's assets to
support and serve the activities of radio hobbies in which I have zero
interest and I doubt that I'm alone on this one.

The "attitude" has been with us ever since the FCC turned the 11 meter
ham band over to the CBers almost a half century ago. Ham radio has
since grown enormously. Which obviously establishes the fact that ham
radio is not about to "die" because of some attitude thingey or
another.
>
Your problem is that you don't any grip at all on the trail of history
which has shaped ham radio and the ARRL so you come off with screwball
"ideas" which were kicked around and settled long before we were
blessed with you and Kim.

Except that his email and NG versions are not usually the same.
His NG version can contains personal attacks that are omitted in
his email.

I seem to bring out the worst in him -- one time, he got so mad
that he complained to my postmaster! Something about demanding
a public apology.

What was that about, Hans? I can't recall.

Clue: A new ham band at 5mHz is enroute. Clue: Frequencies below 30mHz
don't "belong" to the FCC so they can't hardly auction off"property"
they don't own. Query: When was the last time the FCC auctioned off
spectrum space because it didn't approve of the "attitudes" of the
current users of that spectrum space?

I didn't have to assemble mine.  A John Meck T-60-1.  You had bandswitching
you plutocrat.  Us Poor Boys had to use plug-in coils.

Jeffrey, you're suffering from Lennie-itis (evidenced by poor recollection of the facts).

In 1954 you could buy a Globe Scout from WRL for $99.95 (or 10% down, $7.95 per month) ready to pull out of the box, add a crystal, and play. I'd call the "plug 'n play".

Or you could order it in the kit version for $89.95 (or $9.00, $7.15 per month) and build it yourself.

Good luck on this one now!

73, Hans, K0HB

Of all the "ideas" put forth every day, this was pretty low on THAT scale, Hans. Of course, I expect you have pretty low expectations of just about anything, so I guess we will have to handicap your scores.

Please explain how it is courteous to someone to invite them to respond
by email and then post their own followup response to a newsgroup? When
I come over here, I see that Hans is fighting his battle of insults
unopposed. Seems like showboating to me, Ed.

Guess again, Jeff. It was available assembled for $10 more. At the
time, I didn't even own a soldering iron/gun and it would have
been a miracle if anything I assembled worked. I shelled out the
extra $10, bought it assembled, and it worked right out of the box.

Revenue.

If you were a business, and that business was declining in income over a period of years, it would behove you to explore more avenues of exposure to increase that revenue.

So you would hear a 3wpm 'SOS' being sent by a shorting a pair of wires together and tune right past it because it's not good code? - nice guy. Your final revenge will be screening disaster victims for their code ability and letting the slow coders die.

> Evidently neither of you has ever taught a code class.

Guess again, Dick. I taught code classes at Intel. Only one dyslexic person had a problem with a 'dit' VS a 'dah'.

Uh-oh, bend over, Dick is going to force everyone to relax and enjoy
the Morse code shafting. :-)

Exactly the same thing can be said about your favorite flavor of ice
cream, Larry. Who forced you to try that particular flavor?

> do so?

How would you ever participate in netnews if you never learned to type?

How would you ever know how good sex is if someone didn't force you?
How would you ever have developed a favorite flavor of ice cream
without someone forcing it down you for the first time? How would
you have ever learned to drive a car if someone didn't force you?
How would you ...? Well, you get the idea. People choose to do the
things they choose to do based on wants and needs and ROI, not usually
on outdated affirmative action program requirements.

Yep, that's the predictable reaction of ordinary human beings exposed to
your bullying techniques, Dick. You and Larry have probably discouraged

more people from learning and using Morse code than anyone else I know. One can only speculate about your not-so-hidden agenda in trying to alienate potential hams from learning Morse code. Don't you realize that in trying to monopolize the sandbox, the big guys may take the sandbox away from you and re-allocate the sand to where it will serve the most citizens?

>Dick N�BK

All you've done is say that amateur radio is above these other services. Your plumbing analogy is a non-sequitor. If the ARRL and amateur radio is to survive in the next century, they're going to have to explore more ways to expose themselves to people that have an interest in electronic and communications. Wayne Green, as much of a kook as he is at times, has been saying this for years.

Unliek you, Dick responded in an intelligent fashion. You, OTOH, can only throw childish temper tantrums and make ad-hominem attacks. If you act like a child, you will be treated as such.

He probably could handle it if the message traffic was sent by Morse
code. :-)

If this is to imply that I support the no-coders, it's true. If it's to imply
that *I* am a no-coder, or that I have no license at all, I think you should
know that I've been a licensed ham for over twenty years, and currently hold an
Extra class license, which I passed when the code speed was still at 20 WPM.
You can do a Google/Deja search through the past several years if you want to
find out what my callsign is. I no longer post it in the newsgroups.

If that were true, I guess there'd be some evidence of it. But since I never wrote anything of the kind, you sir, are in error.

Good luck with this one now.

Lots of STUFF to do at www.ab7sl.com such as...

All - NEW - W9INN antenna page!!

1. Ham Radio Links (some unusual)
2. Several Ham Radio Web Rings !
3.AB7SL Biography
4.Personal Photos
5.Station Description
6.Software Downloads
7.The DX Page (w / Telnet links)
8.Downloadable IOTA List
9.W7NH - Elmer Tribute
8.Prescott Arizona Page
9.Online DX Logbook
10.3D Art Gallery (downloads)
11.Music Page (downloads)
12.Frequently Asked Questions
13.Free-For-All Links Page
14.Guestbook
15.Equipment Photos
16.Downloadable DXCC Countries List
17.Downloadable ITU Prefixes List
18.W9INN Antennas Page

That'd kinda be like another non-profit, the Southern Baptist Church, re-writing their charter to become the "Southern Baptist and Eastern Orthodox Church" to increase revenue. Naw, they'd be better off holding a bake sale and so would ARRL!

Above is a judgement call, although I would make it, but different for certain. The plumbing analogy is right on point -- there is a difference between licensees and users. A dentist is something more than a dental assistant or a hygenist no matter how it makes the underlings feel; there is no patient benefit from pretending otherwise and certainly no long-term benefit to the American Dental Association from any charade.

1. Cross-marketing, which is what you suggest, has been in general a miserable failure. Do you have your checking/savings with your mortgage-holder? Do you buy your life insurance where you insure your car? Both cross-marketing attempts have been around probably longer than you have and with the single exception of State Farm have been universal duds.

2. Again I ask of what conceivable benefit is 'representation' to the
law-abiding user of FRS, CB, etc. What in hell does it even mean?

It is good when things that have potential are experimented with. I have
the Cobra 148 NW ST in the trunk of my car just in case I ever need CB. Oh,
by the way, try DFing an interfering signal on 2M or 70cm while
communicating with the other hams on CB! You'll nab 'em nearly every
time...LOL While I've not done this, I've heard the stories!

I've also communicated on CB about conversations that are taking place on 2M
(particular repeaters around town) and the tall stories that people tend to
get into for the "sake of ham radio." ;)

While I am picking rather willy-nilly as I choose messages to look at, I've seen no comments from anyone of a desire to "meld" CB into ham radio. Maybe I missed something.

Blending of the two radio services would just not be beneficial at all. CB has its purpose and its benefits--some of which make it as busy as it is and as abused as it is. As well, ham radio has its purpose and its benefits--some of which also cause it to be abused, and cause feelings of "superiority" to other radio services. However, none of the radio services should be "blended."

I have no idea if Jim Hanie had any input--you'd have to ask him. I do
believe that amateur radio has enjoyed a relationship with REACT for several
years in many areas. It may have been inevitable that an official MOU would
be signed. I can tell you that having REACT aboard as a partner in
emergency communications here in the Dallas area is a grand idea. Their
vans and service vehicles far exceed anything ham radio has in service here,

and could be of great value in a disaster/emergency. Yet another benefit, especially to the Dallas Amateur Radio Club (who hosted the signing), is that I believe REACT has an "in" to a nice, high building in downtown Dallas. This is pure supposition on my part--but that "in" could lead to a nice, high repeater site for the DARC's repeater (the Dallas County RACES repeater).

I don't share your opinion of the current status of ham radio or the testing. And I certainly have no agenda for "converting" ham radio into CB. Perhaps there are others who would fit your profile, but that would not be me.

In a way, the ARRL does "affect" those users, in the sense that regulations
concerning the use of the radio spectrum are of prime concern to the ARRL.
As stated before, the commercial use of spectrum probably has no basis for
representation from the ARRL.

To answer your question real quick: All the services you mention (not SWL) I think would be good candidates for a broader-based ARRL. We obviously disagree. I think that a more diverse ARRL is a stronger ARRL.

So because some parts of the globe may use CW for marine
use, that means what to the ham requirments?

> Many Third World countries

Then those countries are free to require morse of their
ham requirements if they think it will be of any use.
Last time I checked, no one had to monitor any marine
frequencies at all.

In my interpretation of the rules, fox-hunts are prohibited.
Section 95.416 limits transmissions to just 5 minutes, and
S95.412(a) limits them to a 2-way nature. [One-way is covered
by S95.412(c).]

Yes, and yes. So what's your point?

>Both cross-marketing attempts have been around probably longer than you have
>and with the single exception of State Farm have been universal duds.

Your really stretching on that one. No one is denying that trying to market meat to vegitarians is bound to fail. CB, amateur, and FRS, however, have a common ground that isn't being exploited. A lot of hams entered the hobby in the late 70s at the height of the CB radio craze. For awhile, that passing fad was the best thing to happen to amateur radio. Why not explore other venues?

>
>2. Again I ask of what conceivable benefit is 'representation' to the
>law-abiding user of FRS, CB, etc. What in hell does it even mean?
>
>Dick N�BK

Who knows? There may not be any. However, the exposure that amateur radio receives would be well worth the effort.

So, you think the ARRL's revenue has been declining? Just like the
total number of ham radio operators has been declining. Right.

He is more than likely correct, Dick. Too many signs indicate that publishing more than membership is supporting the ARRL. The great restructuring debacle managed to piss off virtually everyone, bringing home to roost claims of inside influence that did not exist to people expecting far too much. Note that ARRL conventions are now held at hamfests, much like two drunks supporting each other.

I suspect that the source of this string is the new Grand Poobah getting a briefing from the Accounting laddies.

Dick N�BK

I simply do not believe you. Virtually everyone can tell the difference between a 100 mS tone and a 300 mS tone. Most people can tell the difference between a 100 mS tone and a 200 mS tone. The only problem

I've seen with newbies is that the 'dah' is much longer than it should
be compared to the 'dit' but that helps copy rather than hindering it.

Kim,

Anyone who has an interest in amateur radio may become an associate
member. Only licensed radio amateurs may vote. Why, pray tell, would
an association chartered as a radio amateur organization embrace all of
radio communication?

...and I think you are the first "Dumbo of the Month" to also hold
honors as first runner up too. Please explain how your ignorance of
what the League is and does results in an attitude which can kill off
amateur radio. How does this sinister-sounding spectrum auctioning come

about? Why not take a few minutes to read the charter of the ARRL
before you manage to cram both brogans into your yap!

Don't sell yourself short, Kim. I think it could be you but only
through nearly complete ignorance. I believe that your ideas are not
simply stupid, they are enormously stupid.

OK Alan, as you have at least identified yourself and stated your outlook in connected sentences in something resembling civilized English, you deserve a civil answer.

1. Kim earned her killfiledom from me not because of her opinions but the

effort it took to figure out just what in Sam Hill they were. It long predates this thread.

2. You have changed the rules here: CBers getting techs presents no problem whatsoever; the thread up until then had the ARRL (of which I am not and have not been a member in a number of years) going out to 'represent' (whatever that may mean) every radio user that stalks the earth.

3. I am not retired. While I have been licensed since 1955 I am at the moment 57 and can't even tap my IRA/401k funds without penalty. I am quite gainfully employed.

4. While CB is a Land Mobile service meaning essentially that it encompasses virtually every non-Maritime (or broadcasting or aeronautic) use of radio in furtherance of non-Radio goals, it is not legally a hobby service. That distinction belongs to the Amateur Service and has since 1927. That it is attempted is obvious; as Dr. Johnson said (of women preaching) 'it is not that it is not done well but that it is done at all' that is the heart of the issue.

5. As you may or may not know, a lot of us are getting a little testy having been accused of everything from rape to mayhem for the sin of passing a code test. Whatever one's POV on that issue the fact remains that it will be the requirement for at least two years, probably four or five, and if it doesn't make it to the agenda soon, more like 15. There isn't a blessed thing the Amateur Community can do about it one way or the other. When there is reason to suspect that what we have is someone seeking to deconstruct passers of code tests to justify to themselves if not others not even making the attempt, the waste of time alone creates grumpitude. Sorry about that but the chaplain is down the hall.

6. My fear level has not moved at all. Wonder why that might be?

Very common problem for people just starting out. I'd be interested to know if he could tell the difference between a "L" and a "Y"?

Why don't you go back and re-read what I wrote. I'm talking about the attitudes
of certain hams, such as yourself, that will turn people off to amateur radio.
If you're so clueless as to think that I meant the ARRL in my post, then
perhaps you should be the one to received the aforementioned award that you so
proudly covet.

The correlation is easy to understand from just the League's motto:
"Of, By, and For the Radio Amateur."

>*Anyone* may be a member of the ARRL, and *everyone* has to pay for that
>membership.

That's always been true except non-licensed people who join are (or
used to be) given an Associate Membership.

Basic + 5 wpm get full HF operating privileges

In a notice from Industry Canada the Technical Requirements set out in the Radiocommunication Information Circular 2
(RIC-2), "Standards for the Operation of Radio Stations in the Amateur Radio Service", has been amended.

Effective May 19, 2001, this notice grants full operating privileges in all amateur radio frequency bands below 30 MHz
to amateur radio operators holding the basic and 5 w.p.m. Morse code qualification.

Copies of the revised RIC-2 are available from the Industry Canada web site at:
http://strategis.gc.ca/SSG/sf01226e.html

First, I don't think competition is a bad thing.

Second, I don't see any other clubs or associations out there
in credible competition with ARRL.

My good friend Don Stoner, W6TNS (SK), had the right idea when
he founded NARA ("National Amateur Radio Association" --
where have you seen those words lately), but I think Don made
a mistake when he tried to run it out of his own deep pockets.
It just never achieved critical mass.

But the competition would have been good for ARRL and Amateur
Radio.

73, Hans, K0HB

PS: Lest you dismiss Don as some sort of old timer with no vision,
he was the guy who sparkplugged the first Amateur Radio satellite,
OSCAR-1, and was a founding member of AMSAT.

Here an editorial from the NARA magazine "The Communicator"
- -

In My Opinion....

An editorial by Donald L. Stoner, W6TNS

In November of 1988, the Federal Communications Commission slipped a bomb into our hamshacks and lit the fuse.. The FCC announced they were reallocating a portion of the 220 MHz band to a new communications service based on a petition submitted by United Parcel Service. Our national organization, The American Radio Relay League tried to snuff out the fuse and get the decision reversed. But the 220-222 MHz part of the band is a goner!

How could this have happened? Well, for starters, we took the Amateur Radio Service and our fraternity for granted. It never occurred to us that the FCC might give some of "our" frequencies away just because we didn't use them.

The FCC even warned us of their intention. In 1984 Robert Foosaner was Chief of the FCC Private Radio Bureau. He indicated in a CQ Magazine interview that the band was not being used adequately. Mr. Foosaner flatly stated it might be assigned to other services. Unfortunately we didn't believe him .

I have a theory that the FCC confiscated these frequencies to send Amateurs a message. I believe the message is "shape up or ship out." Warm up the tar and start collecting feathers if you like, but in my opinion, the Commission did Amateurs an enormous favor. A two MHz slice of radio frequency spectrum is a small price to pay for awakening us from our long sleep.

The Amateur Radio Service is coming back to life after 20 or more years of being totally oblivious to the changes taking place all around us. Amateurs are starting to ask how they can contribute to the fraternity. They want to improve themselves and they want to see the service revitalized. They want more young people to enjoy Amateur Radio. Teachers, particularly those who are Amateurs, are beginning to realize how the service can be used to educate our youngsters in a number of disciplines.

This metamorphosis also happened to your humble editor in November of 1988. I've enjoyed Amateur Radio for almost 40 years. In the 50's and 60's I wrote a number of books and articles for Amateurs. I have also taken the Amateur Radio Service for granted. I'm as guilty as anyone. But that stopped when we lost part of the 220 MHz band. The National Amateur Radio Association became more than just a gleam in my eye.

What Are The Goals of NARA?

Broadly speaking, the goal of The National Amateur Radio Association is the promotion of ham radio. The organization has four specific goals within this broad framework. These are to a) publicize or market Amateur Radio to the general public, b) attract young people to the Amateur Radio Service, c) help existing Amateurs achieve the greatest benefit from the Amateur Radio Service and d) make Amateurs aware that our radio frequencies are in jeopardy from commercial interests. Here are some of my specific thoughts on these four areas:

Marketing Amateur Radio To The Public

Many people don't understand the significance of marketing and sales. The difference is very germane to this discussion.

Let's say you go into a ham radio store and tell the person behind the counter you want to buy an ICOM IC-781. He or she takes your order along with your money and hands you a radio. In this instance the person is simply an order taker and not even a sales person. A sales person tries to convince you to buy a specific product but they are not marketeers. The people who publish the brochures, run the advertisements and create your desire to own the IC-781 are the marketeers. Marketing creates the desire to have something.

For as long as I can remember, we hams have been order takers. We have not been salespersons and by no stretch of the imagination could be called marketeers of ham radio. If someone expressed their desire to be a ham, or an ex-CB'er convinced us they were a born-again communicator, we'd "take their order" and accept them into our ranks. Until recently, we never tried to be salespersons or marketeers for our hobby.

Deep down inside the human brain, is a little grey glob that scientists label the "I've got mine" lobe. In this area of the Amateur's brain is stored the feeling that we really don't want any more hams than we already have. We'll never admit it, even to ourselves, but the feeling is there. More hams equal more QRM, more problems with the FCC and more drift away from the way things used to be in the "good ole days."

More is not always better. More people with an Amateur Radio license may not have a positive or beneficial effect on the Amateur Service. We must mold and shape these people in the traditions that have guided us since the early part of the century. How we accomplish this will be the subject of articles in future issues of this journal.

Attracting Young People

When I was a kid, ham radio was a young peoples hobby. My best friend was a guy named Barry Windsor. Barry and I were fascinated by ham radio. We used to go over to Sid Dunn's house every Saturday morning. I never saw Sid without a cigar in his mouth. It was just another one of his appendages. When the end of his "stoggie" would get all goopy and slobbery, he'd line it up on the edge of the workbench, along with the other stubs, to dry out.

Anyway, Sid used to take time each week to teach us about ham radio. He'd work somebody in Upper Slobovia on 20 meters and our eyes would stand out on six inch stems. Then Sid would tell us the reason he could do this was (insert lecture here) his three element beam and how it worked, or the 304TL amplifier and how it worked, or radio propagation and how it worked. You get the idea.

Barry and I and some of the other kids pecked away at keys rather unsuccessfully trying to learn the Morse code. I lost track of the others but finally made the grade when the FCC, in their infinite wisdom, created the Novice and Technician license.

Somehow, someway, we must resurrect the magic aura that existed back in Sid's hamshack. Essentially, we must try to give something back to our fraternity in exchange for all the wonderful things it has given us.

It's not going to be easy! Today kids have computers, Nintendo games, cars, the opposite sex and Madonna, MTV and a million other distractions. We've taken the first step to redress the problem of attracting young people by creating a new "code-free" license. What this license becomes, and whether it is successful in attracting newcomers is entirely up to us. If we don't tell anyone about the Amateur Radio Service and how easy it is to become a ham, the new Technician Class license will be a "dud." In short, we must all make an effort to /b1 market ham radio to the public.

In marketing, you commonly give away a sample which gets the "hook in and set", to use a fishing metaphor. That's what the new Technician license can do that for our fraternity. It can be the "hook" that we use to attract people to Amateur Radio.

But we must get out and hustle the service to young people. That's where NARA comes in. We intend to tell our members how to recruit youngsters. We intend to print stories about how others have done it successfully.

We believe the place to recruit youngsters is in the schools as early as possible. Again, we are going to have a lot to say about our schools in future issues of "The Amateur Radio Communicator".

Helping Existing Hams

Like it or not, a lot of hams passed their written test simply by memorizing the questions and the correct answer. Why not? What's wrong with that? You memorize the code don't you?

But these hams are not particularly proud of the fact they don't understand the answers or even the questions. They are curious about the technical aspects of the Amateur Radio Service.

I have yet to meet a ham that does not want to improve him or herself. Some Volunteer Examiners have established classes to teach people how to become a ham. Who has a class to teach you how to upgrade from Novice/Technician to General? Very few, I suspect.

Each issue of "The Amateur Radio Communicator" will have a theory article. Hopefully they will be as useful and interesting to existing hams as well as to newcomers. If you have specific questions that you would like to see answered in this publication, send them to "Editor- A Touch Of Class".

Preservation Of "Our" Frequencies-

I put the word "our" in quotes. We seem to think of the radio spectrum as "ours." A number of bands of frequencies are loaned for our use, by the Federal Communications Commission. We can continue to use them so long as it is in the national interest to do so. Make no mistake about it fellow hams. The FCC did not let us use parts of the radio spectrum because they think we are nice guys or gals. They do so because it is more in the national interest to loan these frequencies to the Amateur Radio Service than to someone else. If that equation changes, more frequencies will be lost to other activities which are perceived by the FCC to better advance the national interest.

In November 1988, the FCC brought the point forcibly to our attention. They reminded us, once again, "If you don't use 'em, you're gonna lose 'em!" Some of our bands are barren waste-lands that we Amateurs seem to be saving for a "rainy day." Six meters is under utilized except for a few hardy souls in Southern California. The Commission knew the 220

MHz band was not adequately occupied. It won't be adequately occupied even when the FCC allocates the 220- 222 MHz portion for land mobile use. We have already lost the 902 MHz band and the fate of our satellite "S" band will be decided next year by the World Administrative Radio Conference (WARC) in Spain.

The 1296 band is priceless. Do you know of anyone who operates this band? Does your ham store have any 1296 MHz equipment in stock or do they have to order it? Is there a 1296 MHz repeater in your town. I doubt it.

If we maintain our "business as usual" approach, we are going to lose more frequencies. A lot more!

73, de Don, W6TNS

I think your comments about more license classes, code tests are DOA. The FCC spoke about those issues so get use to the way things are now, and stop wishing for "the good old days" to come back, they're not.

Skip? Not at all. These folks, thanks to modern technology, no longer need to be a human modem to send/receive the code. Thanks to computers and sound cards, even those who are no-code techs can send/receive code at 100 wpm, assuming the S/N is high enough of course. They too can enjoy morse cw as much as you and I. If you think that the only valid way to do cw is with a hand-key (maybe a rusty toggle-switch) and receiving with a pencil and paper, that becomes a personal problem, and not at all one having to do with licensing or technology.

Dunno, he gave up before we got to the four element characters. I, myself
get 'L' and 'F' mixed up to this day. Think of my embarrassment when I
send "Good Luck". I have a similar problem while typing. After 50 years
of typing experience, including awards for my typing ability, I still get
'D' and 'K' mixed up.

No, it dicn't. Are you advocating code testing for the entire population
of the USA including my pre-teen nieces and nephews? They are not hams,
Dick. Why should they be code tested?

Yes. People who don't know Morse code usually will get the characters
mixed up.

I didn't pick those two letters "L" and "Y" at random though.  They have
their dits and dahs transposed in a particular way - inverted.  "D" and
"U" have their elements transposed in a different way - reversed in
order.  In order to better understand the alleged "disorder", it would
be helpful to know these things.

>The title is the "American Radio Relay League."

It's been that way since 1914. The name does not have to include the word "amateur".

> No where in the title of the
>organization is amateur radio indicated, so why would anyone have a problem
>with including all radio communications?

Because the purpose of the ARRL is Aamateur Radio. Under the QST logo it has said "devoted entirely to amateur radio" since the early 1920s. The ARRL charter specifies it is an amateur radio organization.

But the main reason is simple: No one can serve two masters. The interests of other radio services are often in direct conflict with amateur radio. In other words, conflict of interest.

There's no problem with the ARRL having ties with other organizations. That sort of thing opens channels of communication with other services.

If FRS, MURS, GMRS, and other services need a national organization, let the users of those groups start one.

It was worse than that, Jim. I would send an 'A' or an 'N' and then ask him if that was a 'di-dah' or a 'dah-dit'. He couldn't tell me. I even tried asking, "Was that a 'short-long' or a 'long-short'? He couldn't tell me. This was 5wpm character timing. It was really frustrating. He passed the no-code Tech exam.

Bill:

In that case, don't ever visit California. You may not like your ham
radio operating conditions if you happen to be there at the wrong time.

BTW -- which hams with HF licenses would you exempt from the
requirement?

Cecil:

Of course I have. Fully 20 percent of the Senior NCO's I worked for in the Air Force were intelligent, motivating, honorable, and highly respectable leaders. The rest were either incompetent, uninvolved "career wonks" or vicious, autocratic egomaniacs with a penchant for latching onto pop-culture management concepts such as "perception is reality." I've you've never served as an NCO in the Air Force, I wouldn't expect you to understand. If that's the case, we have no need to discuss the matter any further.

>Dwight Stewart   (W5NET)
>
>http://www.qsl.net/w5net

Dwight:

The 40-plus mile stretch of I-95 that runs thru Philadelphia experiences hundreds of major accidents every year -- accidents which hold up rush-hour traffic far longer than any kind of "pacing" possibly could. If only the section between Wilmington, Delaware and the northern limits of Philadelphia were "paced," the overall effect could be to actually increase traffic flow by a significant factor -- not to mention the savings in lives. Reducing the overall speed of traffic in that area by 15+ MPH would also save more than enough fuel to cause gasoline prices to drop by several cents per gallon in that area. For the pace cars, all you need is a compact sedan with a 4-cylinder engine, a calibrated speedometer, a cruise control, and a police radio. No huge investment for a fleet of two dozen or so. The biggest expense would be wages/benefits for the drivers, who would obviously be employees of the state Dept. of Transportation. They would not have any arrest authority, and wouldn't need any -- they've got a police radio to notify the State Troopers of anyone who breaks the "congo line." Their only job would be to drive at the maximum speed limit and keep everyone behind them. Would you pass one of these guys, knowing that a guaranteed fine and lots of points on your license were the inevitable result?

Keep in mind, you'd only have to "pace" the two inside-most lanes of the highway -- where traffic runs the fastest. The two outside lanes are less of a problem because of traffic merging on/off the highway.

He couldn't! My point exactly!

>>Keep things like "operator choice" or "necessity" out of the equation.
>
>I think that the aspects of ham radio that are part of our examination
>requirements should be very much related to necessity.

Ok, fine! Let's put "necessity" back into the equation. How about
the "necessity" for amateur radio operators to be able to provide a
reliable back communications service, able to get simple message
traffic thru, regardless of conditions (availability of power, band
conditions, etc)? How does eliminating the ability for radio amateurs
to exploit one of the most practical, effective, efficient, and universal
modes at their disposal meet the "necessity" of emergency
communications? Or, a better question may be, how can this
necessity be taken care of by hams who are technically uninvolved,
unskilled in practical communications techniques, and basically
limited to what some "Elmer" has shown them about how their
off-the-shelf radio toy is used? How would one of them compare
to a well equipped, CW-skilled QRP operator who is capable of
setting up a low power station capable of indefinate operation in
spite of conditons in a local emergency site?

>> Let's assume that a situation arose where, in actual fact, the only
>> way to get any kind of message from point A to point B, considering

>> other mode.
>
>That assumption doesn't hold water. Digitial modes can have a 10-15 dB
>advantage over OOK CW.

Ed, I don't disagree with that -- digital modes would be MY first choice
as well, since I am quite experienced in using RTTY, PACTOR, and
PSK31, have the station equipment, and am thoroughly confident in the
capabilities of these modes. Either one would be MY first choice, without
a doubt. However, to use them, I have to provide 120 VAC electric
power to a computer, monitor, and multi-mode TNC as well as to my
RF gear. Now, if I'm limited to a few amp-hours of DC current a day,
how am I going to run all that gear? Let's say I'm using a common,
highly ubiquitous laptop -- it still at least doubles my current load on
what may be a very thinly stretched power source. Using CW, the
method of encoding/decoding the message requires no more of a
power source than whatever my own diet consists of at the time.
But, once again, I'll freely admit that I'm right with you on the digital
modes, and conditions permitting, they would be my *primary* choice.
My advantage is that I *have* a secondary choice to use as a
fallback mode.

>If you want a regulation that will guarantee what you

>
>How can the 10-15 dB better digital mode be effectively exploited if hams are
>not required to have a station that can use that mode?

Obviously, it cannot. Why would you need to ask such a question? I
don't recall making that an issue. What's your point?

Then their name should be changed to reflect it as such. There was such a
consideration to do this not too many years ago. It centered around removing
the word "Relay" form the title of the organization.

I had a strange happening regarding the military. I graduated from Texas A&M ready to enter the Air Force as an officer and had already passed the Air Force physical. My draft board called and "requested" that I report for an Army physical. I told them I didn't have to because I had already passed the Air Force physical. The lady on the other end of the phone said, "When Uncle Sam tells you to report for an Army physical, boy, you had better report". So I drove all the way to Houston from Carrizo Springs, TX to take the Army physical. I was pi$$ed at the time and checked almost all the boxes where it asked, "Do you have or have you ever had ..." That resulted in a trip to the psychiatrist who rejected me because of migraine headaches. I was classified 1Y and decided that military life was not for me. I was one of the few people who could join the Air Force but could not join the Army.

CW will not be eliminated, Larry. At worst, the Morse code exam will be eliminated. All the existing hams will be allowed to continue using CW. New hams will be encouraged to learn Morse code. The sky will not fall.

Cecil, you have some good company in the 1-Y (Women and Children First) category.

1. Dick Cheney
2. Me, for what amounted to chronic athlete's foot.
3. Mohammed Ali, until they lowered the requirement on a 100-question four-foil multiple choice exam from 25 to 17 and re-classified him 1-A.

I took the physical four times, passed three, and could have joined the Air Force, Army Reserve, and Air Guard but could not be drafted. On the fourth one, as yours a few weeks from granulation, I actually argued with the junior medic to get in but the senior medic got tired of the noise and threw my sorry ass out. Like yours, it was 'be kind to college grads' day and had little if any relationship to my actual physical condition.

a. It always amazed me how they could arrange a 35 mph wind at 42 degrees to blow inside a tight building over a bunch of sorry-looking guys in their shorts.

b. There was the classic Granny Lady from the state rehab who knew nothing about your 'problem' but offered you help anyway. You almost regretted saying no.

c. I took the AFQT (the 100 question exam) for a guy up from Missouri to volunteer for the draft. He was obviously completely illiterate. I got a 97 that day on mine, previous scores ran 96-99 so he arrived at Ft Leonard Mudd with a glowing test score. I hope the poor bastard survived but I have night sweats that he is on the Joint Chiefs somewhere.

Dick N�BK

>

Neither do I, in a commercial venture. But, competition for radio spectrum is another thing entirely and that is what I meant by competition. I couldn't tell you why, but I do think the naysayers of the hobby who claim it to be dying are, to some degree, probably right. There is more competition for radio spectrum, privileges, communications uses on the bands, commercial encroachment (though I don't think that is the threat many believe it is). If we all, as radio-enthusiasts, have one point of contact for resources/information on the radio hobby as a whole, I think that we then begin building a meaningful relationship with each other and recognize and respect our "mutual" interest--that of seeing that the radio hobby/vocation (whether that is FRS, GMRS, MURS, HAM, etc.) stays in the limelight and in the forefront of legislation for the hobby.

Would I rather see a CB organization or a REACT organization or a MURS organization pulling for the attention of the FCC or Congress? I don't think so. I'd rather see a united front from one organization on behalf of several interests. The ARRL is inherrently (at least one would hope) going to recognize that the radio hobbies in existence are there to stay and that they need to remain distinct and separate from each other. But, I also like the idea that one organization--after Directors' meetings and business decisions have been made and negotiated among themselves--is there in front of the FCC and Congress with the interest of radio spectrum being the main concern. Ham radio concedes nothing to CB radio, nothing to FRS, nothing to GMRS, etc. But, it is all represented under "one roof."

There's lots to be said for diversity--done the right way. That's the only *MAIN* concern I have for this whole concept is that I wonder if it could even be pulled off.

>
> Second, I don't see any other clubs or associations out there
> in credible competition with ARRL.
>

I think you were approaching the concept "competition" from a different angle than I had. I don't think the ARRL really has any competition. BUT, the hobby does, the spectrum does, the legislation does. *If* we could ever get radio enthusiasts to unite; think of the potential for the hobby/vocation, rather than commercial, focus on spectrum. Think of the inroads that many "other" radio services have made into our emergency and public service agencies! In many cases, a unity among groups gives more groups potential opening the door for even better volunteer services to our communities.

I don't think I would ever just presume that of someone; however, it's possible. I have at the time of this posting scanned the below editorial, and it sounds pretty darned intelligent to me.

Kim W5TIT

>
> Here an editorial from the NARA magazine "The Communicator"

>
> How could this have happened? Well, for starters, we took
> the Amateur Radio Service and our fraternity for granted. It
> never occurred to us that the FCC might give some of "our"
> frequencies away just because we didn't use them.

>
> The FCC even warned us of their intention. In 1984 Robert Foosaner was Chief of the FCC Private Radio Bureau. He indicated in a CQ Magazine interview that the band was not being used adequately. Mr. Foosaner flatly stated it might be assigned to other services. Unfortunately we didn't believe him .
>
> I have a theory that the FCC confiscated these frequencies to send Amateurs a message. I believe the message is "shape up or ship out." Warm up the tar and start collecting feathers if you like, but in my opinion, the Commission did Amateurs an enormous favor. A two MHz slice of radio frequency spectrum is a small price to pay for awakening us from our long sleep.
>
> The Amateur Radio Service is coming back to life after 20 or more years of being totally oblivious to the changes taking place all around us. Amateurs are starting to ask how they can contribute to the fraternity. They want to improve themselves and they want to see the service revitalized. They want more young people to enjoy Amateur Radio. Teachers, particularly those who are Amateurs, are beginning to realize how the service can be used to educate our youngsters in a number of disciplines.
>
> This metamorphosis also happened to your humble editor in November of 1988. I've enjoyed Amateur Radio for almost 40 years. In the 50's and 60's I wrote a number of books and articles for Amateurs. I have also taken the Amateur Radio Service for granted. I'm as guilty as anyone. But that stopped when we lost part of the 220 MHz band. The National Amateur Radio Association became more than just a gleam in my eye.
>
> What Are The Goals of NARA?
>
> Broadly speaking, the goal of The National Amateur Radio Association is the promotion of ham radio. The organization has four specific goals within this broad framework. These are to a) publicize or market Amateur Radio to the general public, b) attract young people to the Amateur Radio Service, c) help existing Amateurs achieve the greatest benefit from the Amateur Radio Service and d) make Amateurs aware that our radio frequencies are in jeopardy from commercial interests. Here are some of my specific thoughts on these four areas:
>
> Marketing Amateur Radio To The Public
>
> Many people don't understand the significance of marketing and sales. The difference is very germane to this discussion.

> I have yet to meet a ham that does not want to improve him or herself. Some Volunteer Examiners have established classes to teach people how to become a ham. Who has a class to teach you how to upgrade from Novice/Technician to General? Very few, I suspect.
>
> Each issue of "The Amateur Radio Communicator" will have a theory article. Hopefully they will be as useful and interesting to existing hams as well as to newcomers. If you have specific questions that you would like to see answered in this publication, send them to "Editor- A Touch Of Class".
>
> Preservation Of "Our" Frequencies-
>
> I put the word "our" in quotes. We seem to think of the radio spectrum as "ours." A number of bands of frequencies are loaned for our use, by the Federal Communications Commission. We can continue to use them so long as it is in the national interest to do so. Make no mistake about it fellow hams. The FCC did not let us use parts of the radio spectrum because they think we are nice guys or gals. They do so because it is more in the national interest to loan these frequencies to the Amateur Radio Service than to someone else. If that equation changes, more frequencies will be lost to other activities which are perceived by the FCC to better advance the national interest.
>
> In November 1988, the FCC brought the point forcibly to our attention. They reminded us, once again, "If you don't use 'em, you're gonna lose 'em!" Some of our bands are barren waste-lands that we Amateurs seem to be saving for a "rainy day." Six meters is under utilized except for a few hardy souls in Southern California. The Commission knew the 220 MHz band was not adequately occupied. It won't be adequately occupied even when the FCC allocates the 220- 222 MHz portion for land mobile use. We have already lost the 902 MHz band and the fate of our satellite "S" band will be decided next year by the World Administrative Radio Conference (WARC) in Spain.
>
> The 1296 band is priceless. Do you know of anyone who operates this band? Does your ham store have any 1296 MHz equipment in stock or do they have to order it? Is there a 1296 MHz repeater in your town. I doubt it.
>
> If we maintain our "business as usual" approach, we are going to lose more frequencies. A lot more!
>

I'm sure there exists, out there somewhere, a hardware and/or software
package available to hams, at some exorbitant price, that will actually
do a credible job of decoding Morse code under less than perfect

conditions.

I'm just as certain that almost none are in use by amateurs, nor are they likely to ever be. With very few exceptions HF ham rigs today incorporate two modes, same as they have for several decades now - SSB and CW (with FM thrown in as a bonus). The decoders in widespread use perform very poorly in less than optimum noise environments. If you've spent time decoding Morse on HF using any of the usual devices you know how flawed their operation is, under less than good conditions. If not, you can continue to fool yourself.

You and Cecil have a problem in common - As engineers you can't see past the shortcomings of all this wonderful technology. And I seriously mean "wonderful technology". I have a bit of lucre invested in it, and I use and appreciate it every day. But I remain mindful of what you have clearly forgotten- it is *NOT* foolproof nor failure immune. And its most theoretically effective rendidtions are not yet widely distributed throughout the general population of hams, by a hell of a long way. And it is very much questionable whether it will soon be so. THAT is why virtually all HF ham rigs today, still, incorporate two basic modes - SSB voice and CW.

Dick W�EX

```

> direct result of simple fear. Fear, you ask?...fear of what?! Well, it's been said that once attrition quells some of the rudeness, who'll "inherit" AR? Someone on QRZ posed this question and it simply went unanswered...could it be "other" group of radio "enthusiasts" who enjoy making worldwide contacts on hf? Hmmm, maybe the league has quietly answered that question.
>
> As far as attacking (Yes...attacking!) Kim for sharing her opinions, why be rude? If you disagree, say so and leave it at that. What a great bunch you are to set the example for others. I take it back, you guys probably aren't AR's "elder statesmen." You're just a group of retirees that hate to see the changes in your beloved service/hobby and have soured into mean old grumps. Dump someone in your killfile because you don't agree with their opinion. Put them there because they're abusive or obnoxious...like many of you have been, NOT because their opinion differs from the herd.
>
> As for the changing times for AR, the ARRL, and those "other enthusiasts"...be afraid...be very afraid. Adios!
>
> 73 de Alan
> Jersey City, NJ
>

Hi Alan:

Good thoughts. As far as my being "attacked" I appreciate especially your thoughts that sharing opinions is important; indeed it is. However, as I am unsure of how long you have "read" the posts in this NG, you need to be aware that I have unleashed at times here as well. I have a break of a couple/few weeks and picked up on the REACT/CB/LIFE OF ITS OWN debate here and decided to add my thoughts.

While I've always tried very much to remain civil--it can be very easy to get wrapped up in the only form of communicating that many here seem to be able to muster--that of attempting (notice I said attempting) to denigrate and humiliate someone because of their opinion. After all, (if I may snipe) CW is their quick, easy, efficient form of communication--and it carries through in their attempts to have intelligent communications here as well. The only way they can be quick, easy, and efficient in communicating here in the newsgroup is to be precise about whose balls they are going to try to whack and how quickly they can achieve that :) I, of course, have no balls and am not impressed by them, so their quips have little if any effect ;)

OK, now that I have that out of my system...thanks for your meaningful input. Good night : o

Kim W5TIT

Good thing you are not an engineer or else you wouldn't be able to
see past the shortcomings, huh?

When the answer to my question 'What does it mean to 'represent' radio users? To whom and for what?' came back as unknown but it was a good way to raise revenue I started to look for the looking glass I had apparently fallen thru.

When an idea we can't define becomes both a good idea and one I am myopic for not recognizing, it is getting beyond suspension of disbelief.

"When it's getting too kinky for other folks, it's just about right for me" says Richard Friedman leader of one of Willy Nelson's opener groups, Kinky Friedman and the Texas Jewboys. He can have it.

Kind of enjoyed They Ain't Making Jews Like Jesus Anymore tho.

THere been a number of times I would have liked to have had a chat with
some design engineer because of a glaring shortcoming in design that I
had to deal with. Sometimes economy is the cause. Other times it is
sheer ignorance on the part of the designer.

Assuming you mean the CW test requirement, I would
exempt all HF hams which is and always has been
my goal.

Cheers,

Err, you seem to have it backward. Modems would seem to be electronic versions of the ear and brain working in concert. Humans were copying morse aurally long before the modem was invented.

> Thanks to computers
> and sound cards, even those who are no-code techs can send/receive code
> at 100 wpm, assuming the S/N is high enough of course.

...at least their computers can send and receive it. It would be similar to being able to use a scientific notation calculator but not being able to work out the problem with pencil and paper.

> They too can
> enjoy morse cw as much as you and I.

They may gain enjoyment from it but certainly not in the same way that someone who has mastered the code gains enjoyment from it.

> If you think that the only valid
> way to do cw is with a hand-key (maybe a rusty toggle-switch) and
> receiving with a pencil and paper, that becomes a personal problem, and
> not at all one having to do with licensing or technology.

If you think differently, you would seem to have a personal problem.

T.L.--
I went back and read it again. I might suggest that you work on
crafting what you write so that it says what you intend to convey.
People don't get "turned off" to amateur radio because someone tells a
no-clue that the ARRL is a membership organization of radio amateurs.
Amateur radio doesn't die because I tell you that you are such a
no-clue. Spectrum auctions don't take place because someone tells
someone else that his view is out of step with reality.

I listen on 40 , 75 , 80 Meter and listen a lot Now I really wonder how long before all the testing stops and for a short time you just buy a ticket from the fcc. We lost 11 meters. to cb a few years back and look what happened. IT WILL ALL BE CB SOON .... JUST LISTEN This is the choice of all the big money Icom, Kenwood, Yaesu ect. Sell high tech so we do all the research, we make the big bucks, because no one has to know anything. Not electronics, not code, just turn it on and forget common courtesy, manners and language, I have to use headphones when scanning 75 or 80 for fear my younger family members will hear the restricted vocabulary. I have been reading some of these messages in this news group and also wonder what has happened to this hobby.

IT WILL ALL BE CB SOON
Think maybe we should clean up some of our ways
we can all find way to keep this a clean, educational fun hobby, and to help our communities

Well, perhaps it is a solution in your area. I don't live there, so I don't know enough about the situation to offer an opinion. I was talking on more general terms, not about specific roads or specific situations.

I don't think that most people can work out all of the functions of modern scientific calculators using a pencil and paper. Can you?

AH yes, the I-man's anthem. Yes dear friends, I AM in LA..that's Los
Angeles or LALA LAnd to those in the nose. I have tried the Len-meister
twice now..alas..nada. Guess his caller ID shows it's a payphone..but I
still have a few days. I have some nice pics of the Little Furhers QTH
.. not bad..not great but not bad.

Ran into some really bad WX both in Dayton and on the trip to Vegas but
such is life. If you can't go over or around...Set 'er down and ride it
out.

Today we'll try to establish contact from various stores in the area,
just to see if the weasel even picks up the phone. More pics of the area
as we tour the land the Upyours Furher calls da hood

Looks as though the ARRL Letter article was re-posted somehow. Take a look
at the REACT website http://www.react.org/. Doesn't look like much CB focus
there. Are there any REACT sites from elsewhere?

>GMRS, etc. But, it is all represented under "one roof."

True, but it's still a frightening concept to those who have made 11
meter-bashing a sub-hobby onto itself.

You and I took different things from Dave's comment. No, I cannot, and
I doubt if most people can. But wouldn't you be more assured that
whatever you were using was correct if you could work it out longhand?
If you have no idea how a particular calculator function works, how can
you be confident in the resulting answer?

It's the same as using CW on a computer.

I have thought about, a lot. And what I think is that you think much more like a CBer than a ham.
So just because licensefree CBers outnumber licensed hams by several multiples, we should just turn ham radio over to them.

I thought that would be your solution.

Actually, I think like Cecil Allan Moore, born Feb. 3, 1938 in the
Great State of Texas.

What is it about, "I don't believe that will happen ..." that you
do not understand, Dick? The point is to maintain Amateur Radio as
a desirable product so it won't happen. Your solution of requiring
20wpm (or whatever) Morse code exams will not make Amateur Radio a
more desirable product.

The text of my first reply fell into the bitbucket, I guess. Let me try again!

You're probably right Ed, but I think many folks can work out all the characters of a Morse code transmission using a pencil and paper. I've actually seen it done, and it wasn't a parlor trick either (I don't think).

All seriousness aside, the attraction to me of "manual" Morse operation is the practice of an arcane skill for my personal enjoyment. It may well not be a

particularly efficient use of my time, but it's plumb fun! Using a computer
(and before that, a Boehme keyer) I could probably send more precise (note that
I didn't say "better") Morse code, but that would also be a particularly poor
choice for communications efficiency, and besides wouldn't be much fun at all to
me, so I don't do it.

It also bears telling that I don't give a rats ass if another fellow passed the
same Morse speed test that I did, so long as he/she doesn't send faster than my
pencil can copy.

>Neither do I, in a commercial venture. But, competition for radio spectrum
>is another thing entirely and that is what I meant by competition.

OK. Makes sense - various radio services are competing for the limited spectrum. They are also competing for things like media publicity and people's time and money..

> I
>couldn't tell you why, but I do think the naysayers of the hobby who claim
>it to be dying are, to some degree, probably right.

Gotta do better than that! Give us some reasons and indicators of the "death" of ham radio. License numbers are up, exciting new rigs are on the market, new modes are showing up almost daily, all sorts of things. Last month I read about two hams who used a new mode to work EME with 10 watt transmitters, home-made software-defined transceivers and converted 10 foot TVRO dishes.

>There is more
>competition for radio spectrum, privileges, communications uses on the
>bands, commercial encroachment (though I don't think that is the threat many
>believe it is).

Sure - more applications. And existing services may have to lose some spectrum to make room for the new.

> If we all, as radio-enthusiasts, have one point of contact
>for resources/information on the radio hobby as a whole, I think that we
>then begin building a meaningful relationship with each other and recognize
>and respect our "mutual" interest--that of seeing that the radio
>hobby/vocation (whether that is FRS, GMRS, MURS, HAM, etc.) stays in the
>limelight and in the forefront of legislation for the hobby.

Whoa there. There's more to all of the above services than being a "hobby". And they are all in competition with each other!
>
>Would I rather see a CB organization or a REACT organization or a MURS
>organization pulling for the attention of the FCC or Congress? I don't
>think so. I'd rather see a united front from one organization on behalf of

Why? What does amateur radio have to gain from that?

>The ARRL is inherrently (at least one would hope) going
>to recognize that the radio hobbies in existence are there to stay and that
>they need to remain distinct and separate from each other.

They do - and the ARRL's purpose is to focus on the amateur radio service.

>But, I also like
>the idea that one organization--after Directors' meetings and business
>decisions have been made and negotiated among themselves--is there in front
>of the FCC and Congress with the interest of radio spectrum being the main
>concern.

You're glossing over the tough stuff, Kim. How is any sort of agreement reached by such an organization when the basic values and purposes of the different services you name are so different?

For example:

Who gets to vote for Directors - only licensed hams, or everybody?

What is the organization's policy towards widespread rules violations? The ARRL has always encouraged compliance with the letter and spirit of the law. In fact, the main reason we have Riley on the job is because the ARRL leadership kept asking the FCC for more enforcement. How do you think cb users would react to an organization that pushed for full compliance with all FCC rules regarding that service?

> Ham radio concedes nothing to CB radio, nothing to FRS, nothing to
>GMRS, etc.

How would this work?

> But, it is all represented under "one roof."

By definition, those working under that roof would have to divide their time among more tasks. For example, should the Lab begin testing non-amateur equipment and doing product reviews on it?
>
>There's lots to be said for diversity--done the right way.

I agree. And the "right way" is for the various services to have their own organizations.

> That's the only
>*MAIN* concern I have for this whole concept is that I wonder if it could
>even be pulled off.
>
I hope the answer is no. What would result is "a house divided".

You asked previously why there is so much animosity shown by some hams toward cb users. Here are some reasons:

- Hams get blamed for RFI caused by cb users
- Restrictive antenna ordinances aimed at cb users limit hams' antenna options.
- cb users who become hams sometimes bring with them behaviors and attitudes that damage the amateur radio service
- Hams have had to put up with restrictive FCC regs brought about by cb users' inability to follow the rules.
- cb begat freebanding, and freebanders are increasingly invading the amateur bands.

What has amateur radio gained from cb? Nothing of value.

--

To get a Technician class amateur radio license today, all that is required is passing a 35 question multiple-choice exam prepared from publicly-available Q&A

pools. This test has been passed by elementary school children - it's an entry gate, not a graduation certificate.

The license so earned enables the holder to use a wide variety of modes and bands with complete freedom. No other radio service offers so much for so little. The ONLY things that the other services you name can do legally that hams in the ham bands cannot do are:

1) Conduct business communications
2) Communicate with unlicensed users.

Why should an amateur radio organization use its resources to promote competing radio services, when such promotion does nothing for hams?

Dick Carroll <dixie@townsqr.com> wrote in message news:<9egii0$sim$0@208.207.71.173>...

> Atention Kim and HMN: It is well established that leopards cannot
> change their spots with whitewash. End of story.

No Dick,

It's really far from the "End of story." Just because you're unable to see beyond the only "ending" that you envision as fact certainly doesn't make it so. To steal an analogy from past poster...Get into your time machine and travel back, let's say, fifty years and find an AE circa 1950+/-. Now try to explain to that AE that in the year 2000, 5wpm & combined 120 multiple choice questions from a PUBLISHED test pool will "earn" you the very same AE. I liken you to that circa 1950 AE, Dick. "Impossible!" you say with a firm pounding of your fist on the table. Our AE friend said the same thing...and he was mistaken, just as you are now.

Well let's see, I now quite a few leopards that change their spots...and whitewash was NOT needed. I remember an old "roundtable" discussion that used to occur on 27.685MHz almost every morning. These elderly "freebanders" would ragchew for about an hour or so and casually discuss everything from the weather to their experiences on the ham bands. "Ham bands?!" Yes, Dick...not all the leopards are the young, irreverent, punks you seem to catogorize them as. So next time you visit your local ARC, be careful...you may be shaking hands with a leopard, albeit a quiet one. I myself know quite a few licensed hams who got their start on CB or, dare I say...well, you know where.;-)
The end of the story?...no way, far from it. Stay tuned Dick.

73 de Bert

>they need to remain distinct and separate from each other. But, I also like
>the idea that one organization--after Directors' meetings and business
>decisions have been made and negotiated among themselves--is there in front
>of the FCC and Congress with the interest of radio spectrum being the main
>concern. Ham radio concedes nothing to CB radio, nothing to FRS, nothing to
>GMRS, etc. But, it is all represented under "one roof."

I can't think of a *single* benefit to Amateur Radio under this scheme. Not a *single* one. Our organization (ARRL) would have it's focus diluted by several non-Amateur competing interests, and hams would become lumped (more than we already are) in the public mind into the same pot with "all those radio geeks" like freebanders, outlaw broadcasters, etc., etc., etc.

The potential conflicts are not trivial either -- just suppose someone petitioned the FCC that the CB bands ought to be expanded upwards to 29.000MHz, or someone petitioned for more MURS channels in the middle of the 75cm band. Would the "Amalgamated Radio Relay League" wear it's "Part 97" hat or it's "Part 95" hat when it when it sent comments to FCC?

While we (ARRL) ought to certainly cooperate with other organizations where we have common interests, putting these all under "one roof" because they happen to be non-commercial radio services would be akin to forming one master church consisting of Baptists/Lutherans/Catholics/Muslims/Budhists/ Mormons/Shintoists just because they all happen to be deity-based religions.

I'd have no problem with a "Council of Personal Radio Groups" where ARRL had a seat alongside representatives of other radio groups, similar to the seat we have at IARU, but I have *huge* problem with a membership-based "Master Radio Club" which would purport to represent hams along with all the other members with intests in other non-commercial radio services.

Or would it do what the Special Industrial Radio Service Association (SIRSA) - which formerly represented only the radio interests of the heavy construction industries - did when they amalgamated with / gobbled up the frequency coordination associations for almost all other industrial users.

They got the FCC to abandon the "industry" block allocation scheme
and go to a "pool" concept.

Problem solved ??

On Wed, 23 May 2001 15:13:20 GMT, Steve says:

>Same as it always was and always will be.
>20 WPM Extra Class, Two letter call.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 2.6.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 3.1 for the intense stupidity of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

I did that when they were originally considering the name change.

Fine. The next time someone asks me about amateur radio, I'll refer them to
this and the *.misc newsgroup so that they can find out about all of the
wonderful people that pervade it.

Right. How about WB2OSP, WA3RJX, or AA2QA? (my old call N2JH disappeared along with me during a 12 year lapse of license - the new one, AA2QA, was issued for 20 WPM). All a two letter call indicates now is either one obtained a new 2 letter call during the early 70s when extras were allowed to select a call sign (I did get N2JH when I moved back up from Pa) or they selected a call more recently and plunked down the fee to get it. How many true (originally issued before 1970) 2 letter call signs are still around? Perhaps a few, but I doubt many. A friend who tested me for my novice ticket back in 1962 was W2ZS. That was close to the end of those calls and he has been a silent key for a good number of years now. A two letter call sign or a 20 over 9 troll - all the same, doesn't count for much anymore.

All of 'em? No and I did not claim that ability. I'll go you one
better: I'll bet that a large number of current high school grads can't
do simple algebra problems without 'em. I've found many who can't even
make change without a cash register to tell them what the customer is to
receive in change.

The point was that anyone using a computer to send and receive morse
without bothering to actually learn morse is depriving himself of half
of the pleasure of using the mode--and the computer won't be able to
perform as well as his ears and brain would.

In article <9ef946$blt$2@208.206.142.80>, dixie@townsqr.com says...

>> >
>> > We KNOW what happened to 220. Why don't you?
>>
>> You didn't answer the question. I guess that's expected from someone whose
>> responses to intellegent dialog are the intellectual equivalent of diarhea.
>
>
> Thagt was exactly the correct response to a kook who only thinks his
>dialog bears some resemblence to intelligence.

...and exactly how much intelligence does it require to come up with some of
the smart-ass remarks you've posted? How much intelligence does it take to
heckle someone at a club meeting when they have the floor, and are trying to
make a point? (I have seen this happen) The only thing you, and people like
you, know how to do is to destroy. Anything that threatens your precious status
```

quo is considered a threat. This is the entire basis of the code/no-code debate that's raged for the past ten years. This is why amateurs lost the lower portion or the 220 band to the land mobile service. (According to an interview with one FCC official) This is also why potential new hams are turned off to amateur radio, let their licenses expire, or are licensed but are inactive and will probably not renew. Anyone who presents new ideas or challenges is labled as a "kook", "clueless", and/or a "whiney liberal" among others.

Amateur radio is not growing. This is not to say that the number of licensed hasn't increased, but that the people like you, Larry, and a few others have failed to make it grow. When was the last time you had a conversation with a DX station that was more than just a callsign and signal report exchange? When was the last time you had a conversation on HF with a stranger that consisted fo something other than the basic "Rig hr is..., WX hr is.."? Do you sit and complain about the "mexicans taking over 20 meters" at night, or have you tried to learn some Spanish and carried on a conversation with them? Or is your attitude more apathetic, choosing to communicate only with those hams that fall into your little "clique" of the spectrum?

Although I'm paraphrasing Walt Kelly when I say this, but those who claim that they really care about amateur radio, may be its own worst enemy.

Are you really saying that neither you or I can work out all of the functions
on our scientific calculators by hand, but we can be confident in the answers
if we can? Help me out, here, Dick; I just don't get the point.

>It's the same as using CW on a computer.

If so, then if you and I can use a calculator without being able to do all of
the functions manually, I guess you are saying that is okay that some people
use computers do encode or decode CW.

>'ll go you one better: I'll bet that a large number of current high school grads can't
>do simple algebra problems without 'em.

I'll take that bet. Lobster? :-)

I will check with a few high-school teachers in the area and see if we can administer:

2x=21 solve for X.

I bet most pass. I will select a relatively non-affluent suburb school; I think we can all agree that many of the city schools have problems of their own making passing kids from grade to grade without their having learned the material.

Want to go for the shrimp-cocktail appetizer on a group of 10 6th-grade grads?

I will go for the dessert on a group of recent Tech licencees.

>I've found many who can't even
>make change without a cash register to tell them what the customer is to
>receive in change.

As far as I know, they are still teaching Algebra in high school. I don't think they are teaching change making any longer.

>The point was that anyone using a computer to send and receive morse
>without bothering to actually learn morse is depriving himself of half
>of the pleasure of using the mode--and the computer won't be able to
>perform as well as his ears and brain would.

Absolutely agreed on the first part -- for me, Morse code operation is part of my Amateur Radio experience.

As to the second part, I can guarantee a computer will do better than I at 60 wpm. I think I can outdo it in noise, until I give up and stop copying. But I am also convinced that if decoding Morse code with a computer were important to the rest of the world, there would be code-decoding alogorithms that would beat me hands down.

For that matter, do you think a DSP-filtered code-decoding algo would beat me copying by ear in the usual 500 Hz bandwidth that hams typically use?

In general, I agree with you.  I do think, however, that it is very much in
Amateur Radio's best interest if ARRL maintains strong lines of communication
with those other aspects of the radio hobbies.

Brian,

I don't know if you remember Charles. He is the fellow who periodically stops by to start a real packet vs. internet gateway packet rant. He has hours of fanciful info on what civilized packeteers in Europe do vs what the barbarians here have thrown together. His trolling is stuck on the one topic. We're just not discussing the topic he'd like to veer toward.

Dave K8MN

Just to set the record straight, dyslexia is a problem of visual
scrambling, not aural.

You've got it bassackwards again. 9 of 10 persons who first try to send Morse code will sent all dits and seem to want to vary the spacing of those dits to encode. I always had to show them how to hold down the key to form the longer dah element. They soon pick up on it, normally.
But anyone with no Morse code training, attempting to send emergency traffic with a lookup table is doomed to instant failure.

Dang, that blows Cecil's buddy out of the water, the one who tried for
10,000 hours to get past 5wpm but just couldn't do it because of his
'dyslexia'.

I have seen something akin to it among people whose jobs require doing the same job mirror-image. They try to copy code as both a left and right-handed activity at the same time and end up inverting sense and sequence going from one side to the other. The cure is to put the off hand in the pocket and get the speed up to 16 or so. The two cases I remember were a house painter and a guy who worked on railroad air brakes.

It has somewhat the same effect but as Phil points out, it most certainly is not dyslexia.

Kim, feel free to reply of course but you are my one and only killfile on
this newsgripe in the interest of my blood pressure.  Unless, as in this
case, it gets repeated, there is no way I will ever know.  Just so you know
the debate is one-sided.

Toodle!

This thread started as a discussion about REACT which has been
supporting CB for decades and has now folded ham radio into it's scope
of activities. The common ground is being exploited, I don't see the
point to having the ARRL go into competition with REACT. Especially on
my dime as an ARRL member.

OK, if that is the reason you would not support an expansion of groups included in the ARRL's scope, I have one question. *If* the ARRL ever did move to a position such as this, don't you think that it would create less competition with other groups? And, if your dime as an ARRL member from amateur radio was not in any way sacrificed to another group of radio amateurs (they would all have their own "branches" ideally), would that be any different for you? I am right there with you on spending the money I offer as an amateur radio operator over on the CB side; I would not support that.

By the way, I don't know of the operations of REACT in other areas; but here in the Dallas area, for at least the past 10 years or so--REACT has been much more active in radio spectrum outside CB.

Still, the only person in my code classes who had a problem with a 'dit'
VS a 'dah' was dyslexic. He could tell a character was either an 'A' or
an 'N' but he couldn't tell the difference.

> truth but you had to go and spoil it.

Well, then I'm glad I did! Putting aside the question of why in the world anyone would bother to make up something about their first rig, "setting Cecil up" seems like a basically dishonest and underhanded activity. Do you worship some cheap offbrand Lord? Most of us would consider "setting Cecil up" to be not very honorable. I guess I feel pretty darn proud of myself for having spoiled your childish attempt.

Ed:

If that's true, why didn't I appreciate this "incentive" during the 14 years I spent avidly objecting to the code testing requirements? I have always been a reasonably intelligent, objective, and insightful person. Why did the obvious benefits and advantages of the Morse/CW mode totally escape my notice before I finally decided to apply myself to meeting the code testing requirement in order to become an HF phone operator? Heck, I was an Extra-class ham for almost nine years before I gave up on the concept of talking into a microphone below 30 MHz! During that time, I probably wasn't anywhere near as adamant about supporting the concept of code testing as I became in the early 90's with the coming of no-code licensing for the Technician class, and my first exposure to computer BBS's, Packet Radio, and the no-code whiners thereon.

Please do us all a favor, and keep the newsgroup apprised on your efforts, successes, and failures with regard to showing prospective hams the "self-incentives" of Morse/CW operation. That is, to those who "truly appreciate the mode," of course! To those who don't "truly appreciate the mode," please explain how they can gain that "appreciation" in the absence of a code testing requirement.

Ed:

In my earliest days as a ham, I never had any of the "old timers" I knew telling me what a wonderful thing CW was. Most of my Elmers were primarily phone operators, with the exception of Bill "Elmer" Irwin, WA3ZMY (SK), who showed me the advantages of CW without blowing a lot of sunshine about it. However, they all emphasized that it was a necessary thing to learn, if only to pass the tests and gain the privileges I sought. It wasn't until after I learned CW at a high enough proficiency level to see its benefits for myself that I became truly enthusiastic about this mode. To this day, I am still not a 100-percent CW operator -- I spend much more time using digital modes like RTTY and PSK31. However, I actively support code testing requirements at a useful proficiency level, for the sake of keeping radio amateurs fully capable of exploiting the many benefits and advantages of Morse/CW which I have learned from first-hand experience. Without the testing requirement in place at the time I was licensed, I would not have had this experience -- and no "Elmer" could have possibly convinced me to invest my valuable time in learning it.

Since you say Morse/CW is its own reward, please explain to us how you, personally, intend to get people to give it enough of a fair learning effort to produce at least 10 percent of hams capable of using CW effectively at 18 WPM -- the same speed used by W1AW to transmit the CW bulletins.

Tom:

The term "no-coder" does NOT specifically refer to an individual who has not passed a code test. It refers to a person who does not support the concept of progressive code testing at pre-Restructuring speed levels, for amateur radio licensing. It also refers to anyone who whines about code testing as a barrier to amateur radio licensing at any level. I took the liberty of defining this term in the old Fidonet Ham Radio echo almost ten years ago.

>You mean incentives like affirmative action programs?

Cecil:

Affirmative Action programs are not incentives -- they are unearned rewards given to undeserving clients of a Welfare state in return for the votes which keep the givers of these rewards firmly ensconced in their positions of political power, influence, and wealth. They are a cynical approach to purely individual personal situations which the government has no rightful role to influence the outcome. Affirmative Action programs are the best possible expression of the weakness of people who choose victim status over personal motivation, initiative, and a sense of responsibility to themselves, their families, and their communities. Government assistance is the last resort of those who have given up -- usually before even trying.

The Morse code testing requirements are NOT an Affirmative Action program. That is your delusional view of them, not reality. Affirmative Action programs give away privileges, without requiring anything of the rewardee other than being lucky enough to be born of a particular race, sex, creed, color, ethnic origin, or sexual "orientation." They are strictly political rewards, not valid requirements. If you can't understand the difference, then your "logical" abilities leave much to be desired.

>are ever able to form a dit or a dah at the outset, they invariably make
>it all sound alike until they're taught the difference and how to form
>each. Even learning that takes takes some practice.

Dick:

Exactly. The few times I've taught code classes, the first class wasn't involved with learning any characters at all. It was strictly in teaching the difference in sound between a "dit" and a "dah" at various speeds. For example, the slowest "dit" never sounds like any kind of a "dah" -- no matter how fast that "dah" is sent. But then again, I also never use a Farnsworth speed lower than 16 WPM, so my students start off learning "whole character" sounds, not trying to analyze "dot-dash" patterns. My more motivated students usually had the light go on for them a whole lot faster than for people who didn't bother explaining a few basics of Morse code before teaching letters/numerals.

The notion of someone without a considerable amount of training and practice trying to send CW from a chart, particularly under "emergency" conditions, is simply ridiculous. It would require an exceptionally precocious individual to send a readable message in that manner -- but they wouldn't have a prayer of copying a response in any manner other than transcribing "dots" and "dashes" they had marked on paper as received. Even then, they wouldn't likely be able to discern spacing between letters and words. The process would be so agonizingly slow as to be virtually useless under any but the most stable, non-emergent conditions. A true 5 WPM proficiency level, assuming a reasonable Farnsworth value of between 13-16 WPM, actually would be useful, albeit marginally so, compared to "look-it-up-and-send-it."

Cecil:

I don't think I could! How does that nullify my pro-code testing arguments?

>How would you ever know how good sex is if someone didn't force you?

I don't recall that pretty young girl having to "force" me! How does that
nullify my pro-code testing arguments?

>How would you ever have developed a favorite flavor of ice cream
>without someone forcing it down you for the first time?

I don't recall ever being "forced" to eat ice cream (when I used to eat it,
before I became aware of my lactose intolerance). How does that
nullify my pro-code testing arguments?

>How would
>you have ever learned to drive a car if someone didn't force you?

My main problem with learning to drive was "forcing" my parents to
let me have more time behind the wheel! How does that
nullify my pro-code testing arguments?

Actually, I don't! What *was* your point, Cecil? If one was there,
it totally escaped me!

>People choose to do the
>things they choose to do based on wants and needs and ROI, not usually
>on outdated affirmative action program requirements.

Tell that to the people who hired lesser-qualified job applicants than myself
based on "outdated affirmative action program requirements."

Cecil:

I don't see how Dick and I could possibly have affected more than a few potential "code learners" at most. At the very most, all we've done is give them another excuse to whine and complain about something they had no intention of bothering themselves with in the first place.

>One can only speculate about your not-so-hidden agenda in trying to alienate
>potential hams from learning Morse code.

Hey, I have absolutely no notion of being able to encourage anyone to use the Morse code. I don't believe I could convince anyone to become a code-proficient ham any more than you could convince me to try bungee jumping. A prospective ham has to try CW based on a need to do so. Once a fair trial is given, it is a proven fact that a certain small number who *do* try will gain sufficient proficiency to see for THEMSELVES all of the benefits and advantages of the Morse/CW mode. For reasons I've stated many times in this NG, I favor the requirement because it is the best way to ensure that the ARS will continue to have amateurs who can exploit the benefits of Morse/CW. Without the requirement, it is virtually impossible to overcome the objections to learning the Morse code, in view of the overwhelming need for most prospective hams to achieve the instant gratification of the kind of personal communications power that can be achieved with a microphone. When you ask people to delay that gratification, you're usually not going to win many arguments in favor of a mode which requires a considerable committment of personal time and effort to master at a useful level of proficiency.

>Don't you realize that in trying
>to monopolize the sandbox, the big guys may take the sandbox away from you
>and re-allocate the sand to where it will serve the most citizens?

Cecil, that's going to happen anyway. How is dumbing-down the requirements for amateur radio licensing going to stop it?

Please explain why someone who doesn't appreciate the mode should
be forced to use it. There are lots of coded hams who don't
appreciate the mode and never use it. Would you appreciate the
food you hate the worse if someone forced you to eat it?

It's the same old BS the codekillers (whatever their stripe) always
come up with- "let eeryone choose which of he requirements they want to
adhere to".
Yes, Sadly, Ed ia a functional code killer in his present role. He
can't help it, that's the direction ARRL, FCC and all the avant garde
are headed today. He's along for the ride, and if he doesn't want to get
off he follows the script.

Of course it is, Larry. It is a violation of the free market just
like any other affirmative action program. It is simply a social
engineering project like all the other social engineering projects.

What is wrong with a free market of modes in a hobby in a free society?
What is wrong with live and let live?

You didn't answer the question, Larry. Who forced you to try your
favorite flavor of ice cream for the first time? Personally, I
think CW is better than ice cream.

On Tue, 22 May 2001 09:33:28 -0500, W6RCecilA says:

>Jeff considers it to be great sport. :-)

Jeff seems to have some sort of crisis of credibility and truthfulness.

On one hand he admits that he is trying to "set you up" to check your truthfulness (as if you would bother to lie about what kind of rig you first owned).

On the other hand, in contrast to this "honesty check" he'd perform on you, he has a history of spoofing the FCC to obtain a Guam (KH2PZ) call sign for himself, and cooperating to obtain several KH6 calls for a fellow in Rhode Island, places where they respectively did not reside.

Odd!

73, Hans, K0HB

Who says "10% of hams capable of 18wpm" is necessary?
Can you spell d-e-m-i-g-o-d ?

Uhhhhhh Larry, this newsgroup is world wide. Many potential hams have
probably given up their interest in ham radio in disgust because of
your postings.

> Hey, I have absolutely no notion of being able to encourage anyone to
> use the Morse code.

That's pretty obvious, Larry. All you ever do is discourage.

> Cecil, that's going to happen anyway. How is dumbing-down the
> requirements for amateur radio licensing going to stop it?

Earth to Larry: The FCC has said, in so many words, that Morse code
skill is unrelated to being smart or being dumb. Your smart VS dumb
charade has ended and you haven't realized it yet.

From Webster's New Universal Unabridged Dictionary:

"no-code - a directive not to alert a hospital team to perform emergency resuscitation on a particular patient."

No mention of your definition, Larry. You apparently didn't do an adequate job of defining it.

That's not what I propose but even that sounds better than your plan
to destroy the ARS through attrition.

Maybe the old idea of CBer's getting their tech's and joining the league has more merit than meets the eye. One could possibly view all the downright rudeness I've read from AR's "elder statesmen" as a direct result of simple fear. Fear, you ask?...fear of what?! Well, it's been said that once attrition quells some of the rudeness, who'll "inherit" AR? Someone on QRZ posed this question and it simply went unanswered...could it be "other" group of radio "enthusiasts" who enjoy making worldwide contacts on hf? Hmmm, maybe the league has quietly answered that question.

As far as attacking (Yes...attacking!) Kim for sharing her opinions, why be rude? If you disagree, say so and leave it at that. What a great bunch you are to set the example for others. I take it back, you guys probably aren't AR's "elder statesmen." You're just a group of retirees that hate to see the changes in your beloved service/hobby and have soured into mean old grumps. Dump someone in your killfile because you don't agree with their opinion. Put them there because they're abusive or obnoxious...like many of you have been, NOT because their opinion differs from the herd.

As for the changing times for AR, the ARRL, and those "other enthusiasts"...be afraid...be very afraid. Adios!

Just what, exactly, would this perceived competition be? Why would the ARRL
turn it's back on potential new hams and, subsequently, new members?

Clue: The use of the word "auction" was a metaphor, not intended to be taken in
a literal sense. And to answer your query, what do you think happened to 220 to
222 Mhz?

Yup, just like today, and I encourage all those who want HF priveleges to meet the requirements today instead of waiting it out. I think any additional changes to code-testing in the US will take years and there is a lot of fun to be had in the meantime.

I hope it don't happen the point was we as HAMS have to take care of what little is left. WE need to keep the hobby clean , promote activities that keep the hobby in the publics best eye. maybe 20 wpm is not the answer but any one can do 5 wpm it keeps some kind of standard and also as said will most always get through when conditions are bad. even qrp. I do believe we should keep a repor with 11 mtr as in some cases working together works better as when emergency. happens we as ham can handle most of the relays while cb can handle relay among non hams with a liaison we can work together.

Let's put it to the test. I will ask my wife to key my rig one evening on 20 meters and then again on 40 meters. We will see how many people can copy what she sends. You game?

Neither the FCC or the VE process has tested sending for decades. Without a forced code-sending test, how are people learning to send?

Let's put it to the test. I can take 10 non-hams from the ARRL staff and give them a code key and ask them to alternate dits and dahs. I will record it to a .wav file and post it to a URL. We can let the very court of public opinion here address whether people can send dits and dahs without your showing them how to do it.

Of all the lives saved by ham radio, what percentage have been saved by Morse code communication?

If the goal of regulation is to save lives, it would be a much more effective regulation to require that all hams maintain emergency communications capability on HF and VHF at all times. Did you propose that to the FCC when you sent your comments for restructuring?

>From: yodoc@aol.comnospam (Larry Roll K3LT)

>How about the "necessity" for amateur radio operators to be able to provide a
>reliable back communications service, able to get simple message
>traffic thru, regardless of conditions (availability of power, band
>conditions, etc)?

In the first place, there is no way that one can make such a guarantee.

If the goal is as you state, however, then it would be a more effective regulation to mandate that all hams must maintain emergency communications capability on HF and VHF.

If the goal is to be based on mode and factors like band conditions come into play, then mandating one of the FEC digital modes would ensure maximum reliability.

>How does eliminating the ability for radio amateurs
>to exploit one of the most practical, effective, efficient, and universal
>modes at their disposal meet the "necessity" of emergency
>communications?

I do not think that we should eliminate such ability. Morse code and OOK CW should remain a legal amateur mode, IMHO.

>Or, a better question may be, how can this
>necessity be taken care of by hams who are technically uninvolved,
>unskilled in practical communications techniques, and basically
>limited to what some "Elmer" has shown them about how their
>off-the-shelf radio toy is used?

I don't believe that the ham you describe represents more than a tiny percentage of hams. And of those that do, their ability to provide communication in times of emergency will not be magically created if they learn Morse code.

>How would one of them compare
>to a well equipped, CW-skilled QRP operator who is capable of
>setting up a low power station capable of indefinate operation in
>spite of conditons in a local emergency site?

So are you suggesting that the rules should be changed to require all hams to be well-equipped and run QRP and set up local emergency sites? Did you include that in your comments to the FCC?

>However, to use <digital modes>, I have to provide 120 VAC electric
>power to a computer, monitor, and multi-mode TNC as well as to my
>RF gear.

Most TNCs today operate from 12 VDC. Laptops operate nicely off of batteries.

>Now, if I'm limited to a few amp-hours of DC current a day,
>how am I going to run all that gear?

If you really care about emergency communications, improve the power reserve of your batteries.

>Let's say I'm using a common,
>highly ubiquitous laptop -- it still at least doubles my current load on
>what may be a very thinly stretched power source. Using CW, the
>method of encoding/decoding the message requires no more of a
>power source than whatever my own diet consists of at the time.

But you can gain 10-15 dB by using the digital mode, so you can cut your transmit power drain by at least 10...

>What's your point?

If the goal of the regulation to maintain Morse code testing is to enhance emergency communications, my point is that there are better regulations to accomplish that goal.

I agree. Although I think that ARRL should maintain ties with those other radio services, no organization can serve two masters.

But it is hard to know where to draw that line. One fact of life in modern spectrum allocation is that all spectrum is shared. What would be a better sharing partner on UHF or microwave -- ISM/Part 15 or FRS, MURS or GMRS?

Actually, the League DID make a name change -- the official name of the organization is now ARRL.

I think the opposition to any major name change was pretty strong. I proposed "Amateur Radio Relay League," to Tom, but I didn't get my way. Hey, does that mean I should hate the League now? :-)

Richard McCollum <rmccollOMA@worldnet.att.net> wrote:
>He is more than likely correct, Dick. Too many signs indicate that
>publishing more than membership is supporting the ARRL.

What signs? One issue of QST each year makes the League's financial records public knowledge. Did you notice something in the last published accounting that you consider a "sign"?

Don't forget that publishing was one of the original stated purposes of the League in its 1915 charter:

"Article 2. The purposes for which said corporation is formed are the following to wit: The promotion of amateur radio, the organization of amateur radio stations, the promotion and regulation of amateur radio inter-communication, and the relaying of messages from station to station, and the printing and publishing of documents, books and pamphlets necessary to any of the above purposes."

Thank goodness they are a publishing house -- this amateur's amateur would have been quite lost without my shelf of League books and manuals. I began collecting League pubs back in 1962; even as a young-pup they helped me make sense out of the mysteries of the radio science.

Cecil:

I see. Now, what does it say for "no-coder?" That's the term I defined, not "no-code" as in a DNR (medical slang for "Do Not Resuscitate) or "No-code Tech."

OK, then, how about 2 percent? What percentage of hams who
took the 5, 13, and 20 WPM code tests do YOU think became
active CW operators? If I had used the same percentage figure,
would you still have called me a "demigod?"

Cecil:

I heard something about that, but knowing Gov. Glendenning and
his attitude toward the Second Amendment rights of the citizens of
his state, the "gun safety" classes will probably include instructions
for the kids to turn their parents over to the police if they keep any
kind of firearm in the house, no matter how securely stored.

Cecil:

Their problem, not mine. If they're foolish enough to give me that kind of power over their lives, then they probably wouldn't have made very good hams anyway!

>> Hey, I have absolutely no notion of being able to encourage anyone to
>> use the Morse code.
>
>That's pretty obvious, Larry. All you ever do is discourage.

Actually, Cecil, I don't knowingly do either. The vast majority of prospective hams usually have endless excuses and rationalizations for not learning the code anyway, so I can't see how I am a significant part of the equation. I may be one of many such excuses for the relatively few hams who read this NG, but I hardly think I can be given the amount of credit you're heaping on me!

>> Cecil, that's going to happen anyway. How is dumbing-down the

And you, like a good little lemming, blindly believe everything your Mommy the Government tells you. Personally, I take half of what the government says with a grain of salt; I take the other half with two grains!

>Your smart VS dumb
>charade has ended and you haven't realized it yet.

Charade? Explain yourself. Everything I state here is my own personal opinion, is written in clear, standard English, and isn't intended to be deceiving in any way. Admittedly I do utilize a lot of tongue-in-cheek humor, so it is up to the reader to be intelligent enough to know what is editoralization, what is satire, and what is both. I participate here for my own amusement, and attempt to be informative and entertaining to whomever reads my posts. I don't believe in or practice the standard forms of Political Correctness which seem to be the norm of our popular culture these days, so, to that end, I can understand why a certain few may not necessarily appreciate what I write here. That, however, is THEIR personal problem.

You're right about the focus being diluted, absolutely! *If* the approach
were wrong, the business principles were wrong, and if the wrong people were
put in place to administer a program as energetic as a multi-group
organization.

>

>

The American Radio Relay League would have had several meetings on the
matter, with the amateur radio focus remaining exactly as it has and

should--in the interest of ham radio; and that the particular "other" service would have its focus exactly as it has and should. Both would make their arguments to the FCC or Congress, and the decision would be made. In the meantime, what would hopefully be understood and what would be happening between the radio services' leadership would be that we can all exist, we can all defend our positions and we can all respect each other. Some of the desires of other services may not be so far fetched. For instance, and I hazard to mention this because it will split this discussion off onto another entire path, what about 1.25cm? Is it *really* all that used/needed by amateur radio? Couldn't some sacrifice of band be made for MURS, or for FRS, or whatever?

>

>

The analogy is interesting, but I think you're comparing a little high scaled there. Radio groups most fervent interest is in maintaining radio spectrum, having representation to the FCC and to Congress, etc. There's too much interest and common ground to ignore it forever. Imagine a group of hams, CBers, FRS folks, and GMRS all getting together in a community to present a forum on radio communication to kids at school? By doing this, the vision the public has of us now (as an entirely argumentative and divided set of people) would change drastically for the better.

Hmmm, now get yet another group such as you mention above, and focus really *does* begin fading.

Re NRA:

A Letter From 50 Years Ago:
  "For more than fifty years, the National Rifle Association
has been devoted to the promotion of rifle marksmanship
as a part of American preparedness. Your organization
provided an important contribution to the readiness of
America before World War I. In that war, many instructors
who were members of the National Rifle Association, brought
to the service talents and knowledge which were vital to the
proper training of a citizen army.
  It is my conviction that America's heart is strong, that
America's soul is sound, and that America's spirit is equal
to the challenge of this dangerous decade. The activities
and aims of your association, which contribute to the health,
the citizenship and the preparedness of America, strengthen
this conviction."

From the evidence heard on-the-air over the past few years, my guess is that they're mainly making it up as they go along! I'm now going to type my signature line the same way an 84-year old Extra-class CW operator from Florida would have sent it:

I dunno. Since I didn't indicate that I thought my honesty *was* being questioned, I couldn't say!

Ed:

Can this algorithm copy the following -- b () n d w () d () h and fill in the "holes" to produce the word "bandwidth?" I can, and I can do the same for virtually every word I know. So can you -- and you probably know a few more words than I do! I think you can copy a lot better than any DSP-filtered code-decoder! Remember -- the purpose of "copying" is to produce a readable message! A person deciphering a printout of the DSP-decoder may not be able to fill in the "holes" as well as someone who copied the message first hand! Remember, there may be a lot more than a 33-percent "hole factor" in a lot of words copied under poor condx!

Ed:

Pick 10 non-hams who aren't on the ARRL staff -- that is, non-hams that
are much less likely to ever have heard Morse code, and go ahead with
your demonstration! Oh, what the heck, just to make it convenient for
you, use non-ham ARRL staffers if you must. But remember, there
must be no "coaching" of any kind. You give them the key, and step
back and watch what they do with it. You can provide the code chart,
and a simple, realistic message of 25 words. Have 'em send it any
way they can. We'll listen to the .wav and be the judge. OK? You've
got the tools and technology to make it happen, its a good idea, please
proceed!

Ed:

These people who've already waited until past middle age for code testing to be eliminated won't be perterbed by waiting another 3-5 years for the S25.5 code testing requirement to be dropped with the inevitable FCC axe given to U.S. code testing. It's a done deal, and couldn't possibly take any longer than that. Why make them suffer for a useless 5 WPM test? Let's get rid of it NOW!!! What if you and the ARRL were right about the technological advancement thing? What would be the point of putting it off, just to force some poor sukkas who aren't going to use CW anyway to pass that horrible, useless, 5 WPM test? The relatively small handful who would have become CW operators anyway aren't going to be put off by the 5 WPM test being eliminated. How's that for "empathy?"

Ed:

I'm with you there, but that still requires one to provide the electrical power
overhead to operate *both* a computer and a radio -- not to mention that it
requires that computer and its complicated, EMP-sensitive circuitry to have
survived whatever catastrophe has created the situation in question.

>>How does eliminating the ability for radio amateurs
>>to exploit one of the most practical, effective, efficient, and universal
>>modes at their disposal meet the "necessity" of emergency
>>communications?
>
>I do not think that we should eliminate such ability. Morse code and OOK CW
>should remain a legal amateur mode, IMHO.

Don't look now, Ed, but we're discussing the requirements for prospective
HF-privileged hams to be tested in Morse/CW operation at useful
proficiency levels. We're NOT discussing the "legality" of that, or any
other, mode. The Morse/CW mode will be "legal" as long as ham radio
exists. That is definitely NOT the issue, and to offer some sort of pointless
"guarantee" of that legality is NOT the solution to the problem of keeping
a large enough pool of trained CW operators within the ARS. I suggest
you save such cheap tactics as the above for someone stupid enough to
fall for them.

>>Or, a better question may be, how can this
>>necessity be taken care of by hams who are technically uninvolved,
>>unskilled in practical communications techniques, and basically
>>limited to what some "Elmer" has shown them about how their

>
>I don't believe that the ham you describe represents more than a tiny
>percentage of hams.

I'd say it represents fully 25-percent of all "active" hams at the present time, which isn't "tiny" in my book! It's quite alarming, actually.

>And of those that do, their ability to provide
>communication in times of emergency will not be magically created if they
>learn Morse code.

Another brilliant example of your firm grasp on the painfully obvious.
Take a few "ARRL Attaboys' usually reserved for someone who
passes the Technician-class license test for yourself! You deserve
them!

>>How would one of them compare
>>to a well equipped, CW-skilled QRP operator who is capable of
>>setting up a low power station capable of indefinate operation in

Uh hunh. Yep. I see. Roight. And batteries have to be.....what's the
word I'm looking for? Ch.....Ch.....something that sounds like that....

>>Now, if I'm limited to a few amp-hours of DC current a day,
>>how am I going to run all that gear?
>
>If you really care about emergency communications, improve the power reserve
>of our batteries.

Actually, I have quite all I need right under the hood of my car. I also
have quite an array of gel cells I keep charged. DOOOOOH! NUTS!!!
I gave it away! I have to CHARGE my batteries! And I do that by
using ELECTRICITY from my wall outlets, which are connected to the
power grid -- you know, the one that's gonna be toast in our ass-u-&-me'd
emergency scenario! OK, here you go...time to roll out those large,
expensive, high-capacity solar panels, or rig a bicycle to an alternator,
or start collecting lumber to build a windmill, right??? Right...

>>Let's say I'm using a common,
>>highly ubiquitous laptop -- it still at least doubles my current load on
>>what may be a very thinly stretched power source. Using CW, the
>>method of encoding/decoding the message requires no more of a
>>power source than whatever my own diet consists of at the time.

>
>But you can gain 10-15 dB by using the digital mode, so you can cut your
>transmit power drain by at least 10...
>

Well, aside from the fact that I've already said that given enough power
to keep it going as long as I needed it, I'd be using those digital modes
anyway! If you missed that, I'd suggest a visit to LensCrafters.

>If the goal of the regulation to maintain Morse code testing is to enhance
>emergency communications, my point is that there are better regulations to
>accomplish that goal.

Yawn. Sure. As long as it doesn't require anyone to make the effort
to learn a useful communications skill, that is. Got it.

Well, up pops the devil. Got no problem with being a publishing house; as you point out, they do a fine job of it.

I do not find the QST statements all that informative. Others may differ in their mileage. They are not in a league with local government for obfuscation but neither are they a fountain of good hot information. Statutory accounting data is not operating information in any business which is why a whole area of Management Accounting exists. The annual postal report tells me more.

One sign happened to appear in my mailbox today in fact. I bought the 2000 Handbook, an altogether admirable publication, something over a year ago precisely to begin to rebuild a library that had begun with the 1954 edition. This nice mailing, at non-profit rates, invited me to buy the 2001 version including as a lure what might have been a photocopy of the TOC of the edition I already own.

In and of itself, it is not a real stinko piece but as a Marketing effort it sucks swampwater thru a long thin straw. First off, it is designed to sell a Handbook to someone who owns a recent one which cannot possibly be super-lucrative. And only a Handbook, not even an invitation to the Antenna books, QRP, or anything else. Nada, nichts, zilch. So I am not impressed with the marketing of pubs nearly so much as I am impressed with the pubs.

What I find most interesting however are first, the merging of conventions with hamfests including Dayton, and, second, the simple fact that since I processed the address change to Omaha from Wausau WI I have received several Hamfest flyers, stuff from AES and Burkhardt, and a bit from two of the local clubs. But in over two years I have yet to receive a blessed thing which in any way invites me to join the ARRL -- like I am in a Nixie File somewhere. (probably deservedly).

Based on not much more than a well-trained gut from a few years of doing direct mail marketing, as well as management accounting, I see an organization that is in preservation mode with respect to membership while doing a less than phenomenal job of pub-pushing. But it is not that it is done poorly but that it is done at all while leaving membership alone. It would seem that membership is where it begins for no better reason than QST advertising; the contribution margin should be higher there one would hope plus a relatively cheap marketing channel for the pubs. So the gut concludes that membership is a problem that has not been addressed successfully.

For the record, I divide the League's political (membership response) from its Technical, Publishing, and Services (VE, Bureaus, etc.) The latter are first rate, the former FUBAR. To some extent, previous atrocities are coming out of the closet in battalion strength, the biggest one allowing (never stated explicitly but allowed to grow) the League to develop expectations among members and non-members of influence in Washington that had no hope of satisfying anyone let alone everyone. But the strengths and benefits of an organization need marketing and if I had any criticism -- and being a non member I am well aware that as such I have no right to an opinion at all -- it would be the lack of a coherent marketing philosophy.

The reality is that members vote with their Directors, non-members vote with their wallets.

Dick N�BK

No, Ed, it is describing one.

Are you suggesting that your wife has never attempted to send CW? I
believe you've again missed the point. Persons who have never began to
learn the code most always instinctively send all dits, and try to space
them out, and it sounds like an old wire telegraph did -   dit

ditditdit ditdit dit, etc

So the teacher has to instruct them to make a dah last three times as long as a dit and so on. Usually they pick it up pretty fast. But if one sat down to send an emergency messagw with a lookup table prior to any code training the odds are long that he wouldn't be able to send anything recognizable as Morse code.

The same problems exist in rural areas and small towns.

> Want to go for the shrimp-cocktail appetizer on a group of 10 6th-grade grads?

Sure, after we define the problems and the term "large number". What
percentage of the kids would have to choke on the test?

> I will go for the dessert on a group of recent Tech licencees.

I think you'd do better with the 6th graders--really.

I believe schools still teach business math courses.

> me hands down.

I believe that most commercially available units feature algorithms
which came from some of the better mathmatical minds. The units have
been available for some decades now. One would think that many, many
improvements and tweaks would have been made to the software by now.
Still, none of the units does a very good job in the presence of the
noise or QRM which we typically encounter on HF.

> For that matter, do you think a DSP-filtered code-decoding algo would beat me

> copying by ear in the usual 500 Hz bandwidth that hams typically use?

Nope.

Now THAT would be a conflict of interests. I know I wouldn't cancel my
life membership over such an issue. I'd rather stick around and be part

of the loyal opposition ;)

I guess it sort of depends upon one's definition of "desireable". Oh
hell, I should never mention the word "definition" in a response to you.

Seems I recall the last time he told it he was 4F because of flat feet!

The Brillo Pad "S - O - S" commercial was a brilliant (no pun intended) one. In that, all the pots and pans are thumping out SOS. Even they have length in there. Since childhood and Scouts I've known that CW was dits (short) and dahs (long). One would have to live in a cave not to have "heard that somewhere."

That, and the high incidence of gender confusion prevalent among female law enforcement personnel would lead me to believe that maybe Allison is not a girl of perfection after all.

(Sigh) Oh, well.. Guess I won't have to divorce my wife and abandon my children now, after all.

Allison was just a cruel dream of perfection that ended up being a uni-brow lesbian police officer with a butch hair cut and a belligerent attitude, about as appealing, intelligent and sexy as a blob of dog waste squishing up between your toes on a hot afternoon.. A mental, social, and sexual cripple with a face like a bucket of worms.

>WE need to keep the hobby clean , promote activities that
>keep the hobby in the publics best eye.

Normally I'd agree wholeheartedly, but WHAT is "the publics best eye" in a nation that not only elected a womanizing liar as president, but RE-elect him and then fail to impeach him when all of the evidence said "GUILTY AS CHARGED"...?!?!

It's hard to determine where the morality of this nation lays, anymore, when it's easier to get a pound of pot than a loaf of bread for people who are hungry.

>maybe 20 wpm is not the answer but any one can do 5 wpm it
>keeps some kind of standard and also as said will
>most always get through when conditions are bad.

The code test itself will not keep any "standard". Our willingness to accept responsibility for our own actions, or willingness to get in someone's face over thiers is. (peer pressure)

And don't try to argue facts with THIS crowd when it comes to the effectiveness of CW. It IS a fact and it DOES get through when MOST other modes won't, but you will hear 1000 excuses as to why it doesn't from people who HAVE to believe it won't in order to substantiate thier "position".

Just one is enough.   CPR is only about 23% effective, but I use it on a weekly basis anyway.

Really! Wow!

I haven't priced pot, but around here bread is about $1.89/loaf in the supermarket, or $0.58 in the "2-day-old Outlet" store.

You're finding a pound of pot at prices lower than that? Maybe you use enough so that you can buy it wholesale.

>The end of your story Good Buddy is the bottom edge of the CB band,
>the rest of us do real ham radio down the spectrum.

Funny thing is that I haven't heard the term "good buddy" for many many years...up until know that is...er, from YOU. BTW, when I was active on CB, I operated pretty much exclusively on sideband. "Good buddy" was a term used by those on AM...but you knew that already because you would never speak out on a subject that you weren't 100% up to date on, right?

73 de Bert
KC2HMN

Or should I say 3's & 8's, or perhaps "all the good numbers to ya," or how about 10-4 "good buddy." Thanks for the chuckle, you just eased a hard day at the office.:-D

Ed:

Nope.  The idea is to see if they can send and receive intelligible
messages using Morse Code, with no previous training or experience.
The 10 question test is irrelevant.  We're testing actual, practical,
operational capability, not theoretical knowledge.

Ed:

Yeah, that's it!  We all should have asked them to simply eliminate
that stupid, politically-correct, and totally lame waiver program, and
just gone back to a reality-based licensing system such as that
which existed before the late JY1 stuck his nose into our domestic
tent.  I don't know about you, but all of the truly "disabled" hams I
know are code-proficient, code-loving, and CW using hams who
fully support the concept of code testing under pre-Restructuring
guidelines.  The waiver system existed mainly to serve lying,
cheating, criminally dishonest people seeking a way around the
code testing requirement any way they could.

I wonder if any of the Politically Correct 4-star officers running our
military today would ever make such a public statement in support
of the NRA?  IMHO, any that wouldn't should be demoted to
second lieutenant and placed in permanent charge of the latrine-
cleaning detail!  What with all the attention being given to the
issues of homosexuals in the military, women in combat units,
and "feel good" black berets for anyone with a pulse, I'm not at
all very confident in the abilities of our current military leaders.

Ed:

OK, fine, I'll admit that your "DSP-filtered algo" can hear weak signals better and decode them better than you can. Great. You win that round. Now, back to reality, to our theoretical emergency situation, and the plain fact that a typical ham, suddenly thrust into the position of having to provide effective emergency communications for a remote enclave of survivors, must make do with what he has to get a message thru. He doesn't have DSP-filtered algos or cryptologic *anything* to work with, and precious little DC current to run the requisite computers on to make it work. He does have a good basic low power or QRP transceiver, a key, a microphone, dipole antennae, and feedlines. Let's say the transceiver is an SGC 2020. Which mode does he use to make MOST effective use of his available power, band conditions, etc? Let's assume the guy in question is you, with your present CW skills. Which do you grab for first? The key or the mike? I've already made up my mind what your answer is going to be, but play along with me anyway. If I guess wrong, I'll tell you, and I'll owe you a second lobster dinner.

According to the comments of one FCC official back in the late 1980s, hams attitudes regarding code testing had quite a lot to do with it.

Big Wrong!!

UPS never even applied for it, because the equipment manufacturer could never make good on its promise to make ACSB transceivers that worked. UPS gave up and went to the Motorola 800 MHz system that they use today.

There have been several systems licensed to others by now, but none on the grand scheme that we were told UPS had in mind.

You spelled that wrong. It's spelled "s-u-p-p-o-r-t".

>We need the concerned, proactive efforts of Mr. Hollingsworth,
>NOT some smart alec with a Napoleonic complex.

There is, as I found out the hard way, a world of difference
between "Rules and Policy" ("legislative") and "Enforcement"
("executive").

Bill's job is the former. Riley's job is the latter. They are not
interchangeable, nor should they be.

>   This guy needs to remember where his paycheck comes from.

It comes from the same place that YOUR paycheck came from when you
were on active duty, Gunny.

Get out of his face and let him do the job that the People of the
United States appointed him to do - amateur radio rules and policy
specialist.

>If we want to ask the FCC to consider something, it's our right.

And it's his RESPONSIBILITY to analyze that request and recommend
agreement, disagreement, or modification, and enactment by the
Five Wise Folks only if appropriate.

>If he feels put-upon by that, then he needs to be passing french fries
>at McDonalds, NOT working for us at the FCC.

I may not always agree with Bill's positions, but he's telling it
as it is, and I'm with that 100%.

Been there, done that.

You're absolutely right, in my opinion. I don't think an isolated MOU signed between the ARRL and REACT is certainly not justification for the ARRL to expand its charter. However, I think the entire concept is worthy of our attention, dialogue and debate on the matter. I don't think anyone is proposing the ARRL should currently become the organization we are debating. I think there are pros and cons we have all been discussing and it's been a very interesting dialogue so far.

Oh, did you happen to look at the website I provided in some post? If I recall correctly, the entire leadership of the local REACT organization is hams. Check it out: http://www.dallasreact.org/brdofc.php3. I am not a member of the REACT organization here, nor do I know any of the BoD or Officers. But, I find it interesting and wonder why all them decided to create an organization "outside" the traditional lines of ham radio, which are ARES and RACES.

Maybe not, but that's only as far as the regular participants of this newsgroup
are concerned.

I know from nothing of an "agenda", Hans. However, don't you agree that as time goes on, our radio spectrum will become that much more at risk? I can't help but think of the storyline " FCC to Amateurs: Detailed Regulation "Not in the Picture" " on the ARRL web right now: http://www.arrl.org/news/stories/2001/05/24/4/?nc=1.

As time goes on, much as we may not want to let go of any of the spectrum, would we rather have it go to commercial interests? Or, would we rather have it go to other people who have a similar interest to ours--radio communications? Heck, I'd hate to give up any of our spectrum, but to think it just always going to be there is unrealistic I think.

I'm not a conspiracist, Hans, so I cannot speak to or for your "agenda" concept. I am simply interested in dialogue.

Good question, Ed. My supposition would be that the ARRL has always identified itself as a ham radio organization. Over the past few to several years, there's been a "change" in the membership of ham radio. That the ARRL in the past has "excluded" the idea of other radio groups under its roof may be affected by that change in membership--maybe?

Tradition, specifically, is a dying art in today's time. Ham radio is steeped in tradition, right? May it stay that way? Probably. But I think traditionalists will find themselves feeling much more defensive that those of the past. That's not said to do any other than make an observation on the culture of ham radio as a hobby. The culture is changing I think.

What's your thoughts?

From the old days before the phone band expansion, on 14.205:

CQ, CQ, CQ. Double U Six, Hotelllll, Lima, Hotel, California calling.
CQ, CQ, CQ, DX. Listening on 14195 and on this frequency.
If you are transceiver equipped, turn your RIT to the far clockwise
position and call Double U Six, Hotelllll, Lima, Hotel.

I thought I remembered him as Blackie.

LRod

I thought I posted this, but it didn't show up on my server. Sorry if
it hit you twice.

I dunno. I do know, however, that I learned by practicing on a straight key (still have that J-37) all by myself. I learned to send BEFORE I learned to receive - it sure helped. When I finally sat for the test, the examiner said I had a good fist.

Just like the oldtimers here - when the newcomers are other than a
bunch of smartass know it all wiseacres. Those we can do without.

The testing of today is not as "dead easy" as it was when I studied a 4-page study guide to get my entry into ham radio and a 16-page study guide to get all Amateur priveleges.

If it is so "dead easy," why don't you take me up on my offer and memorize 1000 Russian definitions in a weekend without understanding? That would shut me up. :-)

>The "attitude" has been with us ever since the FCC turned the 11 meter
>ham band over to the CBers almost a half century ago.

Before I was a ham, I operated some on 11 meters. I don't recall the animosity that some show here. To the contrary, the ham I met recognized my interest in radio and encouraged me to become a ham. Fortunately, although the Novice license was "dumbed down" from what he had to do to become a ham, he didn't feel a need to rub my nose in it. I am still licensed today.

Had I run across hams who insulted my CB activities the way some feel a need to do today and then rubbed my nose in their "superiority" over the "dumb" accomplishment I had just made as a Novice, I would not have continued in ham radio; I was a sensitive 13-year old kid who would have found other distractions and interests.

Those with an interest in electronics and communications have always formed the reservoir from which Amateur Radio operators have come. While I agree with you, I have to note that those with an interest in electronics and communications know that Amateur Radio exists. Maybe the best PR ARRL could do is to convince them that the hateful attitudes of a few toward new hams do not represent the views of most hams.

I believe the budget calls for the hiring of a full-time marketing staff person. As a League member, I was pleased to see it; I have always felt that the marketing of ARRL pubs was missing out on a lot of opportunities.

>Nothing the ARRL does today will effect that happens in the next century.

Do you feel that the actions ARRL took in the last century to persuade the government to allow Amateur Radio to continue after it was shut down during wartime had an effect on what happens to Amateur Radio in this century?

its
>roof may be affected by that change in membership--maybe?

Not by the wishes of THIS member, Kim; I do not feel that ARRL can represent
the interests of ham radio and other radio services simultaneously. Sooner or
later, the League would have to deal with a regulatory matter than affected
both and it would have no way to choose sides.

There is a lot of common ground between Amateur Radio and other services, and
the League should, IMHO, do a better job at exploiting that common ground, but
that should be done through cooperation and liaison.

Actually, no; you have expressed a view that ARRL should do so (you have communicated that to your Director, no?), but you have not alleged that ARRL is secretly trying to do just that.

As I said, if the issue ever comes up on the plate, your Director and my Director will hear two very different viewpoints, I am sure. :-)

In general, I think the League will put in an amount of effort about equal to the payoff for Amateur Radio. My guess is that in the case of liaison with REACT, 2 or 3 staffers might spend a few hours a month.

I recall 3 or 4 posts by Cecil about breakdowns. I don't recall enough of the details to say whether they were separate incidents or not.

I do know that I have been by the side of the road at night more than 3 or 4 times in my years of driving old cars, although I have my cars trained pretty well now -- they usually break down in my driveway, or at least get me home.

You're being generous with yourself. I think I used the term "a large number" or something like that. Wouldn't something like 30% be a large number?

> >I think you'd do better with the 6th graders--really.
>
> I will take a majority there, too.

30%?

What's the advantage of the DSP filtered unit when the op copying aurally is also using a DSP filter unit? What band are we talking about--160m or 6m? If it is 160m, is W8JI just outside the 500hz bandwidth CQing with his big signal? In that case, what happens to the DSP filtered algo's advantage (this DSP filtered algo does its magic outside the AGC loop?)?

In this particular case, I'll settle for the wash. You have, of necessity, certain limits placed on what you say and how you say it. I'm under no such restraints.

Amateur radio isn't helped by a fellow who plays Chicken Little in making statements to others that their particular attitudes are causing amateur radio to die (especially when amateur radio has shown no real death rattle) or statements that indicate some spectrum auctions are going to take place if people speak their minds. Goofy warnings about what could take place if the ARRL does not embrace other radio services don't help amateur radio either.

By the way, Ed; I don't think you are a no-clue :)

You're not being explicit enough about this, Charles. Don't hold back. Tell us what you really think of lesbians with butch hair cuts and belligerent attitudes.

That bit of trivia is old news, calculated misdirection, and obfuscation.
You had no more right to a KH2 call than Deignan has to a KH6 or KH7 call,
and both callsign requests were spoofs of the system. So sue me.

I let my ARRL membership lapse after failing to receive my copy of QST for several months. I was moving around with the DoD at the time (four moves in one year) and the QST subscription just never caught up with me. So, in spite of a change of address sent for each move, I only received two issues that year (the two that came before I started the various moves). At that point, I saw little reason to continue membership when it was time to renew. And I never received anything about renewing my membership either (of course, in my case, the renew invitation was probably sent to one of those older addresses).

Yes, I suppose "asked" would be more accurate. I'm originally from South America, with a fairly lengthy stint in England, and I suppose my english still fails me at times. Sorry about that.

> >the rudeness, who'll
> >"inherit" AR? Someone on QRZ posed this question and it simply went

> exam make them amateurs? What attrition were you speaking of?

The attrition I'm speaking of are those (not all) "old guard" amateurs who exhibit nothing but contempt for those who've come from CB. I personally have a licensed amateur to thank for encouraging me to study to become licensed myself and operate within the FCC rules. He knows that, while in S.A., I operated on what is generally known as the "freeband" here in the USA, but he didn't bash me over the head with Part 95 or 97 and he didn't turn his back on me either. He sat me down, explained that he'd done it too earlier himself and was encouraged by an "elmer" to move on to the next level without consternation or damnation. He didn't even know me from a hole in the ground and he posted (mailed) me his set of Gordo CW cassettes to study. Those are the heirs to amateur radio. The "grumpy old crumudgeons," (hope I spelled that right) they are the segment of amateur radio that shall attrite. Yes, upon passing their exam, an CBer or ex-freebander (emphasis on EX) becomes an amateur. Hopefully they will NOT exhibit the same level of intolerance for those who enter the hobby (or service, as you please) with different rf roots.

Just one other note. It appears as though I will get an HC prefix before a Kx2 prefix as I'm going to Ecuador for three months to care for my grandmother. I figure I'll grab my ticket there while I'm at it. I included this tidbit, lest you think I've no respect for the elderly regarding my comments above. ("grumpy old crumudgeons") I must say that I've noticed here in the USA that many view the elderly as somewhat of a burden. This is certainly NOT meant to be a general statement. I said many, but certainly not all. In S.A., the elderly of the family are revered and the younger set willingly embrace the responsibility of caring for them. Hence, my three month hiatus...relieving a cousin. I hope this clears up any misunderstanding of what I meant.

> etc? Let's assume the guy in question is you, with your present
> CW skills. Which do you grab for first? The key or the mike?

Depends on more factors than you have revealed here, but here
would be my first thoughts.

The first thing I do is attempt to draw attention to my plight.
Supposing for the moment that 20M or 15M is open, I am likely to first
tune up to one of the maritime traffic nets which have multiple
NCS covering various geographic areas, take regular breaks for
weak stations, and are experienced in handling distress situations
under difficult propagation and involving power/antenna limited
stations. Those nets happen to be phone nets, so I grab for a
microphone (duh!).

If communications were good at low power, I'd continue on SSB
to conserve my dwindling batteries (SSB has a lower duty cycle
and consumes less energy on transmit than an equivalent CW transmission).
If communications were poor on phone, I'd switch to CW, keep transmissions
very terse and accept the fact that I probably would run out of battery
power earlier if long transmissions like a description of a medical condition,
or for radiolocation (triangulation) were required.

I respectfully submit to you that IMHO times are changing and the
grumpy flatulence to wit you speak is not an inexhaustable resource. I
don't even view them as "resouce," much more a stain on the noble
purpose of the service. (or hobby, as you please.)

If I read the times correctly, by the time this happens, your boots
won't be "shakin'" at all anymore. (not meant in a bad way, just
factual) This is certainly not an overnight process.

  On the CB in many parts of the country, "good buddy" is derogatory -
used by those who are a little too good of a buddy when it comes to
male friends.  Therefore, calling someone a "good buddy," who is not,
could lead to an argument, at the very least.

When I first heard about the berets, Larry, I was just as opposed as you seem to be. However, after a little reflection, I've now come to the opposite conclusion. What has not been widely reported by the press is that training requirements for all active duty Army personnel has increased dramatically over the last couple of decades. In fact, Basic Training today (now 12 weeks instead of 8) is not that different then the general training (physical fitness, basic weapons skills, etc) given to special forces personnel.

Physical fitness and readiness training (weapons, combat skills, etc), Army wide, is much more intense today than it was just a few years ago. Serious physical fitness (long distance runs, etc) has now become a daily routine, as is some kind of combat skills training. Soldiers spend much more time in the field and that field training is much more intense (involving a wide range of technologies). And the overall work day is longer, leaving the soldiers little time for after duty activities (including spending time with families).

With this in mind, I understand the Army's decision to issue berets to all soldiers. With the number of personnel shrinking, the goal is to get a maximum effort from each soldier. If that beret can help to install a strong military mindset into a young soldier, thereby increasing the effort put out by that young soldier, then I see no reason not to issue it to each member of the Army.

By the way, I'm not defending the Army's decision to increase training. In my opinion, there are situations where the Army has went too far, where soldiers are getting hurt unnecessarily. But that is a topic for another discussion at some other time.

Larry, in REALITY, if the person was smart enough to pack all of that equipment (transceiver, key, microphone, antenna, feedlines, etc), why would he not have packed equipment that would have served him better in the situation you describe? In other words, if he was heading to a remote enclave where he might face an emergency, why would he only pack a low powered transceiver? Likewise, if he did not know he would be stranded on a remote enclave (a boat or plane accident, for examples), why would he have packed any communications equipment at all (which, even if he did, probably went to the bottom with the boat or plane)?

However, let me put this another way. If _I_ was stranded on a remote enclave, I would have the equipment I own or nothing at all. Since I don't own a low powered transceiver, I'm not going to have one to use on that remote enclave. And, since that remote enclave is not likely to have a convenient local Radio Shack store, I'm not going to be able to build one either. So, if I'm not able to use what I have, I'm not going to be able to use anything at all. Therefore, your theoretical emergency situation has no basis in reality.

Larry, didn't you use the exact same phrase a few days ago when talking about those with an interest in electronics - the only electronic experts you know are "code-proficient, code-loving, and CW using hams who fully support the concept of code testing?" Do you limit the people you know to just "code-proficient, code-loving, and CW using hams who fully support the concept of code testing?"

Stop by and visit sometime. When you do, I'll introduce you to a friend of mine. He lost both arms, and a leg, in the Korean war and has been a ham for almost twenty years solely because of the disability waiver. Contrary to the BS above, he is the type of person the waiver existed for.

I think Larry's scenario is not only reasonable, but is in fact commonplace. One of the fastest growing facets of the hobby is QRP, and a significant portion of that growth is among back-country hikers who carry in minimilst stations similar to what Larry described.

> Therefore, your theoretical emergency situation has no basis
> in reality.

The "remote enclave with QRP" is solidly based on reality, and is not some "manufactured theory" to suit Larry's question.

(Doncha just hate it when someone spoils your story?)

And the first thing he will do is sit the boys down and ask them what they
are proud of, what they are good at, and how the world would be poorer if
they got run over by the 8AM streetcar. Even the Mafia needs to answer
those questions periodically.

Then comes how to measure ('metrics' is the buzz du jour) both the success
of the League in whatever their chosen mission might be and the success of
the consultant.

That should not take more than a few years.

Dick N�BK

Snipped from and copy-pasted from today's ARRL online QST QST letter:

----------------------

The FCC says the ball is in the court of the Amateur Service to
determine the course of future Amateur Radio regulation. Speaking
May 20 at the Dayton Hamvention FCC forum, Bill Cross, W3TN, of the
FCC's Wireless Telecommunications Bureau, said that the days of
Commission-imposed regulation are past.

''Detailed regulation of the nitty gritty of communication services,
including the Amateur Service, is not in the picture,'' Cross said.
''Rather, the FCC is shifting to strong and effective enforcement of
truly necessary regulations.'' The FCC, he said, now plans to look to
the amateur community to reach consensus on any new regulations it
thinks it wants and needs.

On Fri, 25 May 2001 18:54:46 GMT, Brian Kelly, w3rv says:

>''Detailed regulation of the nitty gritty of communication services,
>including the Amateur Service, is not in the picture,'' Cross said.
>''Rather, the FCC is shifting to strong and effective enforcement of
>truly necessary regulations.'' The FCC, he said, now plans to look to
>the amateur community to reach consensus on any new regulations it
>thinks it wants and needs.

I firmly believe that the amateur rules ought be simplified to:

97.1 You are required to pass a technical test to show that you
understand how to build simple equipment which meets spectral
purity specifications of .....blah, blah, blah. You will be
issued a callsign when you pass the test. Transmit your call
sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna.

97.3 Here are your bands. Stay inside of them.

97.4 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands and launch communications satelites into space and other technical radio stuff you may think up. The government doesn't care what mode you use for any of this.

97.5 Play nice. We'll try to keep the CBers out of your hair, and deliberate interference or other assinine behaviour on your part will cause Riley to come and kick your ass off the playground. Have fun.

Love always,
/signed/ FCC

sum people thinks they clever but i be clevererer once in a while. just dis mornin after huffin sum weed i had an epifanny and figgered out the reel name of dat wVa guy. he be usin a anagram fur a name and so it can be undun to get bak his reel name.

you can rescramble "roger wiseman" an make it be "rowena grimes"!!!!! ole rowena has been playin wid us all dis time an makin us think she be a he but i dun figgered it out durin my epifanny at brekfast.

rowena now busted.

course you can rescramble "roger wiseman" an make it be "raw nose grime" or "wiener orgasm" or but they dont mean nothin at all. nobudy wud be named raw nose grime an it be unchristian to say wiener orgasm so that leave only rowena grimes.

so let us pray fur rowena grimes.

God said, "div D = rho, div B = 0, curl E = -@B/@t, curl H = J + @D/@t," and then there was light. amen.

The FCC's Bill Cross (W3TN) has mentioned it, and the head of the FCC's office of Engineering and Technology has said the same thing a while back - "implementation of 'new and more modern communications technologies,' such as digital." They have done just about everything except beat us over the head with a baseball bat to get our attention directed where it needs to go. While I am all for remembering our roots, and how Amateur Radio came to be, but we don't need to keep our collective heads buried where the roots are. The Amateur Service can no longer afford to let those of us who keep their heads buried in the past, and through regulatory pleadings sent to the FCC to keep it that way, to impede progress. Many of us are professionals in our respective areas and thus know that old technology falls by the wayside to make room for newer, and better technologies. The Amateur Service is no different.

What we really need to discuss here is how best to use the new emerging communication technologies instead of wasting effort debating "the hot-button issue", that the FCC has all but told us in plain language is a dead issue with them, and to forget about bringing back the so-called good-old-days. I have seen endless debates, here in this news group, where the idea is to keep the service shackled to the past while pretending it is good for the future of the service, but almost no debates about how to plan for the future as the service stands NOW. That's want the FCC wants us to do, and we are ignoring the increasingly pointed references to that fact.

So with the above in mind what would be the best use of the available spectrum be in light of the various communications modes? How should the current band plans be altered in light of the new license classes? These points are the other half of the restructuring done by the FCC in April of last year. The FCC has waited for over a year now for the Amateur Service to address these issues and to "reach a consensus". So far all I have seen here is people ignoring the issues, and the FCC is tapping it's foot while growing increasingly impatient waiting for a reply.

>You're probably right Ed,

Just for you, Hans, let me repeat this again:

All those functions are defined by power series. What your calculator
does is use the four arithmetic operations (addition, subtraction,
multiplication, and division) to arrive at say, a 9-digit approximation.
For example, regarding Cecil's trig function question:

 sin(x) = x - x^3/3! + x^5/5! - x^7/7! + x^9/9! - ...

You carry this sum out (with pencil and paper) using as many terms
as needed to meet your approximation requirements, just as your
calculator does. No trig tables are necessary; in fact, the above
is how the sine table itself was created.

Note that these are transcendental functions so the best we can
expect for most is a decimal approximation.

Yet you'd be hardpressed to provide any of their callsigns. And as we
know, free-banders do not bar themselves from using the ham bands.

If they were licensed, it just goes to show that even the riff-raff
can get licenses.

>
Neat one: Here's another:
```

- In states where radar detectors are illegal, set up a radar gun in a place where the traffic really rolls. Set it up so that it cannot be seen from the road being surveyed, then see whose brakelights go on for no apparent reason. the license plate numbers are radioed ahead and the cars stopped for having a detector.

Hans, that makes too much sense. Are you sure it was intended for this newsgroup?

Hello group,

I am thinking about getting my ham ticket. I have couple of questions about the application form.

1) Can a P.O. Box number be used as your address?

2) Are you absolutely required to give submit your social security number?

On the form I've seen, it seems you can substitute a "FCC Licencee" ID #
What is that?
I have a General RadioTelephone license number. Would that suffice?

I do not reveal my SSN to just anyone who happens to ask, even the FCC.

One of my ham friends has a little hand-held transmitter that emits RF
in one of the radar bands. To amuse himself, he keys that transmitter
when he's tooling down the interstate with his camper and a speeder
passes him. He's seen drivers go into fish-tails while slowing down.

>1) Can a P.O. Box number be used as your address?

  Yes, as long as mail can be delivered there by the US Postal
  Service. You are required to keep a current mailing address on
  file with the FCC and are held responsible for complying with all
  official mail sent to that address as if it was served on you
  personally.

>2) Are you absolutely required to give submit your social security number?

  Yup. (See below for why.)

> On the form I've seen, it seems you can substitute a "FCC Licencee" ID #
>What is that?

  That's a number that the FCC issues to you once you register on the
  FCC Universal Licensing System and give them your SSN/TIN for the
  record. Then you don't have to pound in your SSN/TIN each time.

>I have a General RadioTelephone license number. Would that suffice?

  Not at all.

>I do not reveal my SSN to just anyone who happens to ask, even the FCC.

  Federal law says that if you don't, the FCC does not have to
  grant you the license even if you meet all other qualifications.

  All Federal agencies and some state agencies are required to check
  your SSN against a "deadbeat" file of folks who are in arrears on
  court-ordered child support payments and on debts owed to the Feds
  before issuing a license or other benefit to you.

  Play it straight......do you REALLY want to be on their "this guy is
  a yoyo" list?

Gee. I wonder why we don't get an attributed quote? And why does a
minor FCC functionary who probably knows even less about radiotelegraphy
than the current crop, have the corner on facts?

So where did I say that people can't teach themselves? What I said was that the first time most people try to key Morse code they try to make it all dits. Those who are in the process of learning the code soon learn how to form dits and dahs. They woldn't have that luxury if thrown in a situation where they needed to send emergency message traffic NOW.

Oh, yeah, all the freebanding cats are going to immediately change
their stripes right away when they get that freebie ham ticket. Right.
never again will they even remotely consider violating a FCC rule.
Right.

And the virtually total amateur non-use of the band had nothing to do
with it. Right.

Lost due to under-use -- that's no secret.

>This is also why potential new hams are turned off to
>amateur radio, let their licenses expire, or are licensed but are
inactive and will probably not renew.

We would have lost them anyway; this is not an every-man's hobby.
A prospective ham should have a genuine interest in radio
communications and electronics to maintain their interest in
amateur radio, or else he'll be gone in no time. AFAIC, it's
not loss if he leaves. We shouldn't have to beg someone to stay
if he has no real interest in abiding by S97.1 (a section that the
FCC says all amateurs individually should be abiding by). =:o

You need to get an HF receiver so you can hear the long-winded QSOs that
take place!

Usually, the only time short exchanges are done is during contests
or pile-ups; neither are appropriate times for lengthy QSOs. Don't
you know this? It's part of our heritage/culture/custom. There are
long-standing reasons for every (lawful) procedure you hear used on
the bands.

Ed, I'm convinced that you are an absolute wimp. The "new" nasties can
say anything they wish in derogation of older hams who actually just did
what was required to meed the rules, and you remain totally silent until
someone protests at which time you get off on us as "hateful attitudes
toward newer hams".

For your information, there are many, many newer hams out there who just meet the requirements in silence -requiremnts which HAVE been seriously degraded, and have no part of all this derisive bullshit. And no one has any issue with them. I have said many times no new licensee is at fault because the requirements are nearly nonexistant. The big problems is all the longtime lazies who sat and chewed on their bile because they 'just didn't want to".

Fascinating. Were they using callsigns?

>"Ham bands?!" Yes, Dick...not all the leopards are the
>young, irreverent, punks you seem to catogorize them as. So next time
>you visit your local ARC, be careful...you may be shaking hands with a
>leopard, albeit a quiet one.

There's a couple of things about this story that I don't understand.

If the folks you heard were actually licensed hams, why were they on 27.685? Why not use 10 meters?

If they didn't use callsigns, how do you know they were licensed hams? They could be freebanders who masquerade as hams when in the ham bands.

If they DID use callsigns, are you sure they weren't actually on 28.595?

> I myself know quite a few licensed hams
>who got their start on CB

So do I. No big deal. Some folks raise such a fuss over old events - like whether somebody did or did not inhale...

>or, dare I say...well, you know where.;-)

I don't know "where" you are referring to.

It is very clear that we won't have toworry about Dwight trying to send
CW when he doesn't know how. But we already knew that. He prefers to
give it up and let nature take its course, without trying.

Thanks for the update, Dwight. The last time I operated on AM was...much longer
ago than I'd care to admit. (My in-laws periodically try to submit a hair
sample from my comb for carbon-14 testing...to no avail:-))

Actually, the last time I was on AM (per say) was practicing CW with my 14 year
old niece on 11 meters. We adapted the MFJ code practice oscillator for this
purpose. Pretty pleasant, I must say. Thanks again and have a great memorial
day w/e.

Hello Jeffrey,

>Yet you'd be hardpressed to provide any of their callsigns. And as we
>know, free-banders do not bar themselves from using the ham bands.
>

Agreed...but this obviously works both ways as well.

>If they were licensed, it just goes to show that even the riff-raff
>can get licenses.

I'd hardly label them riff-raff, they were certainly NOBODY'S lids. Is is conceivable that they were merely some licensed OT's that found a place to "let their hair (funny) down." The lack of FCC enforcement on 11 meters over the years provided them with little discouragement. Take it easy and have a nice memorial day.

Hello Jim,

I live in Long Island, NY. When I heard these "QSO's," I resided in Nassau county...approximately thirty miles west of my present QTH.

>Fascinating. Were they using callsigns?
>

Yeah, it was pretty fascinating. They did NOT use callsigns. Instead, they just used first names. I remember Emil, Trudy, and Victor. (from Queens) In all, there were about six or seven at any given time. I remember Emil's home town, but I think that's a bit much to post on a NG. Plus, I fear some may even be SK's.

>If the folks you heard were actually licensed hams, why were they on 27.685?
>Why not use 10 meters?

Good question, I think I inadvertantly answered this in my reply to Jeffrey. Is it conceivable that these were (possibly still are) just some licensed OT's that found a place to QSY to let their hair (funny) down for a bit?

>If they didn't use callsigns, how do you know they were licensed hams? They
>could be freebanders who masquerade as hams when in the ham bands.

That's always a possibility but I honestly did not get that impression. These were certainly NOBODY'S lids and just kept the "round table" to themselves. Freebanders" are generally DX hunters and they did make occassional references to their amateur related activities.

>If they DID use callsigns, are you sure they weren't actually on 28.595?

No definitly not, my first rig didn't even make it up to 28.5850MHz. (just 27.3150MHz) Back then, 99% of the freebanders knew the deal, NEVER stray into 10 meters. Sadly, this seems to no longer be the case.

 >I don't know "where" you are referring to.

I was referring to the portion of the 11 meter band from 27.4051MHz through 27.9999MHz. (although many wouldn't go past 27.8500MHz for fear of interferring with the 10 meter Novice sub-band) Hope this info helped. I'm not trying to be a smart-alec, this stuff surely occurred. Take it easy and have a nice memorial day.

Yep, I've seen that one. An alternative is to simply leave a radar transmitter hidden at some location all the time, just to slow down cars with radar detectors. It doesn't fool the locals, who quickly catch on, but it does slow down over drivers.

>administer:
>2x=21 solve for X.

How about something with some meat in it: y^4/3 + 8y^2/9 + 7/9 = 0.* Sure, it's a 4th degree polynomial with fractional coefficients, but clearing the fractions, doing a simple substitution of y^2 = x, using the quadratic formula, doing the back-substitution x = y^2, and finally taking the +/- square roots, would show that a student retained an elementary mastery of algebra. The real test of a student's algebraic ability would be to present some word-problems in which he would have to construct the equations himself, then solve them. A calculator is of no help in this case.

>I bet most pass.

Then answer me this: Why do most (if not all) community colleges have to offer remedial mathematics, beginning with arithmetic (which should have been mastered in elementary school)? And why do these multi-sectioned classes (offered every hour of the day) have long waiting lists of student trying to get in?

The public schools are doing an awful job of educating our youth; the freshman curriculums of our junior/community colleges prove this.

No, I have not--although one particular individual apparently doesn't
recognize that ;)

I think this topic is a great discussion--but way too early for something
like a serious request to the ARRL leadership! Goodness, there'd be
contentious debate and likely probable hobby wounds if this were to come to
the forefront of philosophy inside the ARRL. I think something like it will
happen someday--something even like a couple of the other alternatives that
have been mentioned in this thread. But now? No, I don't think so.

It is hopeful that as topics such as this are discussed, there is a little
less inclination for exclusionary thoughts such as some tend to
express--more because of deep rooted sentiment than because of anything
truly logical. I was not affected by the CB bands being taken away from ham
radio, so it's hard for me to feel bitter about it. Seeing the history of

that, and the bitterness left with some individuals becomes my compulsion to
try to look at things from all kinds of different angles.

> What is that?

Yes. Those who have gotten an "FCC Licensee ID #" had to give their SSN to get one. There's NO WAY around it. - Debt Reduction Act of 1996.

> I have a General RadioTelephone license number. Would that suffice?

No.

> I do not reveal my SSN to just anyone who happens to ask, even the FCC.

Then you will not have any new or renewed FCC licenses. You're lucky that your GROL doesn't expire....

I found out about it after saying "good buddy" to a local CB'er. When he calmed down, he explained the new meaning. I've since asked another CB'er and he had the same explanation. I guess this is another one of those new meanings for an old phrase, like the word "gay."

Hi Dick,

>Oh, yeah, all the freebanding cats are going to immediately change
>their stripes right away when they get that freebie ham ticket. Right.
>never again will they even remotely consider violating a FCC rule.
>Right.

Never said they'd all change, but I'm SURE some would. If you alienate them ALL from the "get-go," then you'll NEVER get the opportunity to Elmer those who are a nudge or two away from "flying straight and level." It's a case by case thing, can't dump em' all into the same barrel. Take it easy and have a nice memorial day w/e.

Why restrict your question to just ham radio? In the maritime service,
an untold number of tens of thousands have been saved because of Morse.
Ninety years of iceberg reports and severe WX warnings issued from shore
stations, SOS calls from burning or sinking passenger liners, Navy and
civilian ships struck by mines during WWI and WWII -- the list could
cover a hundred different scenarios and still not be complete.

I remember getting back involved with CB radio just a couple of years before getting my ham license. The last time I'd been on BC radio was pretty much as a teen-ager, with my uncle's CB radio.

When we (hubby and I) took a trip back up to NY I got a little Midland 40 channel CB--had _no idea_ that there was such a thing as SSB. When we returned I decided to keep the radio in the car and listen for a while to see if there was any local activity. After several nights of listening to "buzzing" on Channel 32 and trying to tell whomever it was that their radio was broke--I was delighted to hear Shelly come on one night and tell me all about sideband. I immediately went out and bought a Radio Shack CB, capable of SSB. Had a blast, and was introduced to the "funny" channels. There's CB radio club--the Rebel Club--that we became members of and had great fun with everyone.

In the second year I learned of ham radio, learned of a class, and hubby and I went off together and got our ham ticket. The Cobra 2000, with its funny channels and all, was sold, and we never again got on the "funny" channels--in fact didn't even really tell anyone there of our intentions.

Just as Bert mentions below--imagine my amazement when I would be talking to people on the ham bands that I _sure_ did think I recognized their voice. It was several months before I really put 2 and 2 together. Many of the very people, nice people who had an extreme prejudice against echo mics, etc., (should have clued me in), who I had talked to on the "funny" channels on CB were now voices out there on ham radio.

With that, it's been real again...and at least more pleasant exchanges and dialogue than before! Maybe I can get in again...but I am out again.

Y'all have fun

Kim W5TIT

Contrary to the BS above, he wasn't born with a Constitutional right
to an amateur radio license! If I could retroactively cancel every
license issued with a "disability waiver," I'd gladly pull his out from
his clenched teeth! Then, like thousands of disabled hams that
came before him, he'd go ahead and earn it back by meeting the
existing code testing requirements! You see, unlike yourself, I'm
not inclined to sell him short!

That is a pretty structured test. And not real relevant to actually trying to send commmunications. Its just a test of alternating long and short pulses. I suspect that when actually trying to send something that requires thinking, the problem will arise.

I know it's a problem I had when I started, and am still having to watch out for.

On 23 May 2001 22:26:18 GMT, W1RFI says:

>Of all the lives saved by ham radio, what percentage have been saved by Morse
>code communication?

Hams don't generally select their favorite mode based on it's potential to save lives. If they did, EME, Hellschrieber, and LOWFERS would have no followers at all.

It could be that people who are not yet accustomed to listening to monotonic, temporally modulated, encoded audio text may not real good at decoding it until they become more accustomed to listening to it. Just a wild guess.

Try asking somebody to whistle the first two notes of a melody they just heard for the first time. Then when they can't, tell them how you think they must have some kind of a disorder.

>Really! Wow!

Once again you live up to my expectations, Hans. Too bad.

>You're finding a pound of pot at prices lower than that?

What I find is that some people find it "easier" to get pot than bread...in other words, they would RATHER spend thier money on pot than bread...do we understand now?

The point made by the other poster was about having to live up to the general public's expectations. My comment was to (sarastically) determine what that view really is.

But I rather assume that you knew that.

If you hear W6HLH, George "the Bigot" Lunge, CQing on his self appointed Band of 10 meters, do not give him the time of day. This poor excuse for a human is a bigot of the worse kind and doesn't even think twice about spouting racial slurs over the airways. It is a shame that his rhetoric is protected by free speech as it does nothing but disservice the Amateur Radio Community and decent people everywhere.

Yes, this guy is bad news as a ham radio ambassador. In 1960, when I was just an SWL, I heard him lambasting me on 20M because the SWL QSL card I sent him (I was 12 years old) wasn't very close to his frequency. My old Zenith console 1940 radio didn't have any kind of a bandspread whatsoever. Ridicule was his stock in trade back then. In recent years, I've heard him come up on 20M calling CQ on top of an existing qso, and then lambast them when they inform him the frequency is in use. I just hope Riley hears him on the air someday, and kicks his knickers off. He is not the kind of ham we need on the air representing amateur radio in the 21st century.

I haven't heard this particular operator (W6HLH), but I must disagree with the sentiment that "It is a shame that his rhetoric is protected by free speech...", as I happen to believe that there is nothing more important than this freedom. Thank God (and the wisdom of Founding Fathers) that we allow this type of talk.

"I may disagree with your words, but I will fight to the death for your right to speak them." ...or something close to that.

It provides the rest of us with the oportunity to hear those against whom we must be vigilant.

...and I seem to recall that Hitler abolished free speech pretty early in his time in power.

Just a thought, and...

Just my two cents.

Only to see if he actually purchased it assembled as he claimed. He remembered the monthly payments, so I was going to ask him its total cost. From that I could have determined if he'd actually purchased the built or kit version (I have the same Globe Scout ad as you posted).

>On the other hand, in contrast to this "honesty check" he'd perform on
>you, he
>has a history of spoofing the FCC to obtain a Guam (KH2PZ) call sign for
>himself,

Nonsense, and you're committing libel and defamation of character by writing that. My KH2 call was obtained during a short stay at UOG. It was a nice opportunity to dump the NH6IL call. You might be interested to learn that both Guam and Hawaii are in call area 13, and Hawaii now also has the KH7 block, too. (Call area 13 consists of all calls from KH0 through KH9.)

>and cooperating to obtain several KH6 calls for a fellow in Rhode
>Island, places where they respectively did not reside.
>Odd!

More libel. He WAS here for a short stay and used my PO Box to retrieve forwarded mail. But he got a little carried away in obtaining some club calls for himself. At *my* request to the FCC (yes, *MY* request to Mr. Hollingsworth), they were cancelled.

You apparently aren't aware that calls are now based on a mailing address, not residency, and out-of-area calls no longer have to be surrendered. For example, one poster on here resides in TX but has the call W6RCA. =:o

My goodness, Hans -- committing libel twice within a single post; shame on you.

All that those "enthusiasts" will have to do is to pass the exam and they will then inherit the bands. Oh but wait -- wouldn't passing the exam make them amateurs? What attrition were you speaking of?

It has had the opportunity to do so for decades, but has chosen to stay the course of remaining and organization devoted to Amateur Radio.

Of course, that won't stop some from talking about the Secret Agenda to Turn ARRL Into a CB Organization. :-)

In the first place, I don't see that ARRL's revenue has been declining over a period of years. Second, those that set ARRL's policy do not, by its very policy, get to personally benefit in any way from the revenues, so they have every incentive to stick to the charter and ensure that any source of revenue does not significantly undermine the fundamental purpose of ARRL and Amateur Radio. Third, the League has had every opportunity to make the changes you suggest, but has not chosen to do so. Why do you think that is?

>He is more than likely correct, Dick. Too many signs indicate that
>publishing more than membership is supporting the ARRL.

ARRL membership is still the most significant source of ARRL revenues, both from dues dollars and from the advertsing revenues that brings in. The publications are probably about equally split between being a value to ARRL membership and Amateur Radio and being a source of revenue for ARRL. If the revenue source were the primary consideration, ARRL books would be a lot more expensive.

Sounds to me like a certain civil servant needs a dose of humility injected ASAP.   We need the concerned, proactive efforts of Mr. Hollingsworth, NOT some smart alec with a Napoleonic complex.

This guy needs to remember where his paycheck comes from. If we want to ask the FCC to consider something, it's our right. If he feels put-upon by that, then he needs to be passing french fries at McDonalds, NOT working for us at the FCC.

W6HLH is "Blackie" in San Leandro, CA, and his usual haunt is 14.178...whether anyone else is there or not! I used to have run-ins with him regularly when I lived across the bay in San Bruno many years ago. I still hear him on backscatter...along with a chorus of people complaining about his rude operating habits.

He's got to be in his 80's or 90's, so maybe soon he'll be QRV from the nursing home and off 20 meters someday soon!

> and Burkhardt, and a bit from two of the local clubs. But in over two years
I have
> yet to receive a blessed thing which in any way invites me to join the ARRL
--
> like I am in a Nixie File somewhere. (probably deservedly).

I can think of two reasons for this. Some people have, at one point or another, asked ARRL to never solicit them for membership again. Second, those who do not respond to repeated invitations to join have the amount of time between solicitations increased signficantly. As a dues-paying ARRL member, I appreciate the efficiency.

> But it is not that it is done poorly but that it is done at all while leaving
membership
> alone.

You bought a 2000 Handbook and have chosen not to respond to the solicitations
for membership you have received and yet you are suprised that you received a
solicititation to buy a new book but not one for membership? Why would that
surprise you?

>For the record, I divide the League's political (membership response) from
>its Technical, Publishing, and Services (VE, Bureaus, etc.) The latter are
>first rate, the former FUBAR.

Yes, but when you use the latter, do keep in mind that it was paid for by
someone else...

>The reality is that members vote with their Directors, non-members vote with
>their wallets.

Actually, Dick, it is the members who vote with their wallets. The non-members
do not vote at all. It is the former that pays for the work I do at ARRL HQ.

Why would you say that, Steve. I agree with Cross completely; if the FCC were forced to decide everything about the way we operate and use our bands, it would not meet our needs. If I, or you, or anyone individual here were to decide what is best for Amateur Radio, it would not meet our needs.

His attitude appears to be one of humility to me.

>   This guy needs to remember where his paycheck comes from. If we want to

>You and all other respondents missed the point - the whitewash.

Actually Dick, the point here is that you're the only one who sees any "whitewash." I'm just a little unsure if that's by choice or involuntary. The leopards you speak of aren't predators to be dreaded...they're a challenge to be tamed. (read Elmered) If you're not up to the challenge, please step aside and make room for someone who is. (and take your snide remarks with you...they're more a part of the problem than the solution)

>your demonstration! Oh, what the heck, just to make it convenient for
>you, use non-ham ARRL staffers if you must.

How about we take 10 hams who have not passed a code test. That would probably be about on a par for what we are really talking about here -- whether hams need to pass a code test to be able to send Morse code? Fair enough?

> But remember, there must be no coaching" of any kind.

If we are discussing this in the context of eliminating the code tests, let's give them a question pool of 10 questions about Morse encoding (dit/dah elements, etc.) Sound fair enough for the context of the relevance of this to code testing?

I just asked her. Suli said that she only tried to send it as a kid and all she knew was SOS.

>So the teacher has to instruct them to make a dah last three times as
>long as a dit and so on.

My cousin got one of those neat code buzzers when he was a kid and we played with it for a while. You were not there to teach us how to send, Dick, but we were able to copy each other using the lookup chart on the key.

> the odds are long that he wouldn't be able to send
>anything recognizable as Morse code.

We recognized each others' code.

Let's ask everyone here; how many of you had to have someone teach you that you should not send all dits when you send dits and dahs?

I agree; it is a self-fulfilling prophecy.  Those who want to see Morse code
become unused and obsolete are using it.  Those that want to see Morse code
continue are trying to undo the damage by showing that it can be effective and
a lot of fun.

The thread has been talking about using a computer for an operator to decode CW, so if the computer put the above on a screen, the operator could dechiper it just as well as everyone reading this post.

And yes, if desired, the computer could probably determine that, in most cases, there is only one logical word that could be embedded in a word containing errors. Do you think that modern cryptography-decoding software algos can beat most, if not all, humans?

I will take a majority there, too.

>> For that matter, do you think a DSP-filtered code-decoding algo would
>> beat me copying by ear in the usual 500 Hz bandwidth that hams typically
use?

>Nope.

I disagree. That DSP will gain 10 dB over the 500 Hz bandwidth, so it will be able to decode signals my ear can just barely hear. I have a reasonable mental filter, but it has limits.

>

Yup. I pulled out my QSTs from that era, and there were several kit and built rigs suitable for Novices in 1951-54.

But fast forward ten years, and the rigs were more numerous and less expensive. Plus there was a growing pile of used rigs suitable for Novices.

My vote for best value of the late '50s era: Heath DX-20. Cost $35.95 as a kit that went together in an evening or two. Bandswitching 80 thru 10, 50 watts input to a 6DQ6 (available cheap if you burned one up), would match almost any antenna. TVI suppressed, simple, easy to build (the chassis and cabinet were way bigger than they needed to be, but this made it easy for beginners to build). When the owner upgraded, an external VFO could be easily added. For voice, add an external plate modulator.

Nearest competition was the Viking Adventurer, which cost $54.95 but ran no more power, modes or bands.

Agreed - it's easy to do it wrong. The question is, how to do it right?

For example:

- do nonhams get to vote for directors?
- do nonhams get to serve as league officers who make policy?
- do league publications focus on nonamateur radio to the exclusion of amateur radio?
- does the league tolerate widespread rules violations in nonamateur services?

The devil is in the details. If the answers to the above are all "no", then why
should nonhams or wouldbe hams join?

>service would have its focus exactly as it has and should.

Whoa - I thought it would "all be under one roof". How exactly is a conflict
like the above supposed to be resolved?

> Both would make
>their arguments to the FCC or Congress, and the decision would be made.

????

Then the other services would not be represented by the league at all, but
would have to make their own presentation.

>In
>the meantime, what would hopefully be understood and what would be happening
>between the radio services' leadership would be that we can all exist, we
>can all defend our positions and we can all respect each other.

This presumes that the other services HAVE leadership to begin with.

Respect has to be earned.

>Some of the
>desires of other services may not be so far fetched.

True.

> For instance, and I
>hazard to mention this because it will split this discussion off onto
>another entire path, what about 1.25cm? Is it *really* all that used/needed
>by amateur radio? Couldn't some sacrifice of band be made for MURS, or for
>FRS, or whatever?

That depends entirely on the spectrum to be lost, and what would be gained in exchange. For example, it might be worthwhile to trade 222-223 for, say, 148-149, which I think belongs to the land mobile service.

Why do MURS, FRS or other services need more spectrum for noncommercial use? If someone wants to work VHF/UHF for "hobby", public service, experimental, educational or other noncommercial purposes, all they need is a Technician license. 35 question written test from a published pool. Piece of cake. Grade schoolers have done it.

>> While we (ARRL) ought to certainly cooperate with other organizations

Not really.

>Radio groups most fervent interest is in maintaining radio
>spectrum, having representation to the FCC and to Congress, etc. There's
>too much interest and common ground to ignore it forever.

Then let those with the interest become hams. That's what the ARS is for.

True up to a point. The question is, does a "double" constitute twice the
hazard of two "singles"? The answer is "it depends".

The best answer is to use alternative transportation when possible. Like
intermodal rail for long hauls, with local delivery of the trailer or container
made by truck.
>
>> That's not true in all cases - it depends

Yup - and there are situations where that makes the difference. In other situations, the greater manueverability of small cars tips it the other way. The real problem is drivers and analysts who oversimplify a complex situation.
>
>> But size isn't the only difference in those

Are there a lot of models by those companies that we don't see here? I know VW makes the Polo but does not import it here (yet). I don;t know about the other companies.
>
>> No, that does NOT follow. You need to include

All depends on the situation. An SUV following another SUV has his view blocked as much as a small car folling an SUV.
>
>> The time saved in a 100 mile trip by increasing

True - but at what price? More fuel burned, more exposure to risk, more wear on road and vehicle, and more pollution.
>

>
> Please read my comments to Larry about other factors that have to be
>considered when setting speed limits, and enforcing speed limits.

Points well taken. The way I see it is this: the speed limits should be set by highway engineers, not politicians. If a road is designed for 75 mph and maintained for 75 mph, then it should be posted for 75 and that speed enforced. Same for 65, 55, 45. There are parts of I-95 near here that are so curvy and rough that 55 is too fast.

Of course the whole speed issue is a farce in some ways, connected more to image and marketing than reality. For example, my Honda Odyssey minivan (nothing mini about that thing, really) has a 205 hp V6 and a four speed lockup auto transmission - pretty decent for what it is. But the speedometer goes up to 140 mph. HUH???

Sorry - it was just getting good!

> However, since I'm a dedicated
>speeder (I learned to drive on German Autobahns), and greatly enjoy
>traveling, I do enjoy discussions about speed limits and traffic
>situations in general.

Questions about the Autobahns when you have time):

- do they allow trucks, or just cars?
- is there really no speed limit?
- how well are they maintained?
- how good are German drivers compared to Americans?

If he wants humility, he should come ON to the W6NUT repeater in Los Angeles,
not merely listen it. However, considering his FCC position, he'd have to give
a "window of immunity" (i.e. promise not to prosecute or civilly fine anyone)
while he's there. They will promptly humiliate him.....

That's fine and commendable. The few hams who get involved in
emergency comms can and do join REACT teams and intergrate ham comms
into the mix on to their heart's content. Whatever works is fine.
That's not the point. The point is that this lonsome example does not
provide any even remote justification for the ARRL to expand it's
charter and move into the other hobby radio services on some grand
scale and cover the rest of the other services' much broader
activities like it does for ham radio.

How could more organizations vying for the dues of a finite number of
"customers" be anything BUT competition between groups?? This has been
tried before within ham radio when organizations were established to
compete with the ARRL, they all failed.
>
If you're talking about the compulsive CB bashing by some hams and

vice-versa as "competition", no, tossing 'em in the same barrel would
intensify the problem.
>

That being the case what point woukd there to having the ARRL involved
in the first place?? Who would gain what? I sure wouldn't gain
anything from an ARRL lab review of some GMRS HT and the the GMRSer
would care less about QSTarticles on satelite comms and HF contest
scores. Doesn't make any sense, there's no synergy let alone
"compelling synergy" among the hobby radio services beyond the fact
that it's "radio". The ARRL would get pounded by it's membership if
Hq. tried to move into anything beyond ham radio.
>
>I am right there with you on spending the money I

It can't happen without the ARRL investing assets into organizing and
publishing efforts.
>
If the users of the other radio hobby services have enough interest in
having national organizations then they can do their own just like
hams have. There's probably ten times more CBers out there than there
are hams, that's more than enough participants to be able to take care
of their own interests if they cared enough to do so whether it's
REACT or whatever.
>
>By the way, I don't know of the operations of REACT in other areas; but here

I wouldn't have a clue, I'm not involved in any of it and my skimpy
encounters with REACT types in the past were not "positive
experiences" to say the least. It ain't like I never been here, REACT
is right. I abandoned garbage CB radio and moved a neighborhood
security patrol organization to a vhf business freq 25 years ago.

Ed, I haven't received anything on membership since I got my Advanced after a lapse about 1966. It came with a copy of something called 'How to cure your Novice lisp' or something like that complete with the A on the mailing label. Too old to be of interest and several regimes ago. I have on a number of occasions of late considered rejoining for no better reason than there does not seem to be a regime in the Huntoon tradition.

The surprise is that I heard nothing about any other publication. Would seem in the normal course of what is now called 'relationship marketing' the Antenna book would be a more normal sale than the next and probably little-changed Handbook and a lot more likely.

The process is fairly simple. Marketing gets the word on strengths and benefits to the most likely suspects, selling brings in the order. Whether one is non-profit or not the first step is the same -- what in hell ARE our strengths, what do we have to sell, why would any sane human being help support us? There are any number of things the League does well including your shop but making the connection between the activities of one Ed Hare and my wallet is a marketing issue. In one short sentence, the League does a lousy job of blowing its own horn.

At the same time, for at least 50 years there has been some sailing close to the wind with respect to the League as a lobbying organization which it cannot be and retain a non-profit postal permit among other things. The impression if not the claim of great power in Washington has led to a situation over the code issue in which no one is entirely sure what the position is, how it was arrived at, or what it means. Some OTs are pissed and half the non Amateur world believes the League sets licensing policy if not actually issues them and is controlled by the OTs. This much misinformation is bound to be corrosive.

I am not particularly down on the League except that its decision-making process does not seem to have recovered from the dictatorship days. In that, it has a lot in common with the average banana republic or AT&T for that matter. Any non-profit membership organization has to operate in both the public service and commercial sectors at the same time which makes its decision tasks more difficult than a for-profit corporation turning rasbuckniks for the shareholders. That it is an interesting bit of balancing makes things more understandable when things don't work but in the final analysis, it is still broken.

Probably none unless there's still some Strom Thurmond type 1x2 still
teetering around the bands. I was issued a 1x3 in the 50s and at that
point there were only two original 1x2s in the neighborhood who I
knew, w3kt and k3jh. I picked up my 1x2 during one of the early 70s
freebie vanity callsign programs and have recently learned that I'm

the third known holder of w3rv since the early 1930s. There are
indications that there might have been an even earlier w3rv.

Flat out horseshit. UPS sucessfully made the point that their access
to 220-220 would better serve the public interest than would the few
hams who used that chunk of spectrum space. And they were right and so
was the FCC. What the hell could code tests possibly have to do with
spectrum allocation changes on any even remotely logical basis?

Hansl:

Hmmm.

Its entirely possible I've missed something somewhere. Since when does a 10 w. SSB signal get thru better, stronger, and with more "punch" and "presence" than a 10 w. CW signal? I'll admit that you can talk faster and get more information across in a shorter time using phone and digital modes -- so, when power consumption isn't a consideration, I'd probaby go that route myself. After all, I already know how to talk! However, when I *was* a SSB operator, I recall many dozens if situations when I lost my ability to communicate effectively in SSB, and was able to continue and complete the QSO merely by switching to CW.
Many times I've checked into the 3905 Century Club Net (a phone net) and worked much-needed new states using CW.
This was when my low-power, indoor-antenna station wasn't getting thru on voice! So, Hans, I'll have to remain skeptical here.

You're right about one thing, however -- the choice of mode does depend on operating conditions extant at the time of need.
Unfortunately, the mode chosen can't be CW if the operator does not know how to effectively employ this mode -- and that's what this debate is all about!

Well, duh, but I thought the Army was *supposed* to be rigorously
trained in combat skills. Just because were now doing what we
should have been doing all along, I don't see any need to issue a
different kind of hat. I know for an absolute fact that an Air Force
Blue beret wouldn't have made me a better Airman -- it would have
just made me the same Airman I always was -- now wearing a
funny looking, highly impractical piece of headgear. Berets make
those even funnier-looking Special Forces "bush" hats seem quite
reasonable by comparison!

>topic for another discussion at some other time.

No, let's discuss it now. During my entire Air Force career, I was
constantly concerned by the fact that we, as Airmen, wern't being
trained on ANY practical field skills, whatsoever. The average airman
went from his air-conditioned dorm to his air-conditioned car to his
air-conditioned work center to the air conditioned dining hall to the
air conditioned club to the air conditioned everything else and back
to his nice soft comfortable bed, 7 days a week, 365 days a year.
Only a select few (like myself) got the opportunity to serve in units
like Combat Mobility Branches, where we had to deal with field
conditions on at least an occasional basis. The average Airman
during my career didn't know how to pitch a tent, operate a
fuel-oil heater, prepare meals in the field, employ proper field
hygiene, or anything of the sort. Heck, many of them went thru

mobility processing lines with B-4 bags stuffed with newspapers and magazines, to give them the proper weight and bulk. If the Army is now going "back to basics," then I, as a taxpayer who is depending on them to keep me free, say "It's about damn time!"

I think there should be only one "boot camp" for ALL branches of the U. S. Armed Forces. The one at Parris Island, NC! Basic "soldiering skills" need to be the same for anyone who is serving in the armed forces, since they can all be exposed to combat and wartime survival conditions on short notice. The average Airman during my time fired 70 rounds thru the AR-15 rifle every two or three years, depending on his mobility status. Each and every time, they were trained as though they had never seen the weapon before, and most of them acted accordingly. What a joke! We used to joke about the Security Police not having bullets in their sidearms, until I had a female SP for a girlfriend, and she told me that more often than not, she didn't! Reason? Too many "accidental" discharges! Reason? Inadequate training, leading to dangerous curiosity among the SP troops, not to mention a lack of discipline. Sooo--don't ask me to fweel sworry for our poor, over-trained troops! I got myself into some pretty hot water during my career, making a stink about the inadequate training issue. I think any move away from that trend is a very good thing, indeed!

Hmm ... I got my original extra thataway - including my commercial telegraph ticket - back in 1966 (along with the 1st phone and radar endorsement). A lapse of over 10 years caused me to have to re-examine in front of VEs - once for the extra and once for the GROL (in 1993). Hey, maybe if I could demonstrate 20 words per minute QLF (sending with left foot), I could get a 1X1 call. Even better would be, um, say W2. Yeah, maybe just W. Of course, they might try a different 3 letter combination with no numbers, starting with A and ending in two crooked letters... Kinda sad how all of us keep arguing what could/should be and don't just try to get on with life and over the CW arguments. Not likely, however.

Hey Toni - Did you never hear that saying if you donl
like what you hear then SPIN the VFO?????

Nobody makes you listen  - so DON'T !

I personally thing we need more ham lightning-rods
like HLH. Does he operate 20 Meters?  We need more
like the good ole days of 14313 IMHO.  They were fun.

WOW Rick !! He's an old timer QRM'er.

I thought this classic line of fun ham radio Op's died out with the great K6KPS !
Remember him...????   "This is K6KPS in beautiful Southern Cal callin CQ...."

What frequency does HLH operate on..?   Is he as much fun as the great (original)
W2OY..?
He's another one from Radio history - "CQ CQ No lids no kids no space cadets"
Of course there's also the great Big Al - K4OKA - Old King Alligator who's another
legend
from 75 Meters - but alas he's not on much anymore. I miss him too.

This guy may be just the shot-in-the-arm that ham radio needs since the demise of
14.313 and the
classic 75 Meter wars of the 70's and 80's.

We're talking about reality here, Dick. Again, if I have equipment, I would have the equipment I own or nothing at all (can't run to the store and buy a new radio on a remote enclave). Since I don't own a low powered transceiver, I'm not going to have one to use on that remote enclave. And, if I have the equipment I own, I'm not going to need CW to contact help. THAT is reality.

Let me give you a reality check. If you were stranded on a remote enclave, would you rather have a full featured, all mode, transceiver with sufficient power output, or a low powered transceiver setup like Larry described? The answer is obvious - any person in his right mind would choose the high powered transceiver. I'm in my right mind, therefore I'd rather have a high powered transceiver that will really reach out and get me the help I need.

This is especially true if I have limited power available for my radio - I'd much rather have one shot on a good international frequency at full power than a dozen chances at low power in the hopes that someone will hear my weak little CW signal.

```

That call sounds familiar, but I can't say I remember. I stand corrected on the frequency...it's 14.177.2...just close enough to 14.175 so that Advanced licensees couldn't squeeze in below him. And as far as he was concerned, God allocated that frequency to him, and he just calls CQ on it anytime he wants, even if there is a QSO in progress. That's about the same spot the "Hi Fi" guys (W2ONV et. al.) hang out, and they get an earful from time to time!

If they're legal, why would they need to violate FCC rules? It's akin
to riding a motorcycle with or without a license. Exactly the same act
is either legal or illegal depending on the existence of a license.

Since you want to expand beyond ham radio, are you advocating that the entire
population be forced to learn Morse code?

>Why would you say that, Steve. I agree with Cross completely;
>if the FCC were forced to decide everything about the way we
>operate and use our bands, it would not meet our needs.

And he SHOULDN'T be making that decision. It should fall within the purview of the NPRM/R&O program. The "tone" I take from his comments was "shut up". Perhaps he didn't mean it that way, but that's what I got from it. It that WAS what he meant, he needs a reality check and a reminder who's financing his mortgage.

>His attitude appears to be one of humility to me<

Humility? Hmmmm.....I had another adjective in mind....Not a profane one, but not "humility"....

>Sure, like we asked the FCC to do something about all the people who >were abusing the code-disability-waiver process, eh?

You get what you pay for. Except for my Vanity call, I haven't sent the FCC squat since my General way-back-when. And even when we WERE sending them money, they weren't getting it.

Thanks for the perspective, Phil. I don't argue the above at all. My point is that we don't need a federal offical implying (to my perception) "shut up or we'll do it OUR way".

>   Bill's job is the former. Riley's job is the latter. They are not
>   interchangeable, nor should they be.

I agree again. And I stand by my assertion that we don't need federal officals telling us how they are going to protect us from ourselves.

> It comes from the same place that YOUR paycheck came from when >you were on

active duty, Gunny.

Granted. However I wasn't standing up in front of a bunch of people telling them "get with MY program or you're out", either, Phil.

> Get out of his face and let him do the job that the People of the
> United States appointed him to do - amateur radio rules and policy
> specialist.

I am not in his face, Phil. I am commenting on comments HE made relative to his position with the FCC. And if I am not mistaken, he was not appointed by the People (requiring the consent of the Senate or Congress before being hired)

> And it's his RESPONSIBILITY to analyze that request and recommend >agreement, disagreement, or modification, and enactment by the Five >Wise Folks only if appropriate.

Granted. But where does it say he can insinuate that if we don't toe a certain line, we are "out"...?!?! HE has this authority?

> I may not always agree with Bill's positions, but he's telling it
> as it is, and I'm with that 100%.

Expressing an opinion is on thing, Phil. Expressing it as if it carries the weight of policy of the Government of the United States is another.

>Been there, done that.

Since you mentioned my previous employer and the fact that you once too served at the FCC, you will remember the Government has certain policies and regulations on it's members making certain statements in public. In my case it was usually about participating in organized politics or discussing the policies of the civilian government that controlled it. (The Armed Forces)

I seriously doubt that Mr.Cross is at liberty to make "defining" comments that can be misconstrued as "policy" of the FCC without some sanctions being imposed.

Depends on what you mean by "equivalent CW transmission".

The peak-to-average power ratio on SSB varies all over the place, but let's say it's 4 to 1 (uncompressed). That means a 100 watt PEP SSB transmitter actually demands about 25 watts average.

On CW, the key is down about 40% of the time, so the peak-to average is about 2.5 to 1. So a 100 watt CW transmitter actually demands about 40 watts, average. But CW has about a 12-14 dB advantage over SSB (because of narrower bandwidth and the fact that it's a "fully voiced" signal). So the CW signal could reduce power by 12-14 dB and still be as readable as the SSB signal. 12 dB is 16 times power ratio - the 100 watt CW rig could be turned down to 6.25 watts peak or 2.5 watts average and still be "equivalent" to the 100 watt PEP SSB signal.

Good luck on this one now!

Sounds like the DoD's fault, Dwight. ARRL has no way of knowing whether a mag
or renewal got to you.

I once missed a QST because of a move. Sent the ARRL a note about it and they
sent a replacement QST. Then the original showed up, having been forwarded by
the new occupant of the old address. Somehow the post office had missed the new
address notice.

In article <9ekevr01tb5@enews2.newsguy.com>, tlbryant@my-deja.com (T. L. Bryant) writes:

>According to the comments of one FCC official back in the late 1980s, hams
>attitudes regarding code testing had quite a lot to do with it.

OK, I'll bite - who was this official? What were the exact comments he made? WHy has this not been publicized?

--

The 220 and nocodetest ham license situations go back a long way - at least a quarter century.

Back in 1975 or so, the FCC proposed a SEVEN class "dual ladder" license system for hams. The "HF ladder" would be Novice/General/Advanced. The "VHF/UHF ladder" would be Communicator/Technician/Experimenter, or something like that. Extra would be the top of both ladders. The Communicator license would have had no code test.

Almost nobody liked this scheme, and it went away fast.

About this time, the EIA (a manufacturers' group) petitioned the FCC to reallocate 220-225 to the Land Mobile Service, and create a new "Class E" CB there. The idea was migrate CB to channelized VHF FM. The manufacturers liked it because 27 MHz CB sets and antennas be made obsolete by such a change. The FCC liked it because it eliminated some of the problems of 27 MHz CB, like "working skip". CB users hated it for the same reasons the manufacturers and FCC liked it.

The ARRL and other ham groups and individuals fought the proposal like crazy. The EIA modified it to take about half of 220, then finally gave up. The reason they went for 220 is that it's not a worldwide ham band by treaty. The FCC could reallocate it if they decided to.

About 1983 the FCC proposed a nocodetest ham license, and again hams were so against it that the idea went away. ARRL leadership pushed very hard against it.

The JY1 story that resulted in waivers in 1990 is well known, and will not be repeated here.

The FCC tried again to create a nocodetest ham license in 1989-90. At this same time, the idea of reallocating 220 came up again. The ARRL BOD came up with an idea: they would back the nocodetest license idea by proposing a new license class that would have limited privileges and no code test - a sort of "VHF Novice". And this license would have mostly 220 privileges! So almost all new hams with that license would go on 220, keeping it busy and increasing the demand for 220 gear. FCC saw through that gambit and just dropped the code test from the Technician class license. Then they reallocated 220-222.

Maybe this last is what the FCC guy meant by "attitude".

Hmmmm......I guess YOUR post was "large" caliber..???

You are SUCH a card, Hansie.! Always the joker! Thanks!

Of course I ALWAYS look to YOUR posts for leadership and guidance as to how one should conduct themselves in a public forum. A true gentleman in ALL respects. ("Quick, Doc..I need a shot of PHENERGAN!")

Of course we ALL know Hans NEVER engages in any flaming/trolling/childish behaviour. His conduct is ALWAYS sterling and his posts ALWAYS address the topic matter of the post without deviating into persoanl attacks, denigration, etc etc etc.

Kinda like the above comments addressed the topic matter of the thread...?!?!

Fire away, Hans. If anyone in this NG understands the etioligy of the aging process, it's me.

You, like Lennie, have a need to find some last bastion of control over your life and this NG is it...OK..Have fun. You have earned your retirement, now make the most of it.

Boy, this is a good example of why one has to "study" to get a ham license. :-)

>> are in call area 13, and Hawaii now also has the KH7 block,
>> too. (Call area 13 consists of all calls from KH0 through KH9.)

>That bit of trivia is old news, calculated misdirection, and obfuscation.

     "Calculated misdirection"...?!?!

     "Obfuscation"...?!?!

     Is the information NOT correct?  Are the "KH" calls NOT in the 13th call
area...?!?!

>You had no more right to a KH2 call than Deignan has to a KH6 or KH7 >call,
and both callsign requests were spoofs of the system.

     You. of course, can PROVE that Jeff obtained the call fraudulently...?!?!

    FCC regulations REQUIRE the surrendering of a "KH" or "KP" call when the
licensee moves out of that respective jurisdiction?

>So sue me.

    For being stupid and insulting..?!?!  Not worth anyone's time.  But you go
right ahead and have a good time.  We'll just sit back and snicker.

    Again.

Time to develop some sort of digital mode for use on HF that
encodes your voice and gets it thru conditions that SSB
doesn't hack. Think of all the DX you could do.
(No I'm not talking CW, I mean real voice
digitally compressend and encoded over some sort of
RF carrier.) This new mode should not unduely interfere
with existing modes like SSB.   Just sound like white noise
at worst. We could actually invent something good here,
something other services might want to use.

They'll surely be impressed with the expertise on those groups.

OTOH, if they search for ham-related NGs on their own and their
newsreader lists groups alphabetically, .misc and .policy will
appear third and second from last in the r.r.a hierarchy; by
the time they get to those two groups, they will again have
been exposed to a tremendous amount of expertise on the other
groups and will already have formed a good image of amateur
radio.

And this is a good example of why one shouldn't jump the gun and come to
a conclusion before he's read the rest of the thread.

I guess I wasn't, or at least we didn't have Internet to help them communicate their disgust to me, that brand new ham.

Did they use all the same rhetoric as those that are saying the same today? Was the doom of Amateur Radio forcast with certainty and great bewailing that now the bands were going to deteriorate to the point that it would no longer be ham radio?

>From: k4yz@aol.com (Steve Robeson LPN)

> Granted. However I wasn't standing up in front of a bunch of people
>telling them "get with MY program or you're out", either, Phil.

I didn't get that from Cross' speech, Steve. I got that he wanted to see ham radio get with its own program, because if ANY individual came up with a program, it would not suit the needs of most. Don't misunderstand that he used himself as an example of who might be tasked to come up with a program if hams insist to the FCC.

> And if I am not mistaken, he was not appointed
>by the People (requiring the consent of the Senate or Congress before being
>hired)

You can't really expect Congress to appoint low-level staff at every federal agency, Steve. C'mon, let's be real here, man.

> Granted. But where does it say he can insinuate that if we don't toe a
>certain line, we are "out"...?!?! HE has this authority?

He may have the authority to make that recommendation. He may have a sense of the Commission about how they will react if Amateur Radio keeps asking the Commission to solve its petty squabbles.

>Expressing an opinion is on thing, Phil. Expressing it as if it carries
>the weight of policy of the Government of the United States is another.

It is the Commission that ultimately approves policy, but Cross has and will cotninue to have a strong role in making recommendations to the Commission when he is asked to do so. If he tried to keep that secret, you would damn him, but when he discusses that candidly, you damn him, too.

>I seriously doubt that Mr.Cross is at liberty to make "defining" comments
>that can be misconstrued as "policy" of the FCC without some sanctions being
>imposed.

I am sure he is well aware of where his personal opinions stop and where policy begins.

What I really don't understand is why you are faulting him for essentially telling Amateur Radio to solve its own problems because imposed solutions -- the only other real alternative -- are not usually the best for anyone involved.

>Why restrict your question to just ham radio?

I restricted the questiont o ham radio because the question of Morse code use in the other services was settled years ago.

Even so, it the past 25 years, what percentage of iceberg reports and weather warnings do you estimate was delivered commercially by Morse code as opposed to other modes such as voice or digital?

As to WWI and WWII, I agree; Morse code once played a vital role in radio communications. That is a good part of why it once played a vital role in Amateur Radio testing. It was part of the relevance of Amateur Radio to the technology of the day.

Problem with that one is that it is very hard to tell whose brake lights came on because of the detector and whose brake lights came on because the driver saw other brake lights. When I am tooling down the highway and see several cars in front of me braking, I always slow down a bit -- for a number of good reasons. :-)

A better ploy would be to leave that beacon operating until drivers got used to it, then set up a real speed trap. :-)

Who is we kemo sabe? About a thousand years ago, the Handbook spent a lot of ink on shaping of keying to eliminate 'key clicks' and excessive bandwidth of CW signals. It pretty well came down to 'there ain't no such thing as square wave'. Wouldst that this should be reprinted and taken to heart by a later generation of digital engineers and designers.

We have arrived at the point where digital TV takes closer to 30 MHz than 6, the AM replacement being tested gave up trying to do it in 10 kc but admits to taking the guard band as well and the FM replacement is an equal fiasco. This happened in the early days of modems as well. And none of the systems stand multi-path or selective fading for squat -- they fold up like cheap tents in a gale. The early experience with TV would indicate a compatibility problem you won't believe.

My purpose is not to piss on digital but rather to point out that there is more to it than a specification in a Usenet posting. The modem problem was solved with a lot of pain and a lot of playing and shaping audio tones to eliminate the interactions of the tones with each other and stand up to line imperfections. A lot of the US internet world still cannot exceed 33 kbs as we speak. A similar problem on a grand scale awaits the digital designer.

Get to work Mr. Casey

Yes, they have, but Amateur Radio has all of the needed flexibility under existing rules to start to make that happen. Maybe it is starting to take off, with sound-card digital modes being invented or used in Amateur Radio left and right, software-defined radio getting into the hands of hams who are doing some cool things (2-way moonbound with 5 watts, as just one example).

> Many of us are professionals in our
respective areas and thus know that old
> technology falls by the wayside to make room for newer, and better
technologies. >The Amateur Service is no different.

It is different in one important way; not enough of those professionals with the expertise to make it all happen in the Amateur Radio are sharing it with hams. Just as one example near and dear to this group, Carl Stevenson, WA6VSE, could share an immense amount of knowledge with us all, but he is choosing to work on adminstrative matters involving Amateur Radio -- removal of the code tests and leading NCI -- instead.

I agree; perhaps we are fixated on the wrong things.

>What we really need to discuss here is how best to use the new emerging
>communication technologies instead of wasting effort debating "the

He should if his boss asks him too, Steve. The FCC has relied on Cross for a recommendation on many issues over the years. It is likely that they will continue.

>It should fall within the purview of the NPRM/R&O program.

Well, yeah. Do you really think that Cross doesn't know that?

>It that WAS what he meant, he needs a reality check and a reminder who's
>financing his mortgage.

Yes, the same FCC that will ask him for his input if Amateur Radio is unable to resolve its petty squabbles and asks the FCC to make rules to do so.

And the mode can't be SSB if the operator does not have a microphone. Would
you suggest that the FCC mandate that hams be required to keep an SSB station
available for emergency communications at all times? If not, your goal is not
as you have stated.

>SSB signal.

>Good luck on this one now!

You didn't factor in the data rate in your calculations. At 20 wpm, the CW
signal would have to transmit about 10 X as long, as compared to a speech rate
of 200 wpm.   I think OOK CW then comes off as a loser, so seeing as this is
the issue that determines whether we will have code testing in the Amateur
Radio Service, you can inform the ITU that the matter has been settled now on
rrap. :-)

What with processing delays and having to send mailing labels to the printer and such, with 4 moves that year, I can understand how that happened.

Those members who do not receive their QST for any reason or whose QSTs are damaged, can call or email ARRL HQ and ask for a replacement. It will be sent out by First Class mail. Perhaps you weren't aware of that when you made your decision that QST forwarding not being able to keep up with 4 moves in a year was a reason not to renew.

> And I never received anything about renewing my membership either (of
> course, in my case, the renew invitation was probably sent to one of those

More than likely. If you send me your current address and a list of QSTs you didn't receive, I will send them to you -- along with a renewal notice. :-)

>Sounds like the DoD's fault, Dwight. ARRL has no way of knowing whether a >mag or renewal got to you.

Actually, in the case of the magazine, we probably do. Those whose forwarding orders expire are usually sent back to us -- well, the cover anyway -- by the USPS. That return costs ARRL about 60 cents, if memory serves. In those cases, I think the presumption is that we are unsure of the correct address, so the best thing to do is to wait for the member to request the QST. Otherwise, QSTs could be going back and forth ad nauseum.

>I once missed a QST because of a move. Sent the ARRL a note about it and they
>sent a replacement QST.

That process seems to be acceptable to most people. I think it balances the need of the member vs the costs of trying to redeliver QSTs to a dubious address.

Sure they are, Ed. You have the good sense to temper your remarks based upon your situation. I did not make the remark as a slam against you.

If I state an opinion which doesn't help amateur radio or hurt amateur radio, that's a wash. My comment was directed toward an individual who frequently uses cliched and insulting terms so he knows the turf well. I'm not much in the mood for "huggy-kissy" at the moment. I'm pretty tired of individuals who think that my view is killing amateur radio. I'm tired of those who speak of spectrum auctions and I'm tired of those who don't know that the ARRL is a membership organization of radio amateurs. See--I DO believe otherwise and I didn't even need a welcome to believe what I believe. The welcome wasn't yours to give.

I have heard much less about such radar detector enforcement efforts
since highway speeds have been raised to more practical limits.
The actual use of radar detectors has probably dropped
considerably since speed limits went up. My Passport
detector hasn't been in my car in several years. Time was when almost
anyone doing any significant interstate use had a detector.
I don't see that anymore.

Today I believe only two states (VA and MD) along with the
District of Columbia have radar detector bans. CT used to also
but that was repealed several years ago.

Cheers,
Bill K2UNK

Because the issue is tied to the rational by some
people as justification to retain morse testing of amateurs.
See more below.

>In the maritime service,
>an untold number of tens of thousands have been saved because of Morse.
>Ninety years of iceberg reports and severe WX warnings issued from shore
>stations, SOS calls from burning or sinking passenger liners, Navy and
>civilian ships struck by mines during WWI and WWII -- the list could

All true...but totally not related to, nor any justification for,
continued morse testing as a license requirement for amateur
HF licenses.

Cheers,

What do the police do when their radar guns causes someone to die in the
resulting accident? Egads Ed, you're starting to sound like Larry and Dick.

I see Cross's comments aimed at those regulations that
hams want to keep or to add to current regs.  The FCC is
clearly going in the direction of "less specific" regulation
and wants a "consensus" in the ham community to either
KEEP certain current regs and/or to ADD new regs.

Assuming that may happen, the police are "licensed"
to use the radar guns.  Does your friend have federal
authorization?  Additionally, you noted that your friend
does this deliberately when he sees a vehicle pass
him at what your friend decides is high speed.  Sorry,
can't accept the above as any justification for your
friends UNSAFE and ILLEGAL activity.

No cheers again,
Bill K2UNK

If you are a ham operator you should be allowed to have a radar detector in
any state. After all it is just a wideband reciever. I would try fight this
if i ever got caught.

>lost; what was the question again?

I think I remembered the question. You offered to double up on the lobster dinner based on how you think I would answer the question what mode I would try if I were the only ham in an enclave of survivors depending on ham radio for rescue.

In my case, the answer is very easy. The only mode I would be apt to have with me would be CW because I not keep my HT charged or even own a working microphone. I certainly wouldn't have any mode with me except for CW if I were in that situation.

Do I get the 2nd lobster, or not?

Now, I imagine that hams who had a choice of mode would try a voice mode first.

Exactly Cecil,
what happens when one of these guys goes by walmart and the auto door opener is generating lo-power X band.
And sets off the radar detector. The driver must have control of his vehicle at all times no exceptions.

I don't know; I would have to read the resultant police report, but I can be assured that they will not be amused. Does your friend have the same accountability as the police would if their radar gun caused an accident? Would he fill out a report on the incident and sign his name?

>Egads Ed, you're starting to sound like Larry and Dick.

I have disagreed with Larry and Dick on a number of occasions, but if they do not think that causing other drivers to fishtail at high speed is amusing, we have found some common ground.

As far as I know, the feds use radar to do some sampling of highway speeds and tie in federal monies for highways and such on the compliance of the state.

States with no bans on radar detectors may have higher compliance. :-)

In theory, an FSK or PSK signal has an infinite number of sidebands if the frequency or phase shift is instantaneous, although these sidebands do diminish with distance from the source. In practice, there are a number of ways to address this, all of which are one form or another of bandwidth limiting.

A PSK-31 signal is bandwidth limited by filtering after modulation (all in DSP, of course). The resultant PSK signal is of reasonable bandwidth, but the result is that it has amplitude as well as phase variation.

I see no reason that digital modulation techniques would not use as good engineering practice as is used by OOK CW and SSB.

>We have arrived at the point where digital TV takes closer to 30 MHz than 6,

Does not it also bring with it significant improvement in video resolution?

Agreed.

> The modem problem was solved with a lot of pain and a lot of playing and
>shaping audio tones to eliminate the interactions of the tones with each other
and stand up to line imperfections.

Is that pain not part of the challenge of Amateur Radio, and of its worth?

So if one is licensed to use a radar gun it is OK to cause
people to die in the resulting accident?

> Does your friend have federal authorization?

I don't know. The device looks like one of the GM car lock/unlock
gadgets. I doubt that it puts out enough power to violate any
laws. Note that I am not the one doing it.

Yes, from my point of view, that is a pretty important issue.  From the
members' point of view, the resultant actions and programs are what it is all
abot.
```

>I dropped into the old-fashioned local ham store this morning for
>awhile. It's gonna close next week, the last of those Mohicans around
>here.

Yes, smaller stores in all retail areas seem to be giving way to the big chains. Unfortunately, I think that some hams went to the local store to play with their demo model, then ordered by mail from a big chain because the multi-thousand dollar rig was $100.00 cheaper there.

>The absolutely appalling truth which came out of this encounter with
>an innocent with the classic lust but with no clue was that he had
>absolutely no idea whatsover that the League even exists, let alone
>know anything about it's missions.

I believe you are telling the truth, but I must admit that I find that surprising. In today's web age, a search on "Amateur Radio" will find site after site with links to the ARRL home page.

>The ARRL needs to get out of it's box.

I presume that doing so will be a major responsibility of the Marketing person. However, the League currently does a mailing to every new ham. I don't know how much more it can do than to personally contact every new ham and to make tons of information about ARRL and its missions available on the web page.

Can you suggest anything more effective? I will pass the ideas along.

One night I drove onto an Army Base in CA. My VHF rig was sitting on
my dash. The guard told me I couldn't enter with that radar detector.
I fired up the local repeater, showed him my FCC license and he let
me in.

there are many "false" alarms with radar detectors do these cause horrific accidents? If so who is to blame ? Again Just because a radar detector goes off does this mean you slam your brakes on and lose control of your vehicle. The driver is at fault 100%.

The larger question is: Can a radar gun "cause" an accident. My
friend's device is about the size of a silver dollar. I doubt that
it puts out enough power to be illegal.

If someone runs over a pedestrian in a Walmart parking lot because
their door openers caused the radar detector to go off, do you think
Walmart would be responsible?

Yeah, what 'fools the locals' is when one day that 'dummy' becomes a
real live radar car....

I'm light years ahead of you, Bert. The people involved know who they
are. Any former 27 mhz type who wants to abandon all that in favor of
ham radio is welcome, and they know it. Dual roles not included, sorry.

Bill, The use of radar detectors itself has fallen off from my observation of traveling the turnpike daily. But then again radar use itself has as well, when there is a pack of vehicles all going above the limit as usually is the case on many highways troopers with there stealth cars blend in with traffic then pounce on the car that blows by He then visually sites the car, checks his speed. then paces the car Radar is not needed. The officers trained eye and calibrated speedometer usually are sufficient evidence in court. Most Leo's while running stationary radar don't transmit continuos, when they see a vehicle they then turn the beam on thereby eliminating the radar detector.

"Bill Sohl" <billsohl@mindspring.com> wrote in message

Uh, sorry Dwight- the disability waiver isn't anywhere near 20 years old. Prior to its instigation, around 1990, there was NO privision for a medical waiver. If he has been a ham for 20 years it's because he learned the code and passed a test on it.

 And since he can't, he resorts to the old "It has never happened so far
(so far as anyone here can quote) thus is is unlikely to ever happen".

 Most hams never find themselves involved in emergency situations of any
kind where they need to use their rig to send emergency traffic. Thus,
it makes sense to just ignore the emergency communications potential of
ham radio.    We see.

Can't disagree with a thing except that the reason that we went to a digital
TV standard was to get better resolution in a 6 MHz (8MHz in Europe) channel
as opposed to a competing Japanese analog standard which was at least honest
about taking 30 MHz. Just how an 800 kHz FM signal digitally is an
improvement on a 150 analog one escapes me, similarly 50kHz AM.

There are trade-offs anywhere along the line, your PSK31 example is a good
one. The biggest one that occurs in digital work from step one is that
speed implies heat implies crud. When the clock speed is a leisurely 8 MHz
the old CMOS chips with very large ambiguous zones worked admirably (and
make great keyers in hi RF environments like Field Day); at 1 GHz or so you
belt the chip firmly across the la bonza with lots of current available to
shift state right now -- no real choice. Get a big blower for your Pentium
22 - probably will say Cummins on it. I might submit that solving the FSK
problem, solving 15 kc audio, and a few channels of 5 MHz video might be
similar in theory but a lot different in practice. DSP is certainly an
approach (admittedly a bit beyond my ken) but it has, as you note, some
trade-offs even on a lo-speed data channel. And at some point, the pride of
ownership is second only to the expense.

It is the challenge to digital to replace systems which more-or-less work
already, systems with a significant wetware component that to some extent is

the reason for being of Amateur Radio to begin with. So far, the software has been a help to the wetware but is a long way from replacing it. Not to suggest that development should not continue but the Digital Revolution on the ham bands starts the race with one foot in a big oak bucket.

and a worthy occupation it be. The consultant may even earn his money here. His problem is in three parts:

A. Getting the fact that the League does a lot of fine pubs before a wider audience. In this case, it might even be worth cultivating CB.

B. Segmenting both the product line and the customer base. Jon Bloom does an admirable job on CDs but this is at best a restricted market, an Extra is a lousy prospect for a license manual, etc.

C. Marketing at a price. As Ed points out, the prices could be higher. The margins are intentionally a bit thin and most mass solicitations have a low return rate that only can be made to work if you don't, as in yesterday's mail, send baby supply solicitations to 57 year old single men.

The new buzzword, data mining. Which always arouses a picture of Doc, Sneezy, et al heading for the mine. Hi Ho, Hi Ho, it's off to work we go.

It makes sense to maintain a reality oriented perspective toward the emergency communications potential of ham radio. You and others are simply NOT reality oriented and are bogged down in an unreal pie-in-the-sky-is-falling mentality. Your fantastic doomsday scenarios are all in your minds. If you multiply the independent probabilities of everything that has to happen for your scenario to come to pass, it might happen once every 100 billion years.

Do you really think I cannot answer the question Larry asked about what mode I would use first if I were involved in an emergency situation?

>he resorts to the old "It has never happened so far
>(so far as anyone here can quote) thus is is unlikely to ever happen".

We are in agreement; it is not likely to happen that an emergency arises for which CW is the only mode that can be used for communication.

> Thus, it makes sense to just ignore the emergency communications potential of
>ham radio.   We see.

No, "we" don't see, Dick. I think that ignoring the fact that there are better ways to ensure emergency communications capability than testing hams for Morse code is the real ignoring taking place.

Was monitoring Col. Steve on 3.260 United Patriot Radio last evening. For those who don't know, United Patriot Radio is a self-declared "free" radio station operating from Eastern Kentucky on the shortwave frequency of 6.900 mHz (day) and 3.260 (night) mHz. Programming is "Patriot / Freeman / Soveriegn Citizen" oriented. This station is also the new de-facto broadcast outlet for the Miltia Movement in the United States. Some say it's a Clandestine. Other say it's a Pirate. Whatever the flavor, the station is certanly the most curious transmitter on the dial since the days when the legendary Wolfman Jack was broadcasting into the USA from Mexico or the late Rev. Carl McIntire took his ship "Radio Liberty" off of the New Jersey coastal limits to broadcast, sans-licence, in the 1960's.

Col. Steve said two pending changes with the station are in the works. The first being operations on the freq of 3.260 USB will be terminated sometime around the 1st weekend in June. Reason is the onset of Summer thunderstorm season and the resultant high level of atmospheric (storm) QRN, all operations will soon be on 6.900 USB only. Second, Steve reported that his "3 Kilowatt Rock Crusher" amplifier should be up and running shortly, thus the new transmitter power of 3000 Watts on 6.900 USB will allow for greater coverage of UPR. Some of the station's "staff" apparently made the trip

to the 2001 Dayton Hamvention, and managed to obtain the balance of
components necessary to complete the proposed 3.0 KW power amplifier.
Hope that UPR has a small air conditioner and duct-work in place to cool that
thing!

Finally, information on 6.900 UPR radio now appears to be being
hosted on the PBN web page which is at http://www.pbn.4mg.com
There is also an extensive write up on the station in the new
issue of Monitoring Times.

>gadgets. I doubt that it puts out enough power to violate any
>laws.

The GM gadgets genearlly operate under Sec 15.231, as a periodic radiator. As a manally operated device, to radiate at that rather significant field strength (about 5000 uV/m at 3 m) it must have circuitry that stops it from transmitting if the button is held for more than a few seconds. Did the 10-GHz device your friend was using contain that provision?

>Note that I am not the one doing it.

Duly noted.

>From: "Richard McCollum" rmccollOMA@worldnet.att.net

>The surprise is that I heard nothing about any other publication.

That is indeed most unfortunate. I know that the Web page presentation of pubs "ads" is working on being context based, but trying to sell a Handbook a year after a purchase doesn't make sense. If most hams are like me, they would buy a new Handbook every 4 or 5 years. Most years, the changes are not major.

>There are any number of things the League does well including
>your shop but making the connection between the activities of one Ed Hare
>and my wallet is a marketing issue.

Don't get me wrong, btw, I very much agree that ARRL needs to make significant improvements in its marketing and, related, in the way it tells its membership about its work. To that end, I finalized the deal yesterday where ARRL's new RFI guru, John Phillips, K2QAI, the newest Labbie, will be writing a monthly "RFI" column for the ARRL Web Extra. It will outline some of the work the Lab has been doing and some of the reported cases and solutions, or lack thereof.

It really all stemmed from a conversation I had at Dayton with one of the hams who happens to work at the FCC Lab. He urged ARRL to report more RFI cases to the FCC. The Commission is not fully aware of the extent of Amateur Radio's problems with interference. I thought about it all the way home (long drive) and at first figured that a monthly RFI report, to be sent to the ARRL Board and to various bureaus in the Commission would be a good idea. But then I realized that it is not enough, so why not take that same report and make it a bit more "journalistic" and put it up as a regular feature on the ARRL Web page. Heck, maybe it will start a trend. :-)

>In one short sentence, the League does a lousy job of blowing its own horn.

Consider the above at least a toot. :-)

>I am not particularly down on the League except that its decision-making
>process does not seem to have recovered from the dictatorship days.

In what way? Can you offer any examples? IMHO, the ARRL Board has gone a long way to informing its members about what major issues it is considering and asking for input. The ARRL Board members publish their names, addresses, phone numbers and email addresses in QST and on the ARRL Web page, asking for input. They go to conventions and club meetings, asking for input. I think that characterizing a group of people that do that as "dictatorial" is an unfair characterization.

>From: yodoc@aol.comnospam (Larry Roll K3LT)

>not to mention that it requires that computer and its complicated,
EMP-sensitive circuitry to have
>survived whatever catastrophe

Perhaps that explains my indifference, Larry; I live close enough to a moderate sized city that I will not survive the initial blast.

Perhaps we could have rules that stipulate that hams who live far enough away from urban areas that they might survive whatever creates the EMP to retain knowledge of Morse code and to maintain a station capable of operating Morse and SSB on HF and FM on VHF for 4 hours without power.

> We're NOT discussing the "legality" of that, or any
>other, mode.

>>>How does eliminating the ability for radio amateurs
>>>to exploit

I apologize. When you used the term "eliminating the ability" of radio amateurs to exploit the benefits of the mode, I naturally assumed that you meant that you believed the mode might somehow be made illegal. I am not testing on PSK-31 varicode, but I still have the ability to exploit the benefits of PSK-31. The only thing I could imagine that would take that ability away would be to outlaw PSK-31 on the ham bands.

>I suggest you save such cheap tactics as the above for someone stupid
>enough to fall for them.

I guess I took your words too precisely.

>Take a few "ARRL Attaboys' usually reserved for someone who

ARRL does not pass out attaboys for my posts on rrap, Larry; they do give me a few for my work on RFI and spectrum matters.

>Gimme one of those "ARRL attaboys!"

Wish I could, but I don't pass out attaboys, either.

>Hmmm -- sounds good to me, perhaps I should have!

You could, of course, intiate a request for rulemaking. How this was received by the FCC and by your fellow hams might give you a better view of the validity of your idea.

>Uh hunh. Yep. I see. Roight. And batteries have to be.....what's the
>word I'm looking for? Ch.....Ch.....something that sounds like that....

And the batteries you intend to use don't? I don't understand this very well, I am afraid.

>OK, here you go...time to roll out those large,
>expensive, high-capacity solar panels, or rig a bicycle to an alternator,
>or start collecting lumber to build a windmill, right??? Right...

Requiring hams to maintain some such capacity as a condition of license would be more useful toward facilitating emergency communications that requiring them to know Morse code. If that is REALLY your goal here, Larry...

>Yawn. Sure. As long as it doesn't require anyone to make the effort
>to learn a useful communications skill, that is. Got it.

You think it is harder to learn Morse code than to build a windmill? How odd.

Now, if you think it should be about effort (again), that is a whole other thread. :-)

>Obviously, you can't answer my question. Just as I thought.

Actually, I can, Larry. We are just discussing the terms. If Morse code testing is related to whether non-code people who are hams can send Morse code in a dire emergency using a lookup chart, then I think it fair that we make the test by selecting a group of people who will have passed a written exam that includes some basic information about Morse encoding, don't you?

Now if you think that Morse code is not and need not be related to testing at all, then the whole point is moot.

>C. Marketing at a price. As Ed points out, the prices could be higher.

Yes, but the ARRL creates publications for more than just revenue. Two good examples are the RFI Book and the RF Exposure book. I was involved with some of the pricing of those and the price was deliberately kept low. The information in those books is pretty important to ham radio, so they should not be seen as a major revenue source.

All in all, I feel comforatable with the balance.

Like we've never been here before . . somebody help me, you'll do Ed.
We have a bunch of archaic analog modes dominating ham operations
across the spectrum. CW, SSB, FM. Plus some much newer keyboard-based
modes, some elderly 2m packet, etc. They work fine. They're not
causing any problems, ham radio is not "broken" in this respect.
>
So along comes a lot of recent-era chatter about "ham radio absoluteky
needs to move into the digital age" and variations thereupon. By the
FCC, by the ARRL, by many of the technically-competent amongst us,
it's all over this NG.
>
My basic "disconnect" is that I can't get any grip on what is really
driving this whole thrust to move into digital ham comms. I'm missing
a clear explanation that makes sense from both the improvement in
operations and regulatory perspectives just what we would get out of
"going digital".
>
Because it's more "modern"? Because everybody else is doing it so we
gotta do it too? To promote experimentation? Because the FCC sez so?
Why do they say so? If no then just what IS the big deal? I don't get
it.
>
I'll admit to some jaudice in the matter. I don't see where ham radio
is "broken" and has to be "fixed" by moving wholesale to digital
comms. Not to mention that all I see out there amongst the digihams is
talk and no action, I ain't holding my breath.
>
The keyboard based modes are one level of sophistication and
attainability, moving mainstream ham radio operations into digital
comms is another whole bag of worms physics being what it is. Unless
the whole character of ham radio is dramatically changed - which is

not gonna fly for some very long time if ever. There has never been a
new mode adopted which wasn't compatible with the existing modes in a
given ham band so forget wideband HF modes.
>
We'll see.

Xref: archiver1.google.com rec.radio.amateur.policy:22262

I recognize that this is a very knowledgeable group with wide and varying opinions. Lately, my fourteen year old niece and I have been practicing the code. At first, we used a single code practice oscillator in my brother-in-law's living room. However, since they live a good fifteen plus miles from our house, this can be somewhat inconvenient. What we did was use our legal CB's combined with the MFJ code oscillators to practice our code. I made mention of this on QRZ and got trashed for violating Part 95. Not a biggie, I've done that before...once or twice. I scoured Part 95 and could find nothing concrete to either support or forbid the use of CW on CB/11 meter frequencies as long as all other rules/regs are adhered to.

Anyone who has read my bio on QRZ knows I got my start in radio from an h/t. I seemed to remember that h/t having a Morse key and the code placarded on the front. It was an FCC type accepted radio, so reason stands that the commission has no problem with it. I recently acquired a FCC type accepted Sears h/t, manufactered by Pierce-Simpson, that also features a code key and the code placarded across the front. Like my old h/t, it comes with crystals for channel 14 or 27.1250MHz. I'm also including a link to an item on ebay that I recently bought. It also displays these features and is FCC type accepted. Any opinions or thoughts on the legality of this would be appreciated. I'd like to think that a feature like this could be a nice segue to amateur radio. I've heard no profanity or lid activity in my particular area on this particular frequency. My niece seems to like the code and thinks it's "way cool" because she saw it used on the movie Titanic. I already have a 10 meter radio gift wrapped for her (she doesn't know that) along with a straight key to give to her upon her successfully passing the Tech written and the code. Pretty nifty altogerther. Thanks for your responses.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1239945896

These Precors appears quite similar to the Sears unit, but I couldn't find any frequency info. I've e-mailed the seller and if they are indeed 27.1250MHz, I'll purchase them.

Great start, Hans - but you forgot one:

97.5 Encourage others to join the hobby, and help them get off to a good
start. It doesn't really cost you anything, they will be eternally
grateful, and you will help the hobby grow.

The following URL should be of interest. These two Hams have built a =
digital voice system which they have been operating on the 40m band. The =
problem with work like this is it's not widely reported. Then when the =
results start looking good everyone sits around waiting for somebody =
else to perfect it first before it moves in to main stream use.=20

Maybe the ARRL contest rules should be changed to give huge multipliers =
to stations using new communication modes. That may help kick-start more =
development work along those lines, and get the new modes out there =
where they will be used. The FCC has been sort of waving the stick =
around of late, and the ARRL needs to hang the carrot out in front to =
get things moving.

>I didn't get that from Cross' speech, Steve. I got that he wanted to see ham
>radio get with its own program, because if ANY individual came up with a
>program, it would not suit the needs of most.

Have I missed something, Ed? It was my understanding that the FCC, prior to making any kind of change in the rules, subbmitted them to the NPRM process. At least that has been experience in the last 28 years.

On what occassion has "one" individual made policy of such sweeping nature?

>Don't misunderstand that he used
>himself as an example of who might be tasked to come up with a program if
>hams
>insist to the FCC.

I understand the context of his comments, Ed. I am wondering WHAT prompted him to make some comments about any one person (or the FCC as an entity) arbitrarily making any new bands plans, regulations, etc.

>You can't really expect Congress to appoint low-level staff at every federal
>agency, Steve. C'mon, let's be real here, man.

I am real, Ed. I wasn't the one who made the comment.about him being "appointed by the people".

>He may have the authority to make that recommendation. He may have a sense
>of
>the Commission about how they will react if Amateur Radio keeps asking the
>Commission to solve its petty squabbles.

Perhaps. So far I haven't seen any "petty squabbles" on thier desk. A few silly ideas ("Colt", for one....), but other than the Amateur Community asking the FCC to enforce it's own regulations, what squabbles to you refer?

I think we have gone long distance to "police our own". Short of vigilantism, I don't think there is too much Hams can do in many cases, and FCC enforcement IS the only route. Civil cases in local courts? THAT won't work because it's a "federal" case. And the federal courts have little slack for handling such cases brought by individuals.

>If he tried to keep that secret, you would damn him, but
>when he discusses that candidly, you damn him, too.

Only when that discussion comes in the form of a "don't make me mad or I will make you sorry" tone, Ed. You are right, otherwise.

>What I really don't understand is why you are faulting him for essentially
>telling Amateur Radio to solve its own problems because imposed solutions --
>the only other real alternative -- are not usually the best for anyone
>involved.

Again, Ed, it's the "I can make you sorry" tone that I perceive. It's his JOB to answer the questions, complaints and comments of the public. It just sounds to me like he may be looking to lighten his workload through some carefully worded "suggestions" that if he continues to RECEIVE those questions, complaints and coments, he might be tempted to convince the Commission to help him out.

>Cw on 11 meters is illegal.

Ok, I'll go with that. However, why would the FCC type certify radios that offer an "illegal" mode? Oversight?...I'm finding numerous older h/t's that have this feature. Thanks.

A "consensus" in a fluid, democratic, society? Today's "consensus" is tomorrow's minority.

I think thier best bet is to have programmed re-writes of the regs every five years. I think the 2 year "reviews" are too close.

Pure CW may not be legal, but an amplitude modulated pure tone used in a MORSE transmission is.

Remember that CW is not equal to morse code but instead describes a radio signal that changes between TWO STATES.... Morse code may only use two states (a mark and a space, with the mark state having two durations: Short and long), but with a tone oscillator, it can be used with an "analog-state" (free waveform) modulation.

47 CFR 95.412(b)(1) You may use your CB station to transmit a tone signal only when the signal is used to make contact or to continue communications.

Other than this, all communications must be in voice, but where does the above rule out the use of a morse code patterned tone signal? Furthermore, morse coded transmissions are not in the prohibited list of 47 CFR 95.413.

Thanks for the encouraging reply, Dieter. Do you suppose it's possible to
utilize SSB for the purpose of sending/receiving Morse? I think it'd be an
interesting challenge to adapt the MFJ tone oscillator for this purpose.
Perhaps it coulb be done via the mic jack with NO modification necessary to the
actual radio. Thanks again.

That's not CW, it's MCW, a form of AM where the modulation is a tone.

That's exactly what my SCS PTC2e modem does for CW. But that's probably
illegal on CB. AM operation using an on/off audio tone is probably your
best bet for staying legal on CB. Maybe you can start a CB fad. :-)

Wouldn't that be something? The AM operation sounds about right. I want to keep
this legal and 4 watts is much better than a couple of hundred milliwatts.
Thanks again.

The following URL should be of interest. These two Hams have built a digital voice system which they have been operating on the 40m band. The problem with work like this is it's not widely reported. Then when the results start looking good everyone sits around waiting for somebody else to perfect it first before it moves in to main stream use.

Maybe the ARRL contest rules should be changed to give huge multipliers to stations using new communication modes. That may help kick-start more development work along those lines, and get the new modes out there where they will be used. The FCC has been sort of waving the stick around of late, and the ARRL needs to hang the carrot out in front to get things moving.

Bert,
Why not just email the F.C.C. and ask them. (you don't have to tell them you've been doing it, just ask if you can). All you'll get from the news groups are a lot of opinions.

Probably a good idea, I'll do just that. The opinions are fun too, though. I
wonder if the person who'll answer my e-mail was even in high school when these
CB Morse transceivers were manufactured. Thanks Steve.

How might this be accomplished? I too owned an old Radio Shack h/t that had a
button for Morse code keying. It was all of 200mW, brings back some pretty nice
memories. I'd say this is a pretty pleasant topic of discussion. Nice memories,
a glint of hope...much better than the gloom and doom subjects of late. Take
care and 73.

At this point, I'm going to say you've strayed too far into the topic of another newsgroup - rec.radio.cb, and stop here.

Dwight you are true dyed-in-the-wool blockhead. If brains were a dime a ton you couldn't pay attention.

Jim talks about the many QRP'ers who backapck or otherwise travel LIGHT, which means if they can carry gear at all they must by necessity carry very low powered transcieves and the powre supply needed. That most often is a 5 watt or less transciever and a 7 amp gel cell at most. If you can carry your entire ham station with you into the woods, be my guest. More likely you won't even be going. And for darn sure, we won't have to worry about you sending all dits.

Oh, Brian, you had your sensitivities as did I and everyone else including Ed. But it our day we bucked down and did it without finding it necessary to go to your room and pout your life away, as seems to be the vogue these days.

We didn't wear our sensitivities out on our sleeve for everhone to see and 'honor'.

One really wonders where we'll be when it becomes necessary to act like adults again. We did it well before our ages could support it. Today they seem to never mature that far.

Why did they need to do it in the first place? Because the code test
kept htem from becoming hams? That's what I thought you'd say.

 Wouldn't be a bad idea for everyone who wants license to communicate on
HF radio.

Your thinker is broke. I've ridden a motorcycle with and without a license.
The difference was negligible.

Why not for everyone on radio licensed or not?

 HPM singlehandedly handled that little problem. ARRL per se had little
or nothing to do with it except that he was it's representative, but his
personal persuasivness was the factor which worked.
 I'd guess in another 99 years ham radio won't be even much of a memory,

if it keeps going the current direction.

snip
While strictly speaking, they are in the eastern half of the state,
please call them southern and not eastern. Sumerset is not eastern Kentucky
in cultyre. As an ex-patriot[(:-)] 'hill-billy', I take exception to the
nonesense spouted by this loon. While Eastern Kentucky is backward (maybe too
backwar to have an advanced radio station of this type), and true they handel
snakes, and vote democratic, and are way to ignorant, even they have more
pride and smarts to accept this crap. I listen because they are funny. Much
like the old VOA and Radio Moscow (we will have to talk one day about the time
I got pulled over in Perry county while RM was on my radio, boy was that FUN!)
I wish I could access the banking reocrods of the outfits that "advertise" on
this station. I can not beleive that anyone could make money with the crap
that is being peddled.
Eastern Kentucky has many (maybe too many) real problems, let us not liable
them with things they are not guilty of.

In my day, I did not run into the types of attitudes about newcomers that I have seen on this forum. I am sure it was there, but I was fortunate enough that the people I met were not the type who felt they had to insult the newcomers.

> One really wonders where we'll be when it becomes necessary to act like

Are you suggesting that the new hams should take after you and tell people in public to go soak their heads? Is that your idea of adult and mature?

The modem problem wasn't solved by ham radio operators working in a hobby setting. The few hams who may have been involved weren't acting as amateurs, for darn sure.

Anyone who slams n his brakes after the detector goes off is probably caught already anyway, out on the open road.

It still seems to me that he is suggesting that it is better that we make the decisions for ourselves.

I don't know whether the FCC assigns amateur radio rulemaking recommendations to a team or just to one individual. If it is generally assigned to him, his statements were pretty accurate.

You seem to feel otherwise; what can you tell us about the internal workings of the FCC to shed light on why you feel the way you do?

>And then should be subjected to the NPRM process. Unless there's been a
>change?

Well, of course. Did you really think there was a change? Do you think that Cross is not aware that amateur radio rules changes go through a rulemaking process? I think he was and he was telling us that his views would be of significant staff input to the end result. He, like I, believes that any solution imposed by any one of us would not be ideal for many others of us. Frankly, I can't see why you disagree with that.

Yes, they still do go through an NPRM.

>   On what occassion has "one" individual made policy of such sweeping
>nature?

I can think of one example where I worked closely with the FCC for over a year -- the RF-safety rules. Bob Cleveland, assisted by Jerry Ulcek, generated all of the recommendations to the Commissioners. They did, of course, read and consider all of the comments regarding the various rulemaking procedures.

>   I understand the context of his comments, Ed. I am wondering WHAT
>prompted him to make some comments about any one person (or the FCC as an
>entity) arbitrarily making any new bands plans, regulations, etc.

Perhaps if something as far-reaching as the RF-exposure rules requires two FCC staffers, something as limited as rules changes for the Amateur Radio Service can be done with only one individual. I don't know. I can only presume that you do know enough about this to feel it warranted to criticize Cross. Can you share your inside knowledge with us?

>   I am real, Ed. I wasn't the one who made the comment.about him being
>"appointed by the people".

The way it works, Steve, is that he is accountable to the people through the fact that the President appoints Commissioners and Congress approves them. The Commisioners then assign their duties to various FCC staff. I personally think that this is a reasonably efficient way to manage a government and still maintain accountability "to the people." If you feel that each FCC staff person should be appointed by Congress, or elected by a direct vote of the US public, you should suggest it to your Congressfolk.

>   Perhaps. So far I haven't seen any "petty squabbles" on thier desk. A
>few silly ideas ("Colt", for one....), but other than the Amateur Community
>asking the FCC to enforce it's own regulations, what squabbles to you refer?

If you go back over the decades, Steve, there have been no small number of petitions for rulemaking that I could characterize that way.

I agree with you completely that asking the FCC to enforce the existing rules is not petty. By his comments, Cross appears to agree. Powell certainly does.

>>If he tried to keep that secret, you would damn him, but
>>when he discusses that candidly, you damn him, too.

>   Only when that discussion comes in the form of a "don't make me mad or I
>will make you sorry" tone, Ed. You are right, otherwise.

Try reading it "don't make the Commission mad" instead of taking it personally. I don't think that Cross feels his views would hold sway against the wishes of his bosses, so I think my interpretation makes a lot more sense.

> It's his JOB to answer the questions, complaints and comments of the public.

>It just sounds to me like he may be looking to lighten his workload through
> some carefully worded "suggestions" that if he continues to RECEIVE those
>questions, complaints and coments, he might be tempted to convince the
> Commission to help him out.

He might be, but it is also his job to make recommendations to the Commision, not just to respond to things generated outside the Commission. And as to it being his job to answer questions, I agree, but we don't know what his other duties are and how his boss feels about the amount of time he needs to spend on doing so. Do you?

I do know that OOK CW would be illegal on 11 meters. I don't recall whether Morse code is in and of itself illegal.

However, the 11-meter band is also allocated to Part 15 devices and most of the devices you describe are probably FCC Certificated under Part 15, where Morse (CW or audio modulated) would be legal between Part 15 devices. These Part 15 transmitter are not supposed to be used to communicate with Part 95 operators, however, if memory serves.

An audio tone sent over an SSB transmitter is one way to generate a continuous wave.   The Harris transmitters at W1AW generate OOK CW that way.

The one I tested in the Lab didn't contain such a provision, nor was it Certificated under the FCC rules. Which magazine, if you know? I am working my way through some of the un-Certificated devices that can operate on the ham bands that are being marketed to the general public and knowing where to look for that one would help.

>from the handbook and plug in some numbers which are to your liking.

So you believe that the simple algebra question should be the following?:

XsubL = 2 * pi * F * L

I think it would be a bit too simple to ask that people solve the following for X:

X = 2 * 3.14 * 1000000 * .001 to get XsubL for a 1 mH inductor at 1 MHz.

That looks more like a grammar-school arithmetic problem than an algebra problem to me.

No, we're NOT in agreement. When virtually every ham HF transciever comes with two modes built in, SSB and CW, and while CW enjoys a considerable s/n advantage over SSB, there is alway a very real possibility that CW will need to be used in emergencies, rare though they are. Only a small percentage of hams have digital communications equipment. There were TWO accounts of CW being used to handle hurricane traffic in the past couple years when conditions deteriorated below SSB minimums, but you continue to glossover them. Wonder why that is?

I bought my first commercial solid state digital communications terminal way back in the 70's if memory serves. It was known as a Microlog AIR-One, and it plugged into the rear of a Commodore VIC-20 computer which had all of *20K* of RAM. The thing worked fantastically well. Not that much Later I gave it to an OT retiree friend when I upgraded to a AEA PK64, which plugged into my new Commodore 64, which had all of 64 K RAM. Ilve been waiting every since for some vendor to mass produce a HF transciever with some variety of digital communications packabe bjuilt in, so that one can just plug in a keyboard , select a digital mode of the several offered, as opposed to either SSB or CW (which would still be carried as options, too) and go to work. A super computer, by any resonable standard, can be bought today for a virtual pittance. I own a 566 MHZ Pentium that cost less than a Commodore 64 did in its heyday. So why is it that no vendor has ever made a real attempt to do something like a PK64 style modem into a ham radio? Yes, I'm aware of Patcom and their offerings. Why doesn't the mainstream follow suit with something far better? Could it be that their marketing surveys show that hams just want to yak into a microphone or maybe key some CW? Actually if something suitable was offered at anything like reasonable cost I would already own one. But as it is, I just don't like the idea of hooking my super Pentium to my radio just to use it as a modem, when the radio could very easily have been designed with the modem built inside. I'd far rather have a multimode modem built in than to have a DSP filter. Of course there would be no reason one couldn't easilhy have both, with the computing hardware field at its current level of maturity, and low cost level. Evidently it is not to be.

I read all sorts of drivel posted here by the selfserving who pretend to want it that way, too, and who claim expertise in designing same, but so far -decades later- the situation still remains as always - virtually all HF ham rigs incorporate only SSB and CW, with FC in some as a minor addon. I wonder why that is? Could it be that manufacturers perceive that

> > Thus, it makes sense to just ignore the emergency communications potential of
> >ham radio.   We see.
>
> No, "we" don't see, Dick. I think that ignoring the fact that there are better
> ways to ensure emergency communications capability than testing hams for Morse
> code is the real ignoring taking place.

So lets spend the next twenty some years preaching theoretical high tech and bitching about CW while all new rigs continue to come out with SSB and CW and no digital capability.

I used a radar detector as a microwave oven leakage detector. Works.

Actually, Dick, I do not usually read the accounts of emergency communications. That is why I have been asking for examples for months on this forum. So you knew about the examples, didn't mention them, and are accusing me of glossing them over? How odd.

In that time frame, how many accounts were there of emergency communications using other modes? Please don't gloss over that one like you did the CW ones; you are obviously counting and it would save us all a lot of time if you would answer the question promptly.

What ARE you talking about here, Dick? Most new rigs we test in the Lab have digital capability of some sort.

One of the strengths of the Amateur Radio Service has always been that it has attracted some of the "professional" people. This "promise" isn't something new, Dick; it has been happening to the extent that Amateur Radio has been relevant to the technology these people worked with.

I hope it ever remains so.

My contention was that persons who have never attempted to learn Morse code almost always don't know how to send characters without some amount of training and a little practice. So they can't be expected to just sit down with a lookup table and send messages from a point of zero training and experience. You have ridiculed this fact and it is a fact, based on some personal experience at training those totally inexperienced people. Some have a very easy time of basic code learning, others don't. But most don't do a passable job of sending with no training whatever. No experiment will "prove" anything otherwise as far as I'm concerned. I learned this from hands-on experience.

We know huw much you despise all hams who know that CW is in fact real communications, but you are simply wrong. When virtually all HF transcievers sold today still incorporate two modes, SSB voice and CW, there is a very real liklihood that CW will be needed in emergency situations when conditions deteriorate below SSB minimums. There were at least two cases quoted here in the past couple years of just this situation occuring during hurricanes. You and the other codebasbing high-tech freaks who are all talk and no action prefer to ignore them, but they are there nevertheless.

Makes two of us, Ed. There have been any number of 'dirty tricks' developed
(some were found not to work too well which has its own value) on the ham
bands that found their way into commercial circuitry. With any luck, some
of them will be the digital phone your group is playing with.

Hansl:

Hmmm. No technical descriptions of modes to be used? No
rules regarding repeaters, space operation, third-party traffic
with foreign countries, etc? Seems like you're leaving out
quite a bit of important stuff. However, keeping the CB'ers out
of our hair is a nice touch -- let's see if they can throw that into
any future version of Part 97!

Hello Reginald,

I think you've filled in the missing word. The point was their disgust with the subject. It would probably have been more appropriate to name the thread "Disgusting Development." But Puke was more the emotional response.

Dick, you're the one who needs to pay attention here. I was responding to a message from Larry about people stranded on a remote enclave. You responded to a message posted in reply to something I said in response to Larry's message. And I responded to your message, still discussing the remote enclave (it was mentioned several times in the very text quoted in your reply).

And now, in the same reply where you quoted my comments about the remote enclave, you suddenly claim the discussion is about Jim and something about backpacks in the woods. Perhaps if you spent less time thinking of ways to be rude, you might notice what the discussion you're involved in is actually about.

Have you worked in law enforcement? That is exactly what they do. After about a month or so of the fake radar, they simply place a real cop there to catch local speeders (and he usually hands out a amazing number of tickets).

At a place I lived a few years ago, the favorite speed trap parking spot was right across from my driveway. About three or four times a week, there was a cop with a radar parked there. Of course, they never caught me since I was always slowing down to pull into my driveway. However, I did see those cops write a lot of tickets each week. What was even more amazing though was the number of tickets they didn't write. I routinely saw speeders they didn't go after for some reason.

After that experience, and my experience with various vehicles over the years, I'm convinced, like most other people, that officers will

go after certain drivers, and certain vehicles, much quicker than
others. The fast looking car is an open invitation, while the
conservative car (van, conservative SUV, family car, etc) is usually
ignored no matter how fast it is going. And most motorcycles really
should come with a built-in ticket deposit slot.

Was that false reading as intentionally created as using one of the
"radar-detector testers" at highway speed?

>You seem to feel otherwise; what can you tell us about the internal workings
>of
>the FCC to shed light on why you feel the way you do?

It has nothing to do with "the internal workings of the FCC", Ed. It has to do with a singular event in which an FCC staffer made some leading comments.

>He, like I, believes that any solution imposed by any one of us would >not be ideal for many others of us. Frankly, I can't see why you >disagree with that.

I believe in the "least common denominator" course of action too, Ed. I just don't like the idea of someone whose wages I pay telling me we had better do it "his" way, or we might be sorry.

The fact of the matter is that Amateur Radio, personified by the ARRL, has done a good job of trying to make sure that it DOES do things "on autopilot", and that's as it should be. The FCC should be proactive as a last resort or to simply to put the stamp of officialdom on a matter where such action is required.

But in that process, the FCC should (such as in repeater coordination matters), state that they consider such "mutual" band plans (or what ever convention you care to interject here) as "Good Amateur Practice" and that operating contrary to that convention is NOT "Good Amateur Practice" and may subject the operator to fines or sanctions.

And after some established program to obtain that operators compliance on a voluntary basis has passed, the FCC should be expected to enforce the laws.

What >>I<< can't see is why YOU find it objectionable to expect a federal employee to do his job without insinuating threats against Amateur radio as a whole.

If everyone obeyed the rules without being licensed, there would be no need for the existence of a license. This applies to lots of things besides ham radio.

In article <20010527100045.28933.00001754@ng-ci1.aol.com>, Steve Robeson LPN says...

> I just don't like the idea of someone whose wages I pay telling
> me we had better do it "his" way, or we might be sorry.

But of course that is almost exactly OPPOSITE of what he said. Rather than do it >his< way, he said, in effect, "You guys figure out >your< way to play, and don't expect the FCC to provide detailed regulation in the future."

"Detailed regulation of the nitty gritty of communication services, including the Amateur Service, is not in the picture," Cross said.

"I hope that those of you who are thinking about asking us to carve up a band by fiat will think again,"

"You really should think hard as to whether you want or need federal rules 24 hours a day, seven days a week, to apply everywhere the FCC regulates communications,"

"What we don't want--and we don't have the resources to do--is multiple proceedings that address piecemeal changes in operating privileges for only certain classes of licensees or certain bands," Cross declared. "You, collectively, need to reach agreement on how you want to use your spectrum."

Hardly "do it my way, or you'll be sorry"!

By the way, I wrote a whimsical "simplification" of Part 97 (copy below). A friend of mine sent a copy to Riley Hollingsworth. Riley responded:

What does this have to do with Morse code testing? Without Morse code testing, hams will still be free to use CW or any other mode for emergency communications.

> Our civil defense motto is, "It's not IF a disaster will happen,
> but rather WHEN."

What does this statement have to do with Morse code testing?

Sure, that's what tape recorders are for. We did it all the time
while practicing emergency communications at Intel. Intel was
so dissatisfied with CW throughput that they wouldn't even
authorize CW for emergency communications.

Get real, Dick. Intel spent a fortune on amateur radio equipment so they
wouldn't be limited to the throughput of CW. Intel sprung for 70 ft towers,
beams, and legal limit amps in order to get emergency voice communications
so reliable that messages could be taped at 200 wpm and transcribed by
secretaries. In the event of an emergency, Intel will have lots of
emergency traffic to be passed. CW just wouldn't hack it. It was a choice
between SSB using one ham rig or CW using ten ham rigs. SSB won.

You bring up a very interesting point above, Dick. And it's one that made me think back and reflect on the issue of the Restructuring debate that has been and is taking place. You are in defense, above, of "those of us who passed a code test among all the other requirements in effect at the time of our licensing" and the people you feel are ridiculing you.

I can remember when the Restructuring debate was taking place on the air around here. Most who had been licensed in the past few years--and many who are/were Tech+ at the time--were merely discussing the topic and how we felt about it. I think you would have found the preponderence of opinion among that group to be that we thought it was a good idea for the hobby.

As I recall, the "older/longer" licensed hams would come in to the conversation with comments about how we were "lite" hams, hams who did not count as real hams, hams who would never be among the ranks of real hams, etc. I really don't remember any of us who were new licensees being all that fired up about name-calling, and insulting the older hams--even after that onslaught of disrespect.

So, I was trying to remember a lot of the posts on this NG from back then. Maybe I'm wrong, but I don't think so. I think the offense was on behalf of the "older/longer" licensed hams, and those of us who are "newer/shorter" licensees followed by example and became very defensive about it. And, there were those who came into the middle of the posts and just took off with whatever they delighted in--mostly just being assholes.

> to themselves.
>

I'd like to set the record straight, since I may never have done that, and help you to realize some of the misperceptions that become obvious in the above statements. I am speaking for myself, of course, but I think you'd find that most of us "newer/shorter" licensees would express the same sentiment:

1. I respect the fact that many of my fellow hams were licensed under much more rigorous standards;
2. I don't think I have ever had a bad feeling toward "older/longer" licensed hams about their having passed higher speed CW tests than me to have gotten their license. Quite the contrary, I admire their perserverence;
3. I don't think I have ever singled out any particular licensing phase a ham went through and deemed whether it was more or less important than what I or anyone else went through;
4. I hope no one has ever gotten the idea that I "disrespect" someone because of their affiliation with a particular mode of operation on ham radio, because that is not the case.

What I do get upset about is being judged by any other ham, or person for that matter, to be greater or lesser than they just because I got somewhere differently than they did. Do we not deserve the freedom we have in this country because we did not "work for it" the way our forefathers did? Are we lesser beings because we have not "worked for the right" to be humans the way our ancestors did? No. Am I a lesser ham because I did not pass a higher speed CW test than someone else? No. And it would be silly to base someone's worthiness to be a ham on just one of many, many modes that are available in our hobby. There are even those hams who really don't even operate on the air all that much at all--but they sure have helped in other ways such as experimentation, politics, new equipment, etc.

Is it possible, Dick--and others (on both sides of the debate), that you've
been so wrapped up in your hate for so long, that you've forgotten ham radio
altogether?

Their trucks do tend to be smaller, but that probably has more to do with the much smaller roads carved into the old cities (many of the roads in those cities were built centuries before cars). As for enforcement, they tend to heavily depend on traffic cameras. Again, they don't want to disrupt the flow of traffic by pulling people over on the Autobahn, so they simply take a picture and mail you a ticket. The same with traffic in the city - many stop lights have cameras overlooking traffic through the intersection. While I never got a ticket for speeding on the Autobahn, I did get a couple of tickets after getting trapped in an intersection during a traffic jam in town.

> Note that their fuel takes are much higher
> than ours, so that the money is there to
> mainatain the roads.

Actually, that had us confused for years. The roads were well maintained, but we almost never saw road construction. We would see road construction for big projects (new bridges, etc), but almost never the minor maintenance (resurfacing, painting, etc). As far as we could tell, they seem to do it at night, sometimes completely doing a whole stretch of road in one night. For example, we saw them getting ready to do a road on the other side of town one afternoon. Three days later, when we drove through there again, the road was completely resurfaced and there was no sign of any recent road construction (no equipment, no signs, etc).

> Excellent idea. I have heard that in Sweden
> (where Volvso are made) you have to meet
> certain qualifications to OWN a car. If you
> can't show that you will maintain the
> vehicle, you can't have one.

That is pretty standard throughout Europe now. You also cannot modify a car in a manner that will change it's design characteristics. For example, if said car is sold with "x" brand of tires on it, you have to install the same brand of tires on it, or an approved replacement, when those tires wear out. You also cannot install wider tires, smaller tires, bigger tires, or so forth. Likewise, you cannot install anything on the car itself that will change it's behavior (spoilers, custom body parts, etc) unless those items have been approved for that specific vehicle. It is a more rigid system, but I guess that is to be expected considering the speeds allowed there.

> Gotta define "aggressive", though. For example,
> you can't be indecisive about merging into
> Autobahn traffic, from your description.

It is true about merging into Autobahn traffic. My wife was a little slow when she entered the Autobahn the first time (she has always been afraid to drive fast) and a truck had to apply his brakes (which caused a couple of other trucks to apply their brakes). I thought the driver of that truck was going to have a heart attack because of all the yelling he was doing through the windshield. Anyway, we got a letter a few days later from the police politely reminding us to be more careful when entering and leaving the AutoBahn.

As for aggressive, I mean aggressive. If there is even a tiny opening, a car will turn in front of you from a side road (darn gas pedal pressed to the floor). Likewise, at intersections, if you hesitate to go when you're supposed to (making a left turn, for example), nobody is going to sit there and wait for you. They will simply proceed into the intersection and, when you finally get up the nerve to go, you will have to proceed into the intersection until others stop again.

And it is amazing to see drivers on the smaller roads in town. Because of parked cars, it is not uncommon to find only enough room for one car at a time to proceed. In every case, it is almost like a game of chicken - each proceeds until one finally pulls over to allow the other to go. And, if you are the one who stops, you had better be aggressive if you want to proceed again, because every other car will follow that first one through.

To be perfectly honest with you, it is absolutely amazing there isn't more accidents. When you're driving there, it is almost like driving in a demolition derby, with the rules changed to give points to those who drive the most aggressive without actually hitting another vehicle. Add in bicycles, motorized wheelchairs in the roadway, mopeds, streetcars down the center of most roads, and so forth, and it is definitely a different driving experience.

I will add one more thing at this point, the cops in Germany are a lot more friendly then the typical cop is here. In the ten years I was there, I had numerous conversations with various police officers. And, in every case, they were extremely open and friendly (often sharing personal information about their life outside of law enforcement). In fact, one motorcycle cop even tried to talk me into becoming a cop simply because I was riding a motorcycle that afternoon (he thought I would pass the motorcycle cop requirements easily).

On another occasion (an event that stands out in my mind), I saw two police officers approach a street vender selling mistletoe just before christmas to ask him if he had a license. When the person responded that he didn't, I watched carefully, half expecting the police to run the guy off. Instead, they explained the law to him, told him to have a license next year if he planned to sell there again, and then both officers bought some mistletoe from him. I could not help but smile as I watched both stroll off with mistletoe hanging out of their shirt pockets. Christmas in Germany, with snow covered castles, old buildings, and the smells of baked christmas breads, is really special.

We had a situation quite a few years ago where a well-known
troublemaker (who was a licensed ham) set himself up at the edge of
the road in khaki work clothes and a white jeep and was pointing a
radar gun at passing motorists. The Highway Patrol nabbed him and
called us in. We measured the frequency of the radar gun and found
that he had tuned it to be several kHz INSIDE the 2400 MHz ham band
and that he would key it on and off with his call sign in Morse
every 10 minutes (yeah, sure!!)

No violation....but what a nut!!

And who, pray tell, do you think summarizes, analyzes, and
recommends the course of action to the Five Tubeless Tyres on such
NPRM/R&Os ?

>The "tone" I take from his comments was "shut up". Perhaps he didn't
>mean it that way, but that's what I got from it.

You missed the boat on that one.

Good for Bill that he had the guts to tell us, the amateur community,
to get our own act together on what we want before we ask the FCC to
change anything, or else the FCC is quite capable and liable to come
up with something that we wouldn't like.

What he is telling us is no different from what his predecessors in
that position used to say, only clearer.

>that WAS what he meant, he needs a reality check and a reminder who's
>financing his mortgage.

A) It wasn't what he meant and

B) The "who's financing his mortgage" stuff belongs where the sun doesn't shine.

I put up with that crap for 30 years from folks who thought that they knew my job better than I did and could do it better than I did. It gets old real fast. Pure QRM.

He works for The Federal Communications Commission, which is the agency charged by The Congress with regulating YOUR use of radio, and his job is to recommend and/or make decisions according to the guidelines of that agency, not according to what you think those decisions should be.

Cecil, part of the entire premise of Amateur Radio as a communications medium is tat it can be done ad hoc without having to spend that "fortune" and have secretaries avaialble for transcription. Formal messaging will, by its nature, be done slowly in the Amateur Radio Service. It is the less formal part of emergency communications that will be done at normal conversational speeds; in that case, the voice modes have it all over CW, both in terms of throughput and in terms of power consumption-per-datum, as it were.

>CW just wouldn't hack it. It was a choice between SSB using one ham rig or CW
>using ten ham rigs. SSB won.

Under those circumstances, it would have. Under most circumstances in the Amateur Radio Service it does, too, but that does not mean that CW does not have value under emergency conditions. Under differing circumstances, each of several modes is "ideal" for emergency communications.

How would someone driving at anything like a resonable parking lot speed run over a pedestrian in a parking lot because their radar detector went off?

Good luck with that one!

>A little bit of political algebra, Phil? A=B B=C, therefore A=C..?!?!

If that was a question, from what I remember from Algebra in school, if A=B and B=C then A does indeed equal C. I don't think that I have ever seen anyone else define that equality as "political."

But I'll bite. Do you think the chain of authority that Phil describes doesn't exist? If you think it exists, but is incorrect, can you propose a better way for Congress to maintain oversight of the tens of thousands of federal employees other than by a chain of command?

>more rigorous standards;

Some may have been, Kim, but I wasn't. I gained my Novice priveleges by studying a 4-page license manual section and all Amateur priveleges by studying a 16-page chapter in the manual. The code speed that got me all Amateur priveleges was 13 wpm, so that was more rigorous than the present 5 wpm requirement.

Leaving out the ARRL part, that is exactly what Cross said in his speech.

>   But in that process, the FCC should (such as in repeater coordination
>matters), state that they consider such "mutual" band plans (or what ever
>convention you care to interject here) as "Good Amateur Practice" and that
>operating contrary to that convention is NOT "Good Amateur Practice" and may

The Commission was asked to do and they declined. To stick with this example, Cross said that if he were asked to make a decision about that, not everyone in the Amateur Radio Service would like that decision. What he didn't do was to go on to explain that that decision -- if he were asked -- would be a staff recommendation to the Commission, etc. I guess he just didn't envision that anyone would take his words that essentially said "Amateur Radio is better off resolving its own problems" to mean "Do it my way or else."

>   What >>I<< can't see is why YOU find it objectionable to expect a federal
>employee to do his job without insinuating threats against Amateur radio as a
>whole.

Would you prefer that FCC staff never give anyone a heads up on these sorts of things?

This kind of thing is not really new. In 1969 I became interested in ham radio and tried to find someone in my area to give me the Technician test, which was given by a volunteer examiner and not the FCC. I knew about two hams - one lived near me and I had spotted his antennas, and the other ran an electronics repair business in the small town where I lived. When I contacted them, they both said pretty much the same thing: "Why don't you keep studying until you can pass the 13 wpm code test and General theory before the FCC, after all, Novices and Technicians aren't 'real' hams because those theory tests and 5 wpm code tests are too easy."

I finally found a local Technician who referred me to a high school science teacher at a school a few miles away who was happy to help, and became WA3TGR. I have tried to help others enter the hobby but understand that Elmering is not for everyone. I remember that the advent of 2 meter FM and the popularity of CB in the early 1970s brought many new hams to the hobby who weren't always welcomed with open arms.

If you say so, Ed. Have you seen an amateur exam where the examinee is provided the formula? The formulae are normally provided in the study material.

Not necessarily, Phil. The combat control teams in Vietnam wore blue
berets. Their job was to travel to those typically unsecured airfields
without control towers and bring in 834th Air Division C-130s and
C-123s all day. Usually they arrived in a jeep carried in the first
C-130 and departed on the aircraft making the last sortie of the
day--unless the weather turned bad and they had to overnight.
When not on missions, they typically ran five miles per day beginning at
O-dark-thirty.

The Omaha (home of Stratcom)  Nuclear Survival Kit:

1) one ladder
2) one small pillow
3) one's favorite book
4) one quart excellent Scotch

When the sirens go off, use ladder to take rest to roof.  Park butt on
pillow, read book, drink Scotch.  If it is for real, you will be vaporized,
if a false alarm you will kill yourself falling off the roof.  In either
case, you die happy.

Dick N�BK

BTW the only 'duck and cover' drill I have ever experienced was on the
History Channel.  Our school super thought the whole thing was meadow
muffins and never ran the drill.

Actually, in every algebra I know, where = is defined as "equality", if A=B and B=C, then A=C. And I know a couple of different algebras.....

The "wages" of the FCC are paid by the American people as a whole. The various radio services are really special interest groups, seeking to use public property. That's why they are called "licenses" and "operating privileges", not "rights".

I think what FCC is saying is really quite simple: "Follow these simple rules, have fun, and DON'T BUG US WITH THE SMALL STUFF!!"

This is nothing new. Anybody remember the Eye Bank Net?

 Uh, yes they do. And just what mode is "FSK"? On all my gear that's not
a  mode at all, rather a means of shifting the signal frequency
according to the dictates of some external communications TNC. You ca
n't key it with a key, nor modulate it with a microphone. Got to have a
terminal controller that would be very easy to build into any HF rig
itself. But no- there is no market for it. HAms do not ask that of
manufacturers and they don't offer it.
 I would have thought you'd know that. Maybe if you weren't so
cloistered you would know some of these things.

Unanswerable questions asked only to show that there is no answer do
not deserve an atttempt. I'm not in charge of keeping score. Since you
are a part of the HQ staff it would be far more likely that you could
get all the facts for yourself if you were intererested in something
other than suppressing me.

(Just applying the same standards to the discussion

No, you apply whatever standard you think will make a point against me,
swhther or not it is valid. Score means everything.

If you can't name them your answer is without merit.

I'd wager I have owned more than twice the number of commercial rigs that you have. NOT ONE has ever had a TNC built into it, and it is the same today. I presently own four commercial HF transcievers and none has anything other than the capability of being FSK keyed, and I would point out that FSK is NOT a mode,rather a capability of being frequency shift keyed by another box.

I was on the verge of buying a new Ten Tec Pegasus, but dropped the idea when I learned it would take *two* computers to use it on the air on a digital mode. Nonsense.

Bullshit, Ed.
And you don't find it on this NG either. You DO find responses to those
-almost none of which are newcomers, by the way, who profess to have the
best interests of ham radio in mind but have squatted on the sidelines
some for a lifetime, waiting for the test requirements to dumb down to
their level. Meanwhile the FCC and you folks at HQ willingly accomodate
them.

Nope, I agree that group is virtually infinite, Ed.

And of course, you would never, never engage in such an act.

I didn't say it did, Ed. I am relating my experience at Intel. Intel refused to spring for $15,000 per site for 10-20wpm CW. Where they said I could put CW cannot be repeated here.

The productivity of US engineers has increased magnitudes by the use
of calculators and computers.

Your methods may work for teaching but be sure to tell your students, that
in the real world, they will get fired for such nonsense.

Yup, you need to get out more. All you need to, Dick, is take a look at the
Product Reviews and you can pretty easily figure out which rigs have RTTY modes
included as a standard operating feature.

If you don't care to do so, please don't expect me to do it for you.

> I would point out that FSK is NOT a mode,rather a capability of being
> frequency shift keyed by another box.

Several of today's rigs have a built in FSK feature, Dick. FSK is as much an
operating mode as OOK CW.

What if it was within a ham band and he called CQ on CW?

That refers to tone signaling, such as to unmute someone's tone
squelch. My Heath GW-42 CB xcvr from the mid-60s had such a tone
encoder/decoder circuit in it (used a resonant reed relay).

That doesn't seem as far-fetched as someone dying on the Interstate.

>Steve Robeson LPN asked Hans to prove...
>> ..... that Jeff obtained the call fraudulently...?!?!

>Fraudulently? That's your word Gunny, not mine.

Your word, Hans, was "spoofed." According to my Oxford, that resolves to "hoax," which refers to "deception," which mentions "cheat," which finally references "fraud."

But for the record, I obtained that KH2 callsign legally after a short stay at UoG in Guam. Upon my return to Hawaii I kept the Guam callsign, just as a lot of the Guam transplants do here; I know of three. When you change residence within Call Area 13 (Pacific islands), you don't have to surrender your old KH# callsign. Remember, Area 13 consists of the subareas KH0 through KH9.

What probably bothers you is that one reason for my Guam trip was to get rid of my NH6IL callsign; if so, fair enough.

Let's not forget a certain TX ham on here who has a call of W6RCA. Spoof? Nope.

KH6O

These guys know that no current nor past commonly produced ham rig will
work any digital mode without an external digital controller. They are
just blowing smoke up each others tailpipes.

You seem to have no idea about the microcontroller world, Dick. I was Staff Applications Engineer for the 80C51 and 80C196 lines of Intel microcontrollers. I've built lots of black box controllers for a multitude of applications. One of them was an 80C51 interfaced to an EXAR FSK modem chip, a 20 character LCD display, and a keyboard. You see, Intel paid me good money to develop applications and write an Application Note about them. It was a ham's dream come true. My Dad once said, "You mean they pay you for the same thing you do when you go home and have fun?" I said, "Not only do they pay me to have fun, they pay me a six digit salary to have fun."

Do you not believe that an Intel Microcontroller Application Engineer couldn't figure out how to interface an EXAR modem chip to achieve RTTY operation without a PC? The nice thing was, as an Intel engineer, I could request free sample chips from almost all other manufacturers.

My design worked very well but I simply didn't like RTTY. I like CW a lot better. But that's just a personal preference, not a good enough reason to saddle all HF hams with an affirmative action program for Morse code.
--
cheers, Cecil

Yep. They do say RTTY on a mode position. So try to work RTTY on one
out of the box, you clown.

>Good luck to your niece!

Thanks Jeffrey,

It's pretty fun to watch. While I'm "learning" the code, she actually appears to be "absorbing" it. I suppose that's why kids pick up languages at such a young age without much (overt) effort. Thanks again for the kind words.

No I'm "admitting" that both you and Cecil are full of bullhockey and
you both know that working RTTY with any commercial HF rig is
im[possible without an outboard modem. Soaking your head doesn't even
help. Maybe a judiclous application of the Wouff Hong is in order, with
the Rettysnitch held in reserve.

I think that it would be allowed as long as it is a part of a voice
transmission, as following speech and followed by same. That isn't MCW
by exact definition, as audio into a microphone instead of a hardwired
tone oscillator feeding the transmitter direct. I know, the result is
the same. The process is not.

Bullshit, Ed.

And you don't find it on this NG either. You DO find responses to those -almost none of which are newcomers, by the way, who profess to have the best interests of ham radio in mind but have squatted on the sidelines some for a lifetime, waiting for the test requirements to dumb down to their level. Meanwhile the FCC and you folks at HQ willingly accomodate them.

Ah, I see. You didn't *need* to soak your head, you were already one
who issues the insults while masquerading as a defender of ham radio but
in a most one sided way and dishonest way.

True Dieter. BTW, in re. to this being more appropriate in rec.rado.cb, I put
it there...and they did NOT disappoint me. The one good reply came via e-mail
from a fellow ham. Although I'm an ardent supporter of 11 meter activities,
rec.radio.cb no longer isn't a true reflection of the amity I've found on the

band. Happily, in my niece, it will have helped spark another interested soul
to aspire to the ham bands. I find the fact that nobody's insulted anybody else
in this thread most encouraging.

You can try to ignore it into infinity, but it won't ehlp. They are there, and here inside the ARS by the thousands. Of course Riley can't issue them citations, they don't use callsigns when doing their dastardly acts. That you expect it to be otherwise is even yet more revealing of your mindset.

Yep, and the S/N degrades most seriously as speech speed rises. Enunciation suffers greatly, readibility in poor conditions falls 'way off. I know this subject all too well, and not from ham radio, either.

Richard McCollum:
>"Jeffrey Herman":

>> As I wrote (and you snipped) every section of that arithmetic course is filled, resulting in a waiting list of students who can't get in. A placement exam has to be taken by each new student; the exam places a student into whatever course is appropriate based on his/her background. We have to offer more arithmetic sections than any other course, and as stated above, they all fill every semester. Ten sections are offered each semester, the first beginning at 7:30am.

>Brackets, man, brackets. (y**4)/3 etc. avoids taking y to the 4/3 power.

Not necessary at all. You get a F-, Richard McCollum!

>T'would appear that you have some problems with teaching math in the
>50th
>state but probably no worse than the local U where the Math and Science
>hall
>is 'the building that never sleeps'.

It's obvious that you've forgotten the "Order of Operations":
Exponentiation is performed before division. Remember the acronym
PEMDAS? Note that E(xponentiation) occurs prior to D(ivision)?
Hence y^4/3 unambiguously means exactly:
"y raised to the 4th power, then that result is divided that by 3."
This is exactly the order your calculator will follow, too, when
you enter that term, for its programmed to obey the Order of
Operations, something you've either forgotten or never learned.

You're mistakingly thinking of y^(4/3) -- that's how
"y raised to the 4/3 power" would have to be written, for
P(arentheses) over-ride all the other operations.

I'll give you another chance, Richard McCollum; simplify the following:

-4^2-3*5, remembering the Order of Operations above.

Why do you insist on acting dumb? FSK is NOT a mode, it is a method of modulating a transmitter that requires an encoder/decoder -OUTBOARD on virtually all rigs today as in the past, an external box, an add-on modem that is NOT a part of any mainstream ham rig. And I know that you know it. It is revealing that you keep up this charade. What could you possibly be trying to prove?

Which FSK *mode* does any transicever work-without an encoder/decoder(which is NOT a part of the radio transceiver itself)? 60 WPM RTTY? 100 WPM RTTY? ASCII?
Cheeze.. And I had considered you folks in Newington to be sharp. No more.

So you have just admitted that no HF rig will work RTTY without an
external box, despite your earlier false assertions.

I have, Dick, it worked perfectly. Are you saying that RTTY mode doesn't work right out of the box? How the heck does ICOM manage to disable their RTTY mode until so many days after it is unpacked? So who's the clown?

Outboard modem????? Try a single-chip 80C51 microcontroller, Dick. When
are you going to enter the 21st century? (Actually, the 80C51 was designed
about 25 years ago.)

What's an "addon box"? Is that a design by Addon Industries?

Fortunately, training and legal limit power solves the problem.

No I don't admit my assertions are unsupportable by facts and if you know much of anything about the subject you know as well as I how true they are. If not, well it is more evidence of your lack of knowledge while you profess to be in the know. You've been informed and you choose to ignore it for reasons that are becoming more and more clear-you'd rather just not know.

He claimed that he was testing the transmitter to see if it
operated properly and we couldn't prove otherwise. The CHP took
care of him for interfereing with free flow of traffic, and he
"voluntarily" surrendered the radar gun. Case Closed.

I am not going to reset anything just to read your posts, Cecil!!
Unix/trn margins are set at the standard 80-column width.

Ed:

Use some of your superior computer skills to go back through the thread and re-read it. Now, quit stalling for time with your juvenile tactics and answer my question! Eight-year old kids avoid answering direct questions by doing the same thing you're doing here. If you're getting a bit miffed at being compared to an 8-year old, stop behaving like one and provide simple, direct, truthful answers to the simple, direct, and well-intended questions you have been asked.

I only ask questions for one reason: I don't know the answer, and I believe the person I asked *does.* My asking of the question is based on my faith in that person being able to provide the answer in a straightforward, honest, and informative manner. Stop behaving toward me in the same cynical and disrespectful manner I've come to expect from ARRL HQ staff members. I expect better of you because I consider you to be an intelligent, knowledgeable, and articulate person. Please deliver, or I must re-evaluate my opinion of you and re-align it with my past experiences with your colleagues.

>Not to be funny, but did this really catch anybody "off guard?"

It has seemed perfectly obvious to me for a couple of years not, so no, it didn't take me off guard. The FCC obviously has much bigger fish to fry than the ARS minnow. So, they're telling us to figure out what we want as far as regulation, and they'll rubber stamp it as long as a consensus is achieved. "We've" apparently decided "we" don't want code testing, so, if that's the case, and there is a consensus, they will make it so. Why doesn't the FCC seem to think we've arrived at a consensus on this issue? I've been at the sharp end of the code/no-code (testing) debate for over a decade, and I don't see the Pro-Code Testing Agenda as being the mainstream majority. But why isn't the FCC getting the message? Apply this question to any other amateur radio policy issue, if you like, but if you can come up with an answer, please share it with us!

Ed:

I live less than 4 miles from Dover AFB -- a strategically vital, active
military installation, surely targeted with multiple, high-yield warheads.
I'm toast, man -- burnt toast, at that! Which "moderate sized city"
do you live next to -- Hartford? Do you think the nation's insurance
industry is targeted for destruction by the Russians or the Chinese?
You could very easily survive the "initial blast" of warheads targeted
for New York, Washington, Philadelphia, Dover, Mc Guire AFB, or
Boston -- which are about all the major targets in a 300 mile radius
of where you live. With a bit of luck, you could even escape the
secondary radiation effects merely by staying in a fallout shelter
for the requisite two weeks. I have the right to be indifferent, your
indifference is purely gratuitous.

>Perhaps we could have rules that stipulate that hams who live far enough away
>from urban areas that they might survive whatever creates the EMP to retain
>knowledge of Morse code and to maintain a station capable of operating Morse
>and SSB on HF and FM on VHF for 4 hours without power.

That would be a ridiculous, even childish stipulation. I think the only proper way to proceed is to consider every ham a potential survivor in any given emergency situation, and have them prepared to deal with both the obvious and the unforeseen as far as potential operating conditions are concerned. It could very well be that in some circumstances, Morse/CW is the logical fallback mode. How can it be effectively employed if the knowledge and skill development isn't there?

>> We're NOT discussing the "legality" of that, or any

Don't look now, Ed, but PSK31 varicode isn't something that can be hand-keyed --- but the International Morse Code can! Please spare us your childishly irrelevant arguments.

>
>Now, if you think it should be about effort (again), that is a whole other
>thread. :-)

It's always been about effort, Ed. The effort required to learn the Morse
code at a proficiency level which enables the radio amateur to exploit
the benefits of the CW mode. This debate is about that effort, and the
desire of certain people not to undertake said effort. The "effort factor"
is the underlying principle of the debate. This fact is not admitted to
by the NCTA, but such deceit is a normal part of the liberal psyche.

 Your thinker is undernourished. I too have ridden a motorcycle with and
without a motorcycle qualification. But I recall the first time I ever
got onto a motorcycle. I didn't wreck it, but I could easily understand
how it could happen very easily. And when I took the exam for
motorcycles I understood why the state wanted one to know how to ride
before allowing them out on the highways on one.

Bullshit, Ed. You have this fixation on what you percieve to be somebody bashhing everybody who is a ham radio newcomer. WRONG!!!!!

What is being countered is all the nonsense from those who choose to ridicule those of us who passed a code test among all the other requirements in effect at the time of our licensing. Those idiots are the very ones who sat on their butts and whined the whole time until easy licensing came along, and now they can't stand it that they were too useless to get it on their own, as we did. so they continually complainn about the minimal 5wpmcode reqjuirement as though it was some real obstacle. Piss on them, and all their supporters.

I am sure it was there, but I was fortunate enough
> that the people I met were not the type who felt they had to insult the
> newcomers.
>

If you're afraid someone will chase off some of the more useless examples of humanity who pose as real hams while bashing all CW operators (you're one too, remember) you'll just have to deal with it.
If they are that thin skinned they need to go. They're of no value even to themselves.

If Bill Cross wrote the original issue of the late NPRM I feel sorry for
him.

Huh???? I'm one of those hams, Dick. I encourage all hams to learn Morse
code and enjoy the advantages of CW. The question is: Is CW likely enough
to be useful during emergencies that *ALL* HF hams should be required to
know Morse code? The answer is clearly, not in the year 2001.

> When virtually all HF
> transcievers sold today still incorporate two modes, SSB voice and CW,

What would have been the consequences if CW had not gotten through all
both of those many times?

Is the use of CW once per year for emergencies enough of a reason in your
mind to require 350,000 hams to know Morse code? How many lives would
vehicle helmets save per year? Why aren't you advocating helmets?

The point is that one can be just as good a motorcycle rider without
a license as one can be with a license. The license itself is irrelevant
except for avoiding traffic tickets.

  AFAIK Bill Cross and Monty DePont are "it" in the amateur rulemaking
  business and Monty is about MY age......they also handle CB, MURS,
  and GMRS issues.  The rest of private land mobile is handled by
  Steve Linn in Gettysburg.

  The rest of the professional-level folks in WTB are all relative
  newcomers to the Wonderland of Radio whose main interests lie in
  commercial radiotelephone policy and who-gets-to-win-the-auction
  issues.

  Gone are the days when one became a Bureau Chief (or Commissioner)
  by starting at the bottom and learning the business.

The one I presented is a simply-solved quadratic equation which is presented in any algebra high school course.

1. Multiple both sides by 9 to clear the denominators.

2. Substitute x for y-squared. It's now of the form:
   $3x^2 + 8x + 7 = 0$.

3. Now use the quadratic formula, something every algebra student has to memorize.

Et cetera...

>>Then answer me this: Why do most (if not all) community colleges

>begin college, or just a relative few?

As I wrote (and you snipped) every section of that arithmetic course is filled, resulting in a waiting list of students who can't get in. A placement exam has to be taken by each new student; the exam places a student into whatever course is appropriate based on his/her background. We have to offer more arithmetic sections than any other course, and as stated above, they all fill every semester. Ten sections are offered each semester, the first beginning at 7:30am.

>I think OOK CW then comes off as a loser,

Formal message traffic (also called "ARRL Formatted Traffic", I believe)
is comfortably passed on both phone and cw at 20 wpm; consider that as
the rate at which comparisons between the two modes are made.

That increases cost significantly (three vehicle involved - the truck to train, the train, and the truck from train). Only cost effective if considerable distance is involved.

> > I wasn't talking about the expensive top-of-the-line export models.

> companies.

All of them (BMW, Volvo, Mercedes, etc) have several low end models they don't export, as well as special purpose vehicles that are not exported (all three build large trucks, for example). In fact, Mercedes even has a model that is designed exclusively for use as a taxi (a real clunker compared to their high-end export models). Again, even those low-end models tend to be better designed for high speed driving.

> Questions about the Autobahns when you have time):
>
> - do they allow trucks, or just cars?

Yes, trucks are allowed on the Autobahns. However, unlike here, each lane of an Autobahn has a speed limit. Slower vehicles, such as trucks and smaller cars, are limited to the slower lanes, with the inside lanes reserved for faster vehicles (the last inside lane usually has no speed limit or one so high that only a jet aircraft could exceed it).

> - is there really no speed limit?

Opps, explained that in the last paragraph. Once you get further outside the built-up areas around towns, most of the Autobahns are two lanes just like we have here. However, unlike here, a vehicle is required to immediately move into the right lane if a faster car approaches from the rear (the vehicle approaching will flash his lights to signal for you to move over). And that includes a passing situation. If you are passing, and you cannot complete the pass without slowing down vehicles in the faster lane, you must return to the slower lane and wait to pass when you can do so without interfering with drivers in the faster lanes.

Flow of traffic is a big thing there. For example, in addition to the passing example above, a vehicle cannot hinder the flow of traffic when entering or exiting the Autobahn either. You must merge with traffic without slowing down other vehicles on the Autobahn, or vehicles on the entrance ramp behind you.

> - how well are they maintained?

Autobahns are better maintained than our freeways. In fact, some are so smooth, they can be used to land aircraft (which was exactly the plan during the cold war - using Autobahns for runways if major airports were destroyed in a war with the Soviets). Of course, lesser Autobahns are not that perfect, but I don't ever remember seeing a pothole or overly rough surface.

> - how good are German drivers compared to Americans?

They are generally better trained. For example, everyone must complete a driver's training program (at their own expense), with several hours of supervised driving, before they're allowed to get a driver license.

Of course, in spite of the training, they are much more aggressive drivers, especially for the small roads often found in older towns. It is not that bad once you realize that the other driver is going to be aggressive and you respond accordingly. Likewise, though, he expects you to drive aggressively and it does cause problems occasionally when the foreigner doesn't drive as expected (strange, yes, but other drivers get mad if you don't drive aggressively instead of the other way around).

One other thing is different also. Everything is not allowed unless it is specifically allowed. For example, here in the U.S., we can make a U-turn any place we want unless there is a sign that says we can't. In Germany, you cannot make a U-turn unless there is a sign that allows it. The same with most other traffic flow situations (left turns, etc).

It is a different system, but not all that different. Most American drivers adapt rather quickly to the way things are done. In fact, if you talk to those who have spent some time driving there, most will tell you they had a harder time adapting back to the way we do things here. This is especially true for the speed limits. The 55 mph, or even 75 mph, speed limit seems really slow after you have driven for a couple of years at 90+ mph (I had a Citroen BX-19GT and never drove any distance under 110 mph). Needless to say, I got a few speeding tickets in the months following my return (I never even looked for cops writing speeding tickets in Germany, so was out of practice).

The last hurricane that passed through the islands devastated Kauai
County; 80% of all structures were either destroyed or damaged. The
only communication method which existed between that island and the
outside world was amateur radio; traffic concerning required rescue
and hospital equipment, health and welfare messages -- all passed
by hams stationed in both the Kauai Mayor's office and here on
Oahu in the Governor's office.

Of course I disagree with you! "WHY" indeed! Why do they do it in the
first place when they could easily become hams and NOT do it? Why should
they be satisfied to follow rules and conventions just because they now

have gone through a licensing process for ham radio? When doing their
rulebreaking thing they wear their other hat and don't use a callsign,
of course.
Are you really so cloistered there at HQ that you don't know any of
this???

Bullhockey. Any reference to CW use is routinely ignored by you who have an Agenda to discontinue it as a vital mode within ham radio.

 You seem to have it mostly backwards again, Ed. Few accomplished
technical people who didn't learn via ham radio seem interested in
taking up the hobby once they are well established in their careers. On
the other hand, many who became hams in early life go on to become
engineers and scientists, and use both their advanced knowledge and
interest in ham radio to invent many good things.
 Most of those who have already reached that stage find ham radio to be
too mundane and trivial for their tastes.

Brackets, man, brackets. (y**4)/3 etc. avoids taking y to the 4/3 power.

T'would appear that you have some problems with teaching math in the 50th state but probably no worse than the local U where the Math and Science hall is 'the building that never sleeps'.

So the loss of 220 was due to punishment of hams who believe we should retain code testing, and had nothing to do with political maneuvering by UPS or anyone else, and nothing to do with virtual non-use of the band by hams.

In that case we might just as well turn in most of VHF/UHF and get it over with.

And NONE handle FSK nor any other digital mode (except CW) without
external gear equally sohiisticated as the rig itself. That should not
be, but is evidence of what the marketplace evidently wants to pay for.
If demand was there surely vendors would build it in.

None I know of comes with a code key.

 No, he can't and no one else can, either. As a longtime message handler
using voice, I can affirm that delivering voice HAD BETTER be slow and
distinctly enunciated if it you don't expect to have to repeat, and more
than once.

My point exactly.

> Why should they be satisfied to follow rules and conventions just because
they
> now have gone through a licensing process for ham radio?

My point, Dick, is that the majority of those who want a lawless environment are not choosing to become hams. I think the reasons for my conclusion is best illustrated by a look at those who have received letters from Riley. The majority of them are old time hams, not any that I can identify as former freebanders.

>Are you really so cloistered there at HQ that you don't know any of

>At this point, I'm going to say you've strayed too far into the topic of
>another
>newsgroup - rec.radio.cb, and stop here.

Aw Dieter, the group's talkin'about freebanders, motorcycles, and 'head soaking" under a thread title of "Puke" as well. This is actually kinda nice. It's interesting, it involves helping a fourteen year old girl practice code to becomed a "coded" ham, (How's that for a rare demographic?) and although the opinions differ...nobody's insulting anybody. Altogether a pretty pleasant subject for a holiday weekend, I'd say.

Besides, have you taken a look at rec.radio.cb lately? You know what, I'll post it there just to see what happens. After all, I'm still an 11 meter (legal) supporter. Perhaps, that NG will surprise me. I still answert a few selectively targeted posts there. Thanks Herr Stussy. (Mom's born in Berlin and a close friend of the family's name is Dieter. The Herr thing comes naturally when I see the name.)

Good point. However, not being very familiar with emergency communications, I can't say what percentage of such communications is formal traffic and what percentage is a description of the emergency and a statement of the needs of those in need of rescue.

To get back to the desparate enclave of people needing help, can you offer any indication of what percentage of the communication from such enclaves in the past has been formal and what percentage has taken place at a conversational rate?

The truck-to-train and truck-from-train would be needed anyway. In many cases the rail move can pickup or deliver directly from/to the destination. The rail move is many times more fuel- and pollution-efficient than the road move, and safer as well.

The main advantages of all-road moves are speed and simplicity - the shipper only has to deal with the trucking company. If intermodal were not cost-effective, it would have died out decades ago. That it has survived despite massive government subsidy of the trucking industry shows how efficient it really is.

I can believe that! The Eiro market demands it.

Ahh - and I bet those limits are seriously enforced! Bet their size/weight limits on trucks are way below ours, though.

Cool. And Again, I bet that is enforced seriously.

>
Part of that is probably due to better construction, part to a less severe
climate, and part to lower axle loadings on the big trucks. And better
maintenance. Note that their fuel takes are much higher than ours, so that the
money is there to mainatain the roads.

>> - how good are German drivers compared to Americans?
>

Excellent idea. I have heard that in Sweden (where Volvso are made) you have to
meet certain qualifications to OWN a car. If you can't show that you will
maintain the vehicle, you can't have one.
>
> Of course, in spite of the training, they are much more aggressive

>
Gotta define "aggressive", though. For example, you can't be indecisive about
merging into Autobahn traffic, from your description.

That says a LOT. Changes the mindset of the driving public bigtime.

They limit driving in another way over there. Fuel and vehicle prices. How much of a typical German's wages would be spent to own, say, a Golf compared to an American's?
>
Neat stuff. Note that the Euro rail passenger systems are far more extensive than our own. (But their rail freight is a pale shadow of ours). The French TGV system is the world standard. Tested at 326 mph, in revenue service at 195 mph.

326 mph is not a typo.

True - so they stop 'em all. Or just those who don't have anybody in front of them for a significant distance. Those without detectors get a smile and a "drive safely". Those with detectors get a big fine and the detector confiscated.

> When I am tooling down the highway and see several
>cars in front of me braking, I always slow down a bit -- for a number of good

Yup ;-)

One time a driver I know well was tooling down the 4-lane divided BWP in MD on a Friday evening, doing "about" the 55 limit. (In general, the MD cops wouldn't stop anyone until they exceeded the limit by more than 5-10 mph). He's driving an old multicolored diesel VW in the right lane. (You woulda loved that car, Ed).

Up behind him comes a yuppie in a new Saab. The Saab flashes his lights as he approaches. Yuppie wants the diesel to move LEFT and get out of his way, so he can pass on the wrong side without being bothered to change lanes. (Left lane was wide open - not many cars heading in that direction).

VW doesn't react. Saab flashes again. VW slows down to 55 exactly. Saab flashes again. VW slows to 50. Saab gets pissed, goes into left lane, starts to speed up. VW speeds up too, keeping pace. Saab gets really pissed, punches it, roars off at 85+, over the hill, around the bend and far away.. VW slows down to "about" 55.

Because over the hill and around the next bend are waiting the MD state troopers, and when they see the Saab heading towards them at 87 mph, they are not going to cut any slack. VW waves as he goes past.
>
>A better ploy would be to leave that beacon operating until drivers got used

MD does that, too.

And none handle voice without an external microphone or OOK CW without an external key or paddle.

And Small Wonder's PSK rigs handle PSK-31 directly.

> That should not be, but is evidence of what the marketplace evidently wants
to
> pay for.

Yes, they want to pay for rigs and buy the microphone, key or TNC that it takes to run that rig on the corresponding mode. That does not tell us a thing about how hams should be tested about the worth of that particular mode, does it?

>If demand was there surely vendors would build it in.

Several of the rigs I have seen have built in FSK. Perhaps if you weren't so cloistered out there you would know these things.

I do not make such assertation, Dick.

I have asked what percentage of emergency communications are conducted on CW by necessity, but you are obviously ignoring me and can't answer the question, so that proves all my points. (Just applying the same standards to the discussion as you do, in a hope that we can reach a better understanding if we are speaking the same language.)

If you are not serious enough to care to ask it again, I see little reason to
spend any time on it.  You seem to want people to make "effort" in everything
in life, it would seem.

It would have been a lot easier to simply ask the question rather than your
going off on a diatribe about 8 year old children. With that in mind, it does
not appear to me that you really want an answer at all -- the diatribe is
probably your real intent.

>Please deliver, or I must re-evaluate my opinion of you and
>re-align it with my past experiences with your colleagues.

I think I see a pattern here, Larry.

>...except that you're not going to give them the formula--right?

I think we have lost track of the original thread here, Dave. The premise was that most high school grads could not solve a simple algrebra formula. I disagreed, and proposed a simple test. If you are now saying that the test needs to require them to solve a formula they are not given, I think we have about run this one into the ground.

80-column widths are not standard anymore, Jeff, and are obsolete just
like Morse code testing. You are living in the past. Sorry about that.

You are correct and I will sneak away to lick my wounds, deservedly obtained. In my programming days I bracketed it whether it needed it or not; now I know why.

1. 16 - 3*5
2. 16-15
3. 1

OK, prof???

I had no external box, Dick. It was just a very simple breadboard which I installed *INSIDE* my IC-745. I am considering buying a high end transceiver and one of them that I'm considering has full RTTY capability built in. It's an ICOM but I don't recall the model number.

Dick, I have a question for you. Exactly how many times can you swallow that foot in your mouth without disappearing from the face of the earth?

Earth to Jeffrey: The dictation system used by the secretaries does all
that starting and stopping automatically. And besides, Intel has full
voice recognition and translation available on a desktop PC. It takes
an audio file in and outputs an ASCII text file. Where the heck have
you been all this century?

The point/issue is that the use and reliance on CW has
been of such am unlikly need that knowledge of CW is not
a justifiable test requirement. Any ham should be free to
learn and use CW, but the diminimus anecdotal
reports of actual CW use (still never validated as
to the actual communication being life saving) simply
doesn't sustain any continued mandatory code testing
for ham radio.

>> In that time frame, how many accounts were there of emergency communications

> Bullhockey. Any reference to CW use is routinely ignored by you who
>have an Agenda to discontinue it as a vital mode within ham radio.

The issue is CW TESTING... NOT use.

That was the case until several years ago. The highway funds
are no longer tied to a federal speed limit.

However, I suspect there are documented cases of
sprinklers saving lives and property EVERY DAY. Not
so the case for morse code.

You'd lose. There is no federal preemption to protect you.
The FCC amateur ore-emption applies ONLY to transcievers.
That is why scanners alone aren't exempt for hams.

Additionally, the question still not answered is: Was the nature and
content of the two CW emergency communications of any
consequence as to saving loves and/or property? I don't
recall any reference to that being the case.

Which is exactly why the FCC and other administrations
around the globe do NOT see any need for continued
morse TESTING. If you make a claimed need
for morse testing to ensure morse availabiliy for
emergencies and then you can't sustain the need with
quantifiable data...then you lose the argument. The
burden of proof to retain the requirement has
clearly been put on the pro-code test folks by the FCC
(as well as most entities around the globe).

>Since you
>are a part of the HQ staff it would be far more likely that you could
>get all the facts for yourself if you were intererested in something

Dick...

No one wants to suppress you. The point is that you
don't provide facts when asked about your claims.

>(Just applying the same standards to the discussion
>> as you do, in a hope that we can reach a better understanding if we are
>> speaking the same language.)
>
> No, you apply whatever standard you think will make a point against me,
>swhther or not it is valid. Score means everything.

Agreed... so far the score is:

20 wpm Testing - Ended
13 wpm Testing - Ended
 5 wpm testing - hanging on today by a mere ITU treaty technicality

As to code USE - So far no one has made any pitch to end
the use and I suspect no one will.

Cheers,
Bill K2UNK

If there was any such "resulting accidents" they would
surely have lead to an end of using radar for speed
enforcement. Your friend does what he does to
DELIBERATELY rattle the other driver. BIG difference.

Then he is likly illegal (IMHO).

 Yoiu're a liar again, there has never been an Icom transciever with a
builtin modem.

Don't you ever get tired of lying through your teeth? What does your

Baptist mother think of you doing that? Not that you ever cared.

 I won't do your homework for you. If you're toio stupid to read that's
your problem. There is polenthy of reference to it in the literature.

Who cares about third-world countries? Get with the program, Jeff.
You reside in the US of A. Act like it!

We'll see who's lying, Dick. The IC-756PRO has an FSK modem built in
which includes FSK encoding and decoding and also has PSK31 capability.
Eat crow, Mutha!

So it's OK to rattle the other driver if it's not deliberate?
I've had my radar detector go off in the middle of nowhere.
Who do I blame for that?
